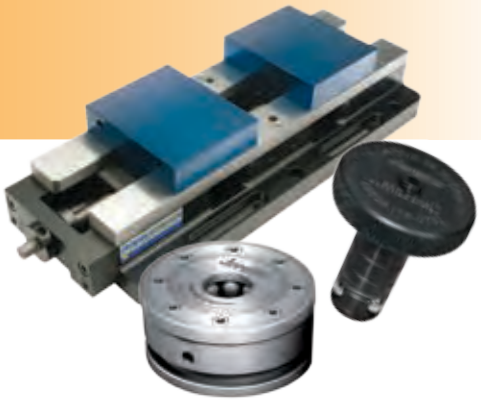
WORKHOLDING SOLUTIONS



SUPPORT, LOCATE AND HOLD:

Jergens Workholding Solutions has all the standard components you need, plus vises and innovative quick change fixturing systems to help you maximize your machine uptime.

QUICK CHANGE FIXTURING 5–62

Jergens is the world leader in quick change fixturing systems that help you maximize efficiency and uptime. These productivity-boosting systems include the Ball Lock® Mounting System and the Zero Point System.

MULTI-AXIS WORKHOLDING 63–102

Jergens Fixture-Pro®, unique, modular workholding system's design offers maximum flexibility. The line has a variety of subplates, risers, quick change pallets, and top tooling to get the spindle and cutting tool close to the workpiece.

PRODUCTION VISES 103-148

With quick-change, machinable jaws and other time-saving features, Jergens vises can integrate with Ball Lock®. Our entire vise line was designed to help you machine more efficiently, saving you time and money on HMCs, VMCs, and 5-axis machines.

POWER CLAMPING 149–216

Durable, reliable clamping solutions from Jergens provide cost-effective performance, with a wide selection of boosters, clamps, cylinders, pumps, swing cylinders, hydraulic controls, and more.

LOCATING COMPONENTS 217–238

Whether you're building your own fixtures or customizing existing workholding devices, Jergens has all the locating components you need to ensure fast, accurate locating.

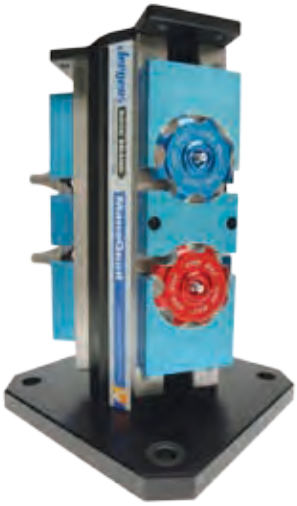
WORKHOLDING COMPONENTS 239–294

With one of the largest selections of workholding components available, Jergens has everything you need to design and build fixtures, jigs, and other workholding devices.

LOW PROFILE CLAMPING 295–342

Jergens offers a wide range of low profile clamping products for your unique applications. Jergens OK-Vise® clamps and Micro™ Clamps bring 3-dimensional machining to your workflow, as well as extend cycle time and provide a more efficient usage of space compared to traditional vises.

What started as a simple component-based business has grown into a full workholding solutions line that includes engineered products to help customers implement lean manufacturing programs. Whether you're looking for a full line of tooling and locating components, vises, power clamps or quick change fixturing solutions, Jergens has the products you need. We back up our products with a quality guarantee, and engineering assistance to help you with your application challenges.



Jergens Company Profile

Jergens Inc. was founded in 1942 by Jack Schron, Sr. and his father Christy, to provide standard components for building jigs and fixtures. Today the fourth generation of family involvement continues stronger than ever. Throughout it's 75-year history the company has grown into four separate operating divisions: Tooling Component Division (TCD), Jergens Industrial Supply (JIS), Acme Industrial Company (AIC), and Advanced Systems Group (ASG) Division of Jergens. While all divisions are vital to the Jergens family, the TCD Division is the centerpiece of our manufacturing capabilities. In June 1999, Jergens moved into a new 110,000 square foot facility and prides itself by manufacturing over 80% of it's product offering, as well as setting the standard for producing the highest quality components in our industry.

Jergens Tooling Component Division comprises three distinct business units: Workholding Solutions, Lifting Solutions and Specialty Fasteners. Building on its reputation of uncompromising quality standards, Jergens is committed to helping its customers achieve leaner, more profitable manufacturing, and continues to add products and engineered solutions for an integrated approach to "Manufacturing Efficiency."

Today, you'll find our tooling components, fasteners and hoist rings at work in just about every industry on every continent. And our innovative Quick Change Workholding Solutions like Ball Lock® Mounting System, Fixture-Pro® 5-Axis Workholding and Zero Point Systems have changed the way manufacturers worldwide think about productivity.

Jergens actively supports global, multinational and internationally based customers with metric dimensioned product offerings as well as many inch threaded products that are common in aerospace and industrial applications around the world. In important manufacturing markets in Canada, Europe, Asia and Latin America, Jergens representatives and stocking distributors have represented Jergens for more than 30 years. Our international representatives are trained technically on our products and provide expertise to customers and sub dealers in applying Jergens technologies to local industries. In recent years, two wholly owned affiliates were formed to serve the Chinese and Indian markets. Jergens (Shanghai) Commercial Co., Ltd, opened in 2006 and Jergens India Private Ltd., Navi Mumbai India opened in 2009. These fully registered trading subsidiaries employ trained multi-lingual engineers and commercial managers who provide marketing and importing, warehousing, distribution and technical support to our customers, distributors and local representatives.

Additionally, we offer a wide range of metalworking tools, clamps, and supplies to manufacturers in Northeastern Ohio, through our JIS Division. Acme Industrial, located in Carpentersville, Illinois, is a premium manufacturer of precision drill bushings and keylocking thread inserts. Our ASG Division specializes in products for light assembly ranging from torque-controlled electric screwdrivers to automation systems.

In addition to our unique product designs, we lead the industry with unparalleled customer service and delivery. Our website is a good example of our commitment to be the most innovative company in our industry. Customers and distributors can check stock and order on-line, view the Jergens catalog, and even download 2D, 3D and solid model CAD drawings in a variety of formats. Visit our website at www.jergensinc.com for the latest news and product information, as well as links to our other divisions. The Jergens family thanks you for your business.

Distribution of Jergens Products
Jergens is proud to be represented by a network of qualified distributors throughout the world. If you do not know the name of the distributor nearest you, please call Jergens Customer Service at 1-877-486-1454 or visit www.jergensinc.com.

Quality Policy
Jergens, Inc. manufactures and supplies only *quality* products. Our quality system is ISO 9001: 2008 Certified. Center-Pull and Side-Pull Hoist Rings are CE Certified. If there is a problem with any of our products, please contact your local Jergens Distributor or contact our Customer Service Department.

Design Aids
Jergens, Inc. offers several CAD drawing formats for use in fixture design. Our internet site (www.jergensinc.com) offers our complete catalog with links to CAD drawings on most of our products. We also offer 3D solid models of our products via the internet.

Application Assistance
Jergens Inc. maintains a complete Technical Sales Department to work with you. Please feel free to call upon their knowledge and experience. Application videos are available for the Ball Lock® Mounting System, Fixture-Pro® 5-Axis and Hydraulic Vise Column products at www.jergensinc.com or you tube channel.

Engineering Changes
Product improvement is a continuing process at Jergens, Inc. Specifications and engineering data are subject to change without notice. **If current information is critical to your design, it is suggested that you contact the Jergens Customer Service Department, or download the most current drawing from our website*, to verify any dimensions or specifications**.

Bar Coding
Jergens' boxed and bagged products are fully bar coded for automatic identification. The bar code labels contain the ASCII Code 39 format, which was chosen as being suitable for most bar code readers. Jergens' bar codes will identify part numbers and manufacturer's codes.

Specials
Jergens, Inc. will modify any item that is similar to our standard component parts. Please contact your Jergens Distributor with your request for a quote. Prints or sketches should be furnished if possible.

TCMA Standards
Products throughout this catalog meet the standards of the Tooling Component Manufacturers' Association. The items are asterisked and are interchangeable with other tooling component manufacturer's products.

Material and Finish Specifications
Stressproof®: A severely cold worked, furnace treated steel bar. Produced by LaSalle patented process to obtain high strength, free machinability, good wear, and minimum warpage in the bar.

Alloy Steel - 4140 or equivalent

Low Carbon Steel - Free Machining 1215, 1018, or equivalent

52100: QQS-624

Zinc Plate: ASTM B633, Type III, Class FE/ZN 5

Cadmium Plate: AMS-QQ-P-416, Class 3, Type 1 & Type 2

Black Oxide: MIL-DTL-13924 and AMS-2485

Black Anodize: per Mil. Spec. MIL-A-8625, Type II, Class 2 and AMS-2472

Passivate: AMS 2700

Alternate Finishes available upon request.

Jergens® MANUFACTURING EFFICIENCY

We Put It All Together… In Seconds.

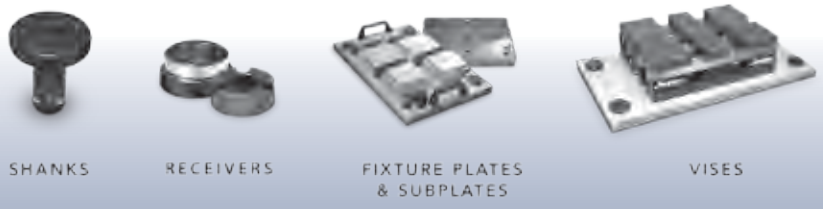
Jergens BALL LOCK® MOUNTING SYSTEM

Maximize productivity levels and dramatically increase throughput with Ball Lock®.

Looking to realize the full benefits of lean manufacturing? Then you need the one system that puts it all together, so you can put it all together…and that's Ball Lock®.

Ball Lock® is the industry's most popular quick-change, fixturing-flexible mounting system that can be configured to create lean-optimized solutions for your most demanding needs.

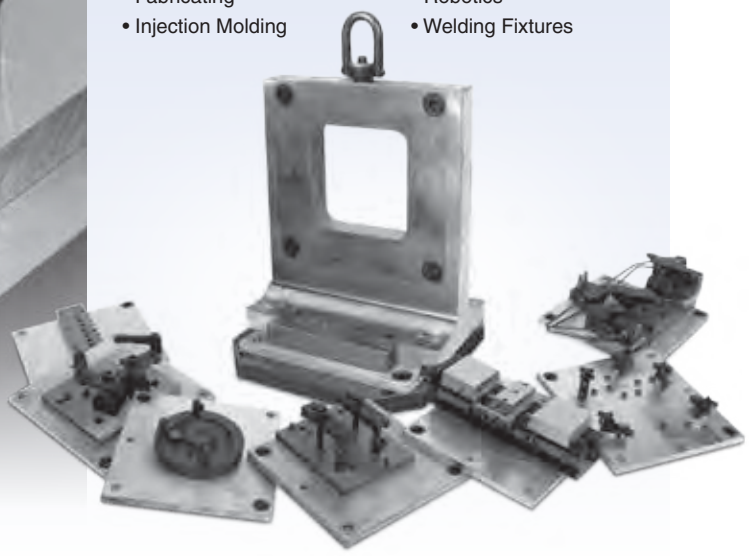
The original quick change system for fast set-ups and machine changeover.



SHANKS | RECEIVERS | FIXTURE PLATES & SUBPLATES | VISES

The Ball Lock® Mounting System is used as a Quick Change Solution on the following:

- CNC Machines
- Palletized Fixtures
- Stamping
- Fabricating
- Injection Molding
- Packaging Machines
- Assembly Machines
- EDM
- Robotics
- Welding Fixtures



Lean Manufacturing and Set Up Reduction Applications

Accurately Locate and Lock Fixture Plates to Subplates in Seconds… With No Indicating Required.

Machining Cast Part

Previous Set Up Method:
Located part with dowel pins, bolted part to tombstone fixture. Indicated part to zero datum point.

Set Up Using Ball Lock® System:
Mount parts to fixture plate while machining other parts. Mount fixture plate to tombstone using Ball Lock® shanks. No indicating required because system provides ±0.0005 (±0.013mm)repeatability.

Previous Set-Up Time:
15 minutes

Set Up Time With Ball Lock® System:
60 seconds

CNC Machine Base:

Drilling and reaming forged part.

Previous Set Up Method:
Fixture plate located with dowel pins bolted to machine base. Fixture plate and parts indicated.

Set Up Using Ball Lock® System:
Parts are pre-mounted on fixture plate, which is then mounted to machine base using Ball Lock® shanks. No need to indicate.

Previous Set Up Time:
7 minutes

Set Up Time with Ball Lock® System:
60 seconds

CNC Vertical Machining Center

Machining aircraft valve parts

Previous Set Up Method: New Project. New Machine.No Prior History.

Set Up Using Ball Lock® System: Using Ball Lock® Jig Saw Plate on Multi-Purpose Subplate enables operator to mount two more vises on the fixture. No indicating needed.

Previous Set Up Time:
New Set Up.

Set Up Time With Ball Lock® System:
80 seconds setting up six vises.

Two-Sided Tombstone

Drilling and tapping cylindrical bodies.

Previous Set Up Method:
Fixture located and bolted to tombstone. Had to be indicated.

Set Up Using Ball Lock® System:
Fixture plate mounted and located with Ball Lock® shanks. No need to indicate.

Previous Set Up Time:
12 minutes

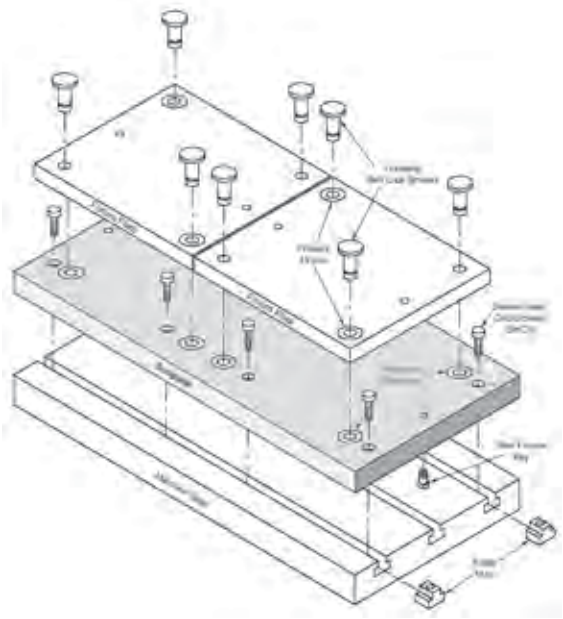
Set Up Time with Ball Lock® System:
45 seconds

Locates

The Ball Lock® System accurately positions your fixtureplate with a repeatability of ±0.0005" (±0.013mm) or better, minimizing the need to indicate your fixture.

Locks

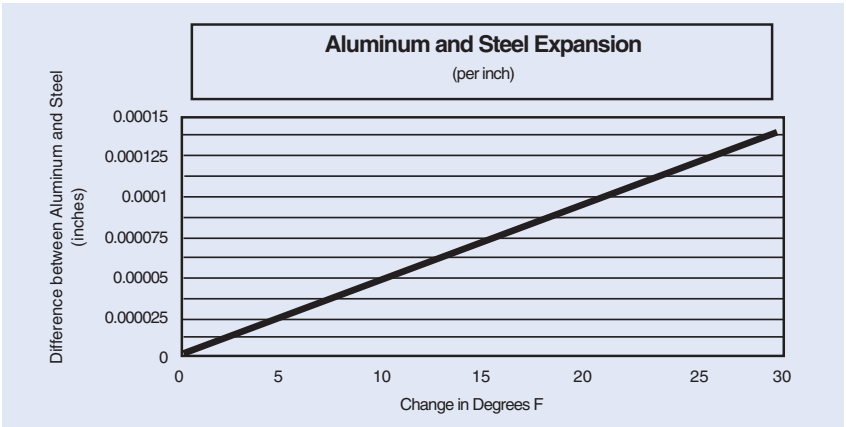
The Ball Lock® System securely holds fixture plates to subplates with up to 20,000 lbs. (9000 Kg) of hold-down force per shank.



The Ball Lock® Mounting System is designed to speed the accurate locating and locking of fixture plates to subplates. The system consists of three parts: a Locating Shank, a Liner Bushing, and a Receiver Bushing. Using the Ball Lock® Mounting System is a simple process: Install a subplate with receiver bushings on your machine table; add your fixture plate with two locating liner bushings; then insert two locating shanks through the liners and into the receiver bushings to provide accurate location. 2$^{1}/_{2}$ turns of the set screw in each of the locating shanks provides positive holding force. Additional Ball Lock® Shanks are inserted through clearance holes in the fixture plate and set screws tightened for additional holding force distributed across the fixture plate.

It is recommended that the use of the Ball Lock® Mounting System for locating and clamping of fixture plates be incorporated in a systematic process. All fixture plates should have two locating points positioned as far apart as possible. There

The Ball Lock® Mounting System provides a method of quickly and accurately locating fixtures onto machine tables. The Ball Lock® Mounting System has done for machining centers what the Japanese SMED concept did for presses. Instead of single minute exchange of dies, Ball Lock® provides single minute exchange of fixtures. Fixtures can often be exchanged in less than a minute and with position repeatability of ±0.0005" (±0.013mm). Fixtures can be exchanged between different machines when both are using the Jergens Ball Lock® Mounting System.



NOTE: Aluminum and steel expand at different rates. Please take this information into consideration when creating your own Ball Lock® fixture and subplates.

Commonly Asked Questions

Q. What is the Ball Lock® Mounting System?

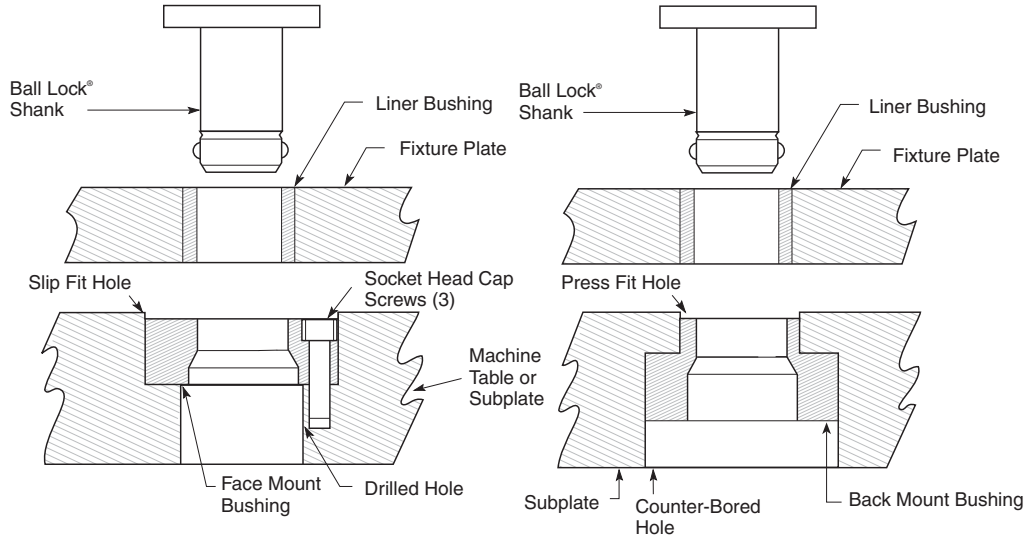
A. It is a means of locating and locking two flat surfaces together, normally a fixture plate and a sub-plate.

Q. How does it locate?

A. Similar to locating pins, two Ball Lock® shanks (pins) pass through two precision liner bushings on the fixture plate and into two precision receiver bushings on the subplate.

Q. How does it lock?

A. Inside the shank are three balls that expand into a tapered groove in the receiver bushing. This action draws the plates together. The locking balls are activated by turning a setscrew in the head of the shank, which pushes a 4th ball to distribute the clamping forces between the 3 locking balls.



Mounting Method With Face Mount Bushing

Mounting Method With Back Mount Bushing

is no advantage to having more than two locating points. If more than two flanged shanks are required to provide additional hold- down force, omit liner bushings in the additional holes in the fixture plate and allow 0.030" (0.76mm) over the nominal size. The additional clearance will insure that these holes have no influence on the locating holes.

How accurate should positioning be?
The center distance of the receiver bushings in the machine table, tombstone, or subplate should be as accurate as possible ±0.0002" (±0.005mm) recommended. Accurate location will assure interchangeability of numerous fixture plates. For accurate repeatability within ±0.0005" (±0.013mm) of true position, both liner bushings in the fixture plate should be *primary* liners and the center distance tolerance should be ±0.0002" (±0.005mm). For a slightly looser fit, repeatability within ±0.0015" (±0.04mm) of true position, use one *primary* and one *secondary* liner with a center distance tolerance of ±0.001" (±0.03mm).

Q. How many shanks are required to locate and lock each fixture?
A. Only two shanks, passing through bushings in the fixture plates, are required for location. However, additional shanks passing through clearance holes in the fixture plate will provide additional holding force distributed across the plate.

Q. Is there a preferable location for the liner bushing?
A. System repeatability is improved if the liners are located at opposite corners of a rectangular fixture plate. For consistency, we recommend locating the liner bushings at top left and bottom right.

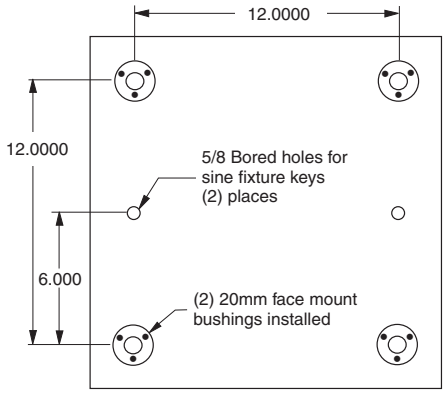
Q. What are the advantages of using the Ball Lock® System over the conventional method of dowel pins and cap screws?
A. Both locating and locking are accomplished in the same motion. Ball Lock® shanks require only 2.5 turns to lock a 1/2–13 (M12) screw with ¾" (18mm) of thread engagement require 10 turns to lock. On CNC machines, the repeatability of fixture locations makes indicating of the fixture unnecessary.

Q. How do I recess the fixtureplate for a clear surface?
A. Counterbore the fixture plate to a diameter large enough to allow easy removal of the shank.
Note: The thickness of the plate section under the head of the shank is critical and must conform to mounting instructions .

Q. What if my plate is thinner than the recommended thickness?
A. By adjusting the depth of the counterbore for the receiver bushing in the subplate, you can still use the Ball Lock® System. If there are any questions on this type of application, please call 1-877-426-2504.

Q. Can I use the shanks in a heated environment?
A. The shank is made of alloy steel, heat treated to 40-45 Rc and should with stand temperatures up to 400°F.(200°C).
Note: Thermal expansion of fixture plates may affect the center distance tolerance and repeatability.

Ball Lock® Standard Subplates

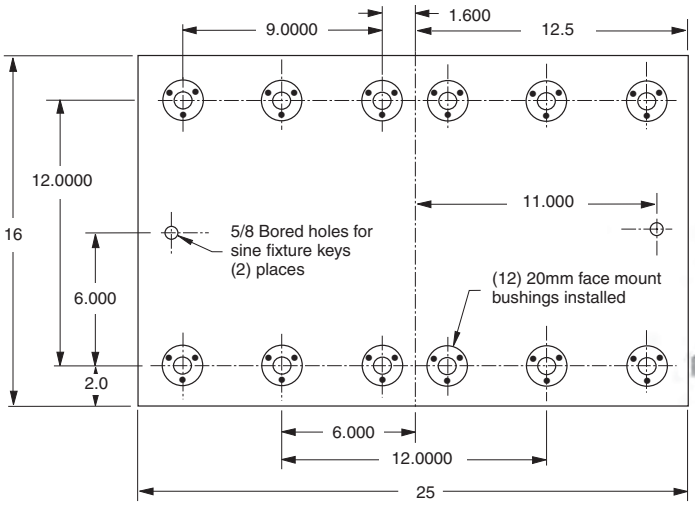


16x16 Subplate

Part Number	Wt (lbs)
49101	81

Equipped with four 20mm receiver bushings for use with 14x14 or 16x16 fixture plates. Ideal for horizontal machining centers or multiple pallet machining centers.

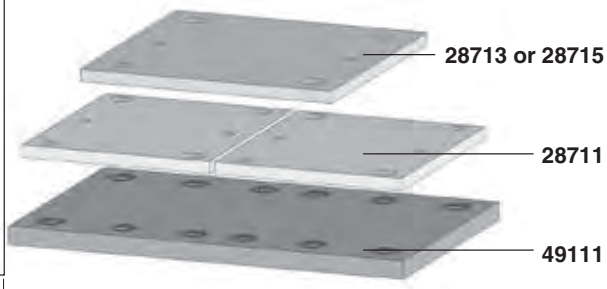
- Fremax™ 15 steel plate or equivalent
- Thickness: 1-1/8" ±0.005"
- Parallel within 0.001"



Aluminum Plate Part Number	Steel Plate Part Number	Number of Fixture Plates	Plate Width and Length
28713	28813	1	14"x14"
28715	28815	1	16"x16"
28711	28811	2	12"x14"

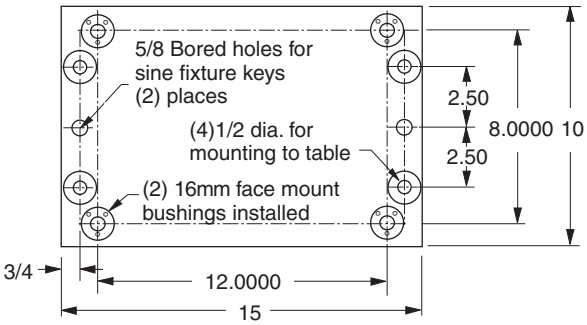
25x16 Dual Station Subplate

Part Number	Wt (lbs)
49111	128



Equipped with twelve installed 20mm receiver bushings to easily locate and mount Jergens Standard Fixture Plates:

- Fremax™ 15 steel plate or equivalent
- Thickness: 1-1/8" ±0.005"
- Parallel within 0.001"



15x10 Bridgeport™ – Style Subplate

Part Number	Wt (lbs)
49121	32

Equipped with four installed 16mm receiver bushings and 1/2" mounting holes. Used with the Bridgeport™ style fixture plates 28731 or 28831.

- Thickness: 3/4" ±0.005"
- Parallel within 0.001"

Ball Lock® Quick Change Kits include all components needed in a single package. See page 26 for details.

Multi-Purpose Subplates

40x20 Multi-Purpose Subplate

Part Number	Wt. (lbs)
49112	285

The Jergens Multi-Purpose Subplate accommodates a wide variety of fixture plates and vises. This versatility facilitates using the same VMC for diverse products in repetitive runs, long and short batch sizes.

- FreMax™ 15 Steel or Equivalent
- Thickness: 1 1/4" ±0.005"
- Parallel within 0.001"

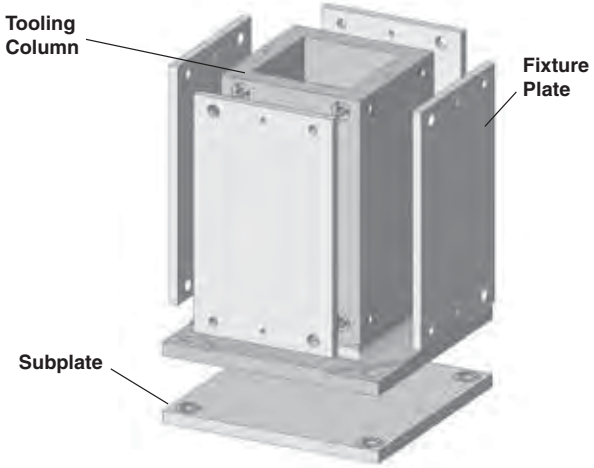
Ball Lock® 4-Sided Tooling Columns

- Class 40 Cast Iron
- Also available in Aluminum
- Ball Lock® Receiver Bushings and Liners installed
- Provides accurate fixturing base for CNC machining centers
- Perpendicularity is 0.001" per foot

Custom Sizes Available with or without Ball Lock®
We are able to quote you on your special requirement with or without the Ball Lock® Mounting System. Call 1-877-426-2504 for design specification information.



See page 18 for Fixture Plates and Subplates

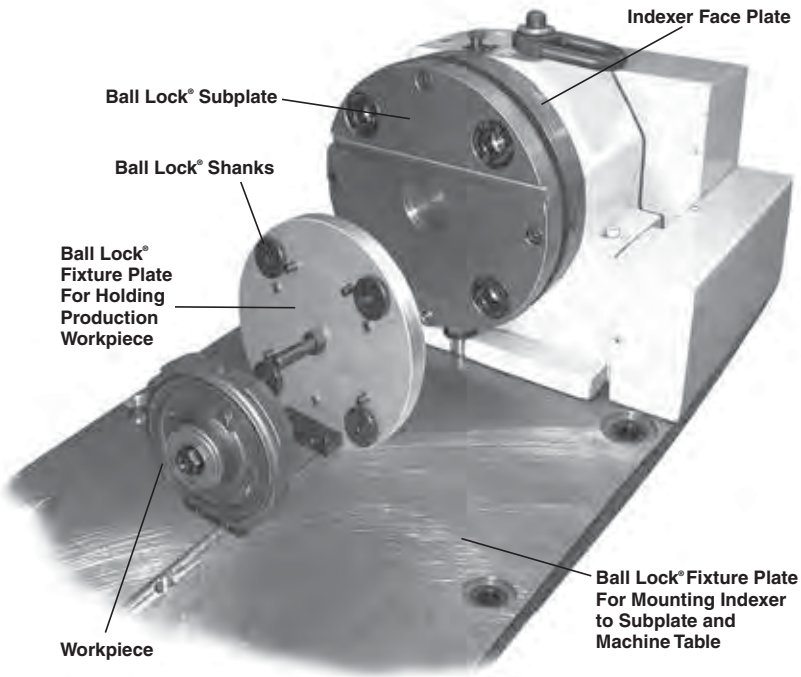
Ball Lock® For 4th Axis Rotary Indexers



Problem:
Rotary indexers increase the versatility of vertical machining centers, yet they offer one major challenge: set-up is so time-consuming that it may limit a machine's flexibility. In many cases, machinists dedicate their 4th Axis tool to a single machine to avoid the agony of an extended set-up and changeover.

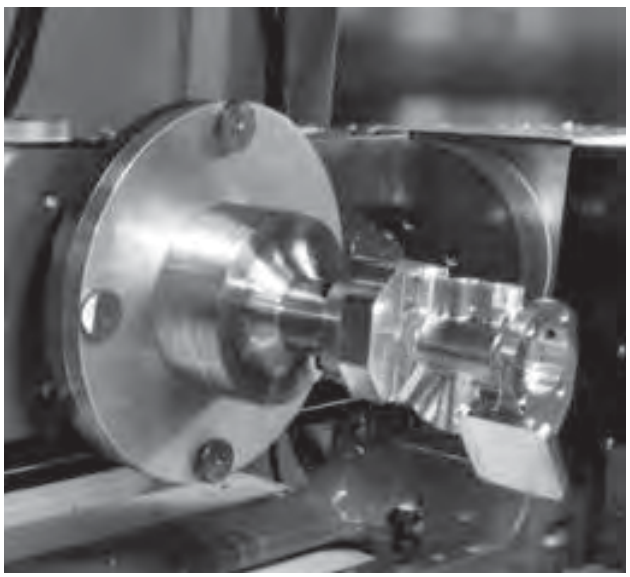
Benefits:
- Maximize indexer utilization
- Eliminate lengthy set-ups
- Accurate fixture plate changover in seconds

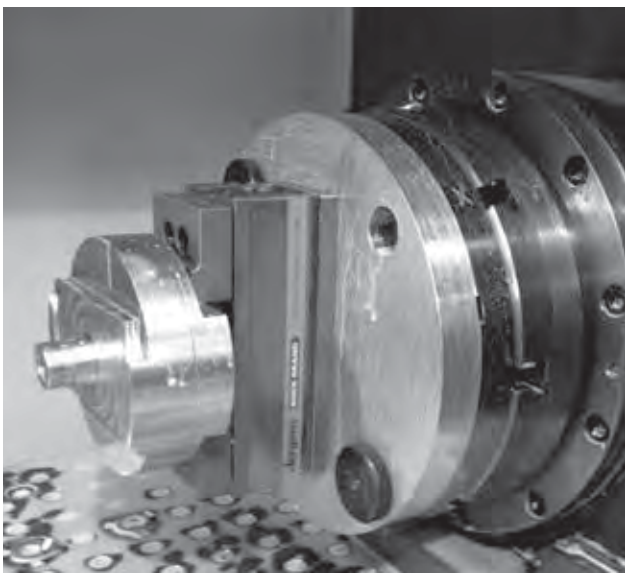
Jergens' Solution:
Ball Lock® Mounting System for Indexers provides a double solution.

First, Ball Lock® mounting plates free up your machine for additional work by allowing a fast and accurate installation and removal of the complete indexer. Avoid hours of set up. The Ball Lock® System does it in minutes, with repeatability at ±0.0005" (±0.013mm). Low profile, positive clamping, proven in over many years of field use.

Second, the Ball Lock® System provides your fixture plate changeover. By mounting the round subplate to the indexer faceplate, you'll "plug-in" new fixtures in record time (less than 60 seconds).

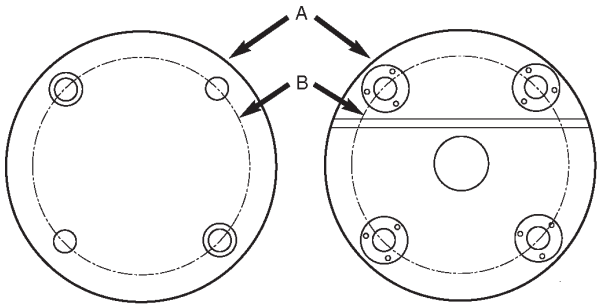
Subplates and fixture plates come with bushings pre-installed.





Round Ball Lock® Fixture Plates and Subplates

Standard Round



Fixture Plate Subplate

Cast Aluminum, FreeMax™ or Steel equivalent

Fixture Plate

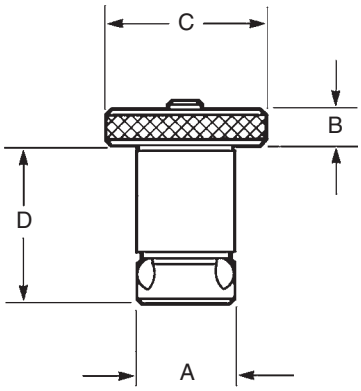
Locating and Clamping Shanks

- Material: Shank/Bushing, 4340
  Liner, 52100
- Finish: Black Oxide
- Heat Treat: Shanks, RC 40-45
  Bushings, RC 50-54
  Liners, RC 62-64
- Operating Temperature Range
  -20° to 400°F, -30° to 200°C

**Stainless Steel available.
See Page 23-24**



Ball Lock® Repair Kits

Each Kit Includes:
- Replacement Screw
- Locking Balls
- Drive Ball
- O-Ring

Any Ball Lock® application requires at least two sets of shanks, receiver bushings and liners. The liners are placed into the fixture plate to insure extremely accurate positioning. If more than two shanks are required (to provide additional hold down force), omit the liner bushing so that these additional holes will not interfere with your primary locating holes.

See page 25 for Fast Acting Shanks.

Receiver Bushings

Face Mount

Back Mount

Two styles of receiver bushings are available. Generally, the face mount receiver bushing is utilized in blind hole applications (Slip Fit). The back mount receiver bushing is used in through hole applications (Light Press Fit).

Note: Installed bushings should be approximately .012" below subplate surface.
See reference below for installation of back mount style bushings.

Liner Bushings for Fixture Plates

Locating repeatability will determine if one primary and one secondary or two primary liners are needed. With two primary liners, repeatability of ±0.0005" can be maintained if the two holes for receiver bushings are held to a centerline distance of ±0.0002" tolerance.

Note on Installation of Press Fit Liners & Back Mount Style Receiver Bushings:
To alleviate the possibility of binding the shank in the bore, the maximum interference fit between bore and bushing O.D. should not exceed .0005".

Stainless Steel Liner Bushings for Fixture Plates

Locating repeatability will determine if one primary and one secondary or two primary liners are needed. With two primary liners, repeatability of ±0.0005" can be maintained if the two holes for receiver bushings are held to a centerline distance of ±0.0002" tolerance.

Note on Installation of Press Fit Liners & Back Mount Style Receiver Bushings:
To alleviate the possibility of binding the shank in the bore, the maximum interference fit between bore and bushing O.D. should not exceed .0005".

- Fast acting thumb screws 2 1/2 turns. No tools needed.

Thumb Screw

- Handle can be moved out of the work area to avoid interference.

Adjustable Handle

Quick Change Kits

The Jergens Ball Lock® Quick Change Kits speed fixture changeover in all types of manufacturing operations. Each kit includes two aluminum fixture plates with two primary liner bushings installed; one steel subplate with receiver bushings installed, and four 20mm Ball Lock® shanks with working loads of 3000 lbs. each. While one fixture plate is on the machine, the operator can load parts on the other. This minimizes downtime for true set-up reduction. To enable the subplate to be mounted on a slotted table without the need to indicate the subplate, sine fixture keys can be used. The sine fixture key bored holes are oriented parallel to the receiver bushings on the subplate and to the liner bushings on the fixture plate. These also allow the fixture plate to be mounted on a toolroom mill without the need to indicate it. This is extremely useful when machining location points on your fixture.

Jergens BALL LOCK MOUNTING SYSTEM

Everything You Need to Change Fixtures in Less Than One Minute

We Put It All Together… In Seconds.

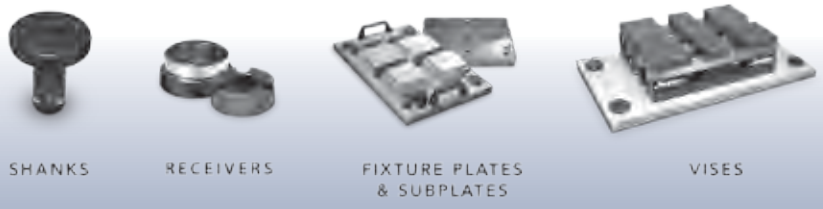
Jergens BALL LOCK® MOUNTING SYSTEM METRIC

Maximize productivity levels and dramatically increase throughput with Ball Lock®.

Looking to realize the full benefits of lean manufacturing? Then you need the one system that puts it all together, so you can put it all together…and that's Ball Lock®.

Ball Lock® is the industry's most popular quick-change, fixturing-flexible mounting system that can be configured to create lean-optimized solutions for your most demanding needs.

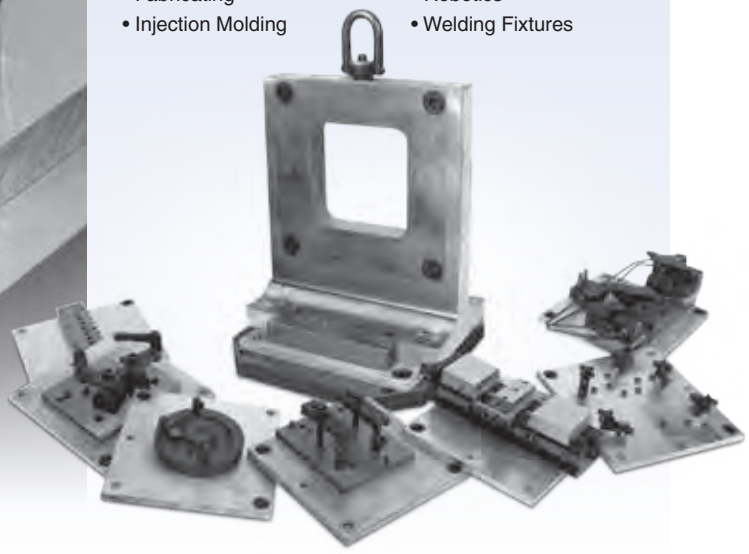
The original quick change system for fast set-ups and machine changeover.



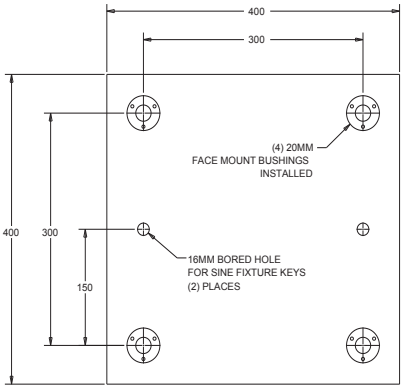
SHANKS | RECEIVERS | FIXTURE PLATES & SUBPLATES | VISES

The Ball Lock® Mounting System is used as a Quick Change Solution on the following:

- CNC Machines
- Palletized Fixtures
- Stamping
- Fabricating
- Injection Molding
- Packaging Machines
- Assembly Machines
- EDM
- Robotics
- Welding Fixtures



Pre-Machined Ball Lock® Steel Subplate

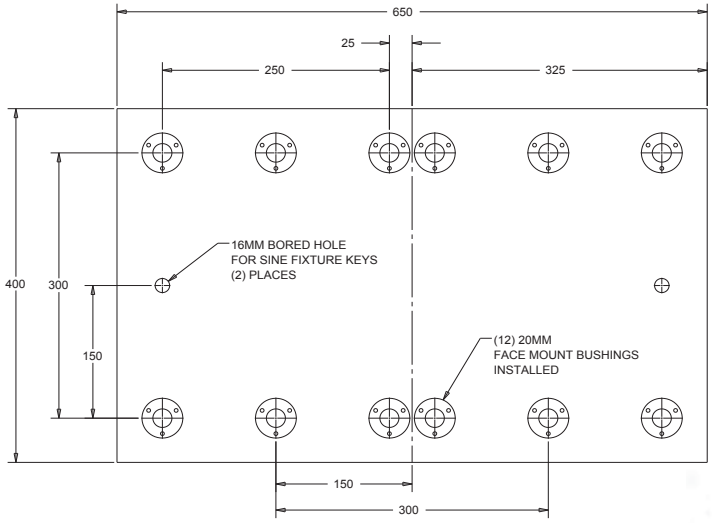


400 x400 Subplate

Part Number	Wt. (Kg)
59101	37

Equipped with four 20mm receiver bushings for use with 350x350 or 400x400 (mm) fixture plates. Ideal for horizontal machining centers or multiple pallet machining centers.

- FreMax™ 15 steel plate or equivalent
- Thickness: 28.57mm ±0.13mm
- Parallel within 0.025mm



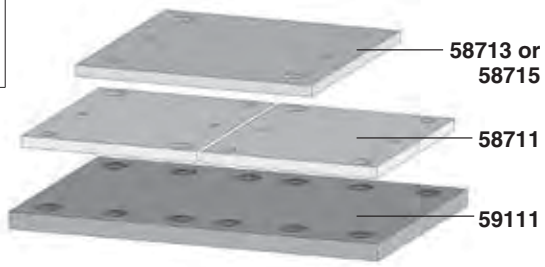
650x400 Dual Station Subplate

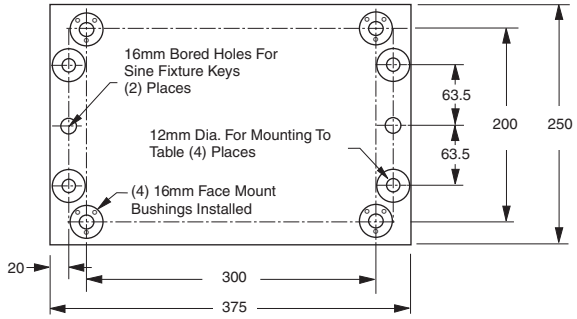
Part Number	Wt. (Kg)
59111	58

Equipped with twelve installed 20mm receiver bushings to easily locate and mount Jergens Standard Fixture Plates.

- Ideal for vertical machining centers
- Thickness: 28.57mm ±0.13mm
- Parallel within 0.025mm

Aluminum Plate Part Number	Steel Plate Part Number	Number of Fixture Plates	Plate Width and Length (mm)
58713	58813	1	350x350
58715	58815	1	400x400
58711	58811	2	300x350





250x375 Bridgeport™ - Style Subplate

Part Number	Wt. (Kg)
59121	15

Equipped with four installed 16mm receiver bushings and 12mm mounting holes. Used with the Bridgeport™ style fixture plates 58731 or 58831.

- Thickness: 19.05mm ±0.13mm
- Parallel within 0.025mm

Ball Lock® Quick Change Kits include all components needed in a single package. See page 43 for details.

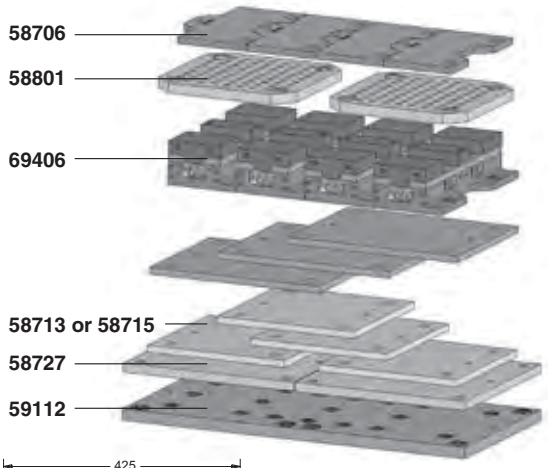
Multi-Purpose Subplates

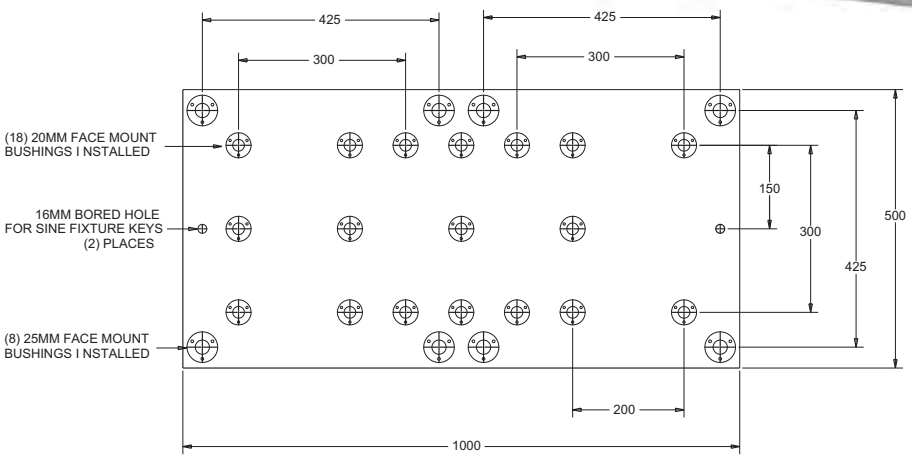
1000x500 Multi-Purpose Subplate

Part Number	Wt. (Kg)
59112	130

The Jergens Multi-Purpose Subplate accommodates a wide variety of fixture plates and vises. This versatility facilitates using the same VMC for diverse products in repetitive runs-long and short batch sizes.

- FreMax™ 15 Steel or Equivalent
- Thickness: 31.75mm ±0.13mm
- Parallel within 0.025mm





Fixture Plate Options for Multi-Purpose Subplates – Aluminum or Steel

Fixture Plate*/Vise Part Number	Thickness of Fixture Plate	Number of Fixture Plates/Vise That Mount on Multi-Purpose Subplate	Receiver Bushing Center Distance	Receiver Bushing Size	Required Ball Lock® Shank Part Number	Number of Shanks Required Per Fixture Plate/Vise
58713 (350 x 350) Fixture Plate	20mm	2	300 x 300	20 mm	**49651**	4
58715 (400 x 400) Fixture Plate	20mm	2	300 x 300	20 mm	**49651**	4

58706 Jigsaw Interlocking Plate	20mm	4	300 x 200	20 mm	**49651**	3
58727 (500 x 500) Fixture Plate	25mm	2	425 x 425	25 mm	**49662**	4
69406 150mm Jigsaw Vise	20mm	4	300 x 200	20 mm	**49651**	3

* See next page for dimensional data on fixture plates. Part numbers shown for aluminum plates, also available in steel.
** Counterbored to 25mm at mounting holes.

Fixture Plates for Use on Multi-Purpose Subplate

350x350x20mm Fixture Plate

Aluminum Plate Part Number	Wt. (Kg)
58713	6

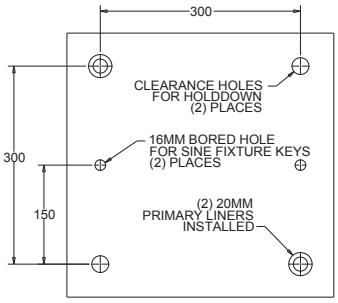
Steel Plate Part Number	Wt. (Kg)
58813	19

400x400 Fixture Plate

Aluminum Plate Part Number	Wt. (Kg)
58715	8

Steel Plate Part Number	Wt. (Kg)
58815	25

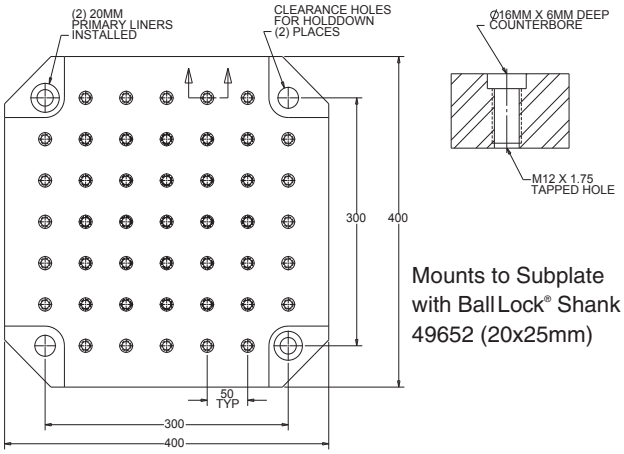
- Cast Aluminum or FreMax™ 15 Steel or equivalent
- Thickness: 20mm ±0.13mm
- Parallel within 0.025mm Steel
- Mounts to subplates with Ball Lock® Shank 49651 (20x20mm)



400x400 Modular Grid Fixture Plate

Aluminum Plate Part Number	Wt. (Kg)
58801	38

- FreMax™ 15 Steel or equivalent
- Thickness: 28.57mm ±0.13mm
- Parallel within 0.025mm Steel



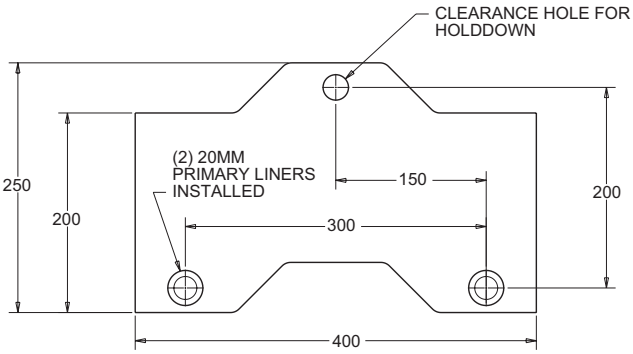
Mounts to Subplate with Ball Lock® Shank 49652 (20x25mm)

Jigsaw Interlocking FixturePlate

Aluminum Plate Part Number	Wt. (Kg)
58706	4

Steel Plate Part Number	Wt. (Kg)
58806	12

- Material: Cast Aluminum or FreMax™ 15 Steel or equivalent
- Thickness: 20mm ±0.13mm
- Parallel within 0.025mm Steel
- For use with narrow base 100mm or 150mm vise models
- Design allows close spacing of vises for more parts per run
- Mounts to Subplates using Ball Lock® Shank 44651 (20x20mm)
- Useful for high density fixturing

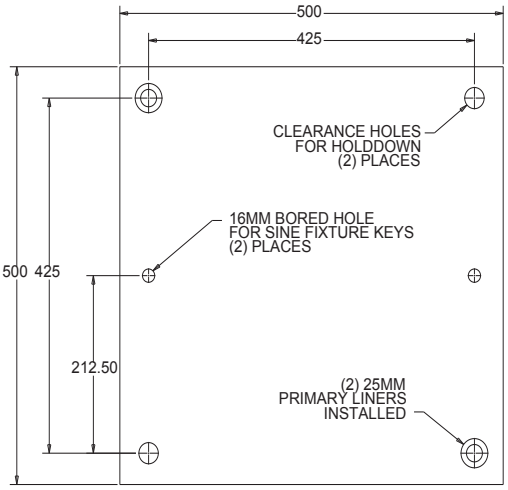


500x500x25mm Fixture Plate

Aluminum Plate Part Number	Wt. (Kg)
58727	17

Steel Plate Part Number	Wt. (Kg)
58827	48

- Cast Aluminum or FreMax™ 15 Steel or equivalent
- Thickness: 25mm ±0.13mm
- Parallel within 0.025mm Steel
- Mounts to Subplates using Ball Lock® Shank 49662 (25x25mm)



Ball Lock® Fixture Plates

- Cast Aluminum; or FreMax™ 15 Steel or equivalent
- Thickness ±0.13mm
- Parallel within .025mm Steel
- 6061–T-651 plates, flat within 0.03mm available upon request

Ball Lock® Fixture Plates with 2 Primary Liners Installed

58731	5	**58831**	15	375 x 250	20	16	**49657**

- Machined to close tolerances
- Repeatability ±0.013mm or better
- Reduces fixture set-up and assembly time
- Provided with 16mm bored holes for sine fixture keys
- For horizontal or vertical machining centers, Tool Room Mills machines, or multiple pallet machining centers

Custom Sizes Available
Jergens will make Ball Lock® fixture plates or subplates to your specifications. Call 1-877-426-2504 for further information.

Pre-Machined Ball Lock® T-Columns

- Class 40 Cast Iron
- Also available in Aluminum
- Ball Lock® Receiver Bushings and Liners installed
- Provides accurate fixturing base for CNC machining centers
- Perpendicularity is 0.025 mm per 250 mm

Custom Sizes Available with or without Ball Lock®
We are able to quote you on your special requirement with or without the Ball Lock® Mounting System.
Call 1-877-426-2504 for design specification information.

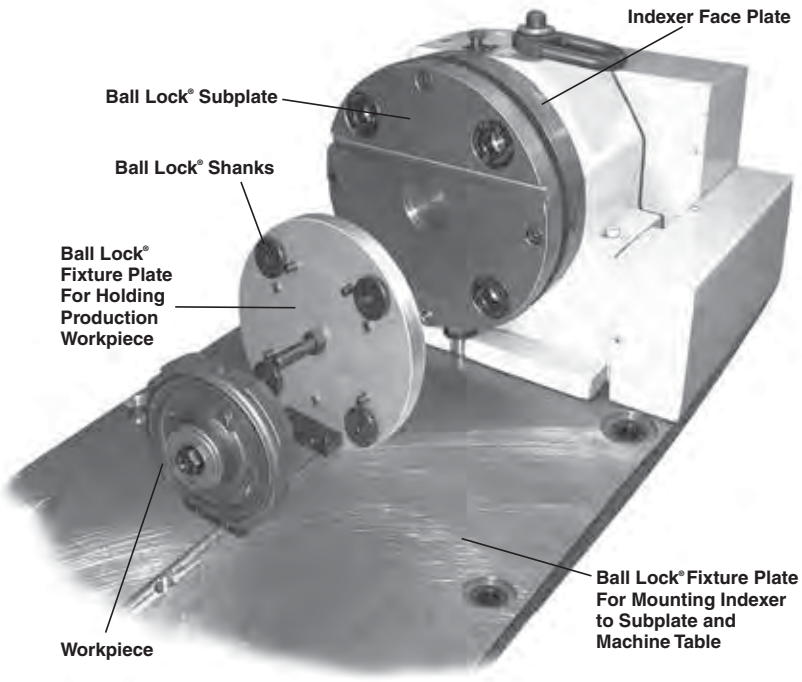
NOTE: Aluminum and steel expand at different rates. Please take this information into consideration when creating your own Ball Lock® fixture and subplates.

Ball Lock® For 4th Axis Rotary Indexers



Problem:
Rotary indexers increase the versatility of vertical machining centers, yet they offer one major challenge: set-up is so time-consuming that it may limit a machine's flexibility. In many cases, machinists dedicate their 4th Axis tool to a single machine to avoid the agony of an extended set-up and changeover.

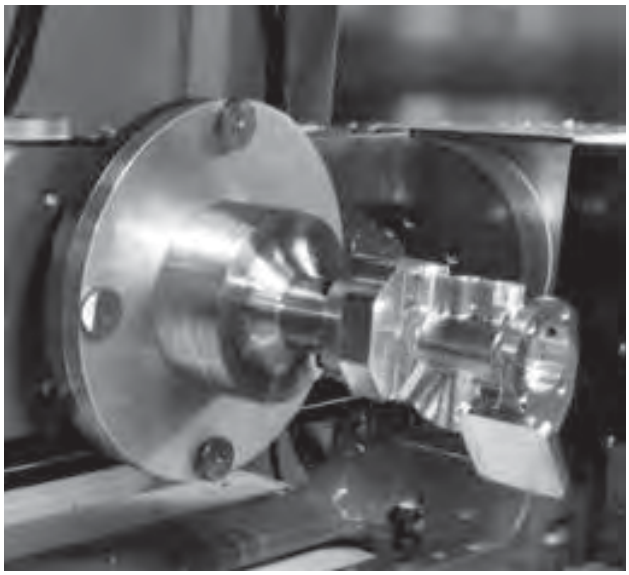
Benefits:
- Maximize indexer utilization
- Eliminate lengthy set-ups
- Accurate fixture plate changover in seconds

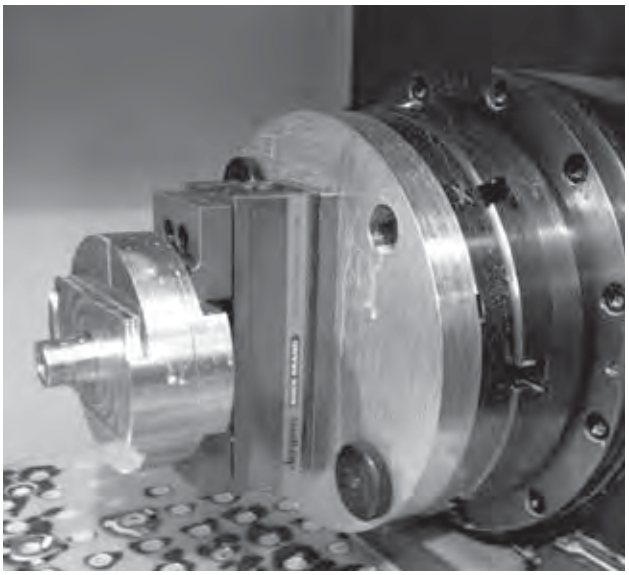
Jergens' Solution:
Ball Lock® Mounting System for Indexers provides a double solution.

First, Ball Lock® mounting plates free up your machine for additional work by allowing a fast and accurate installation and removal of the complete indexer. Avoid hours of set up. The Ball Lock® System does it in minutes, with repeatability at ±0.0005" (±0.013mm). Low profile, positive clamping, proven in over many years of field use.

Second, the Ball Lock® System provides your fixture plate changeover. By mounting the round subplate to the indexer faceplate, you'll "plug-in" new fixtures in record time (less than 60 seconds).

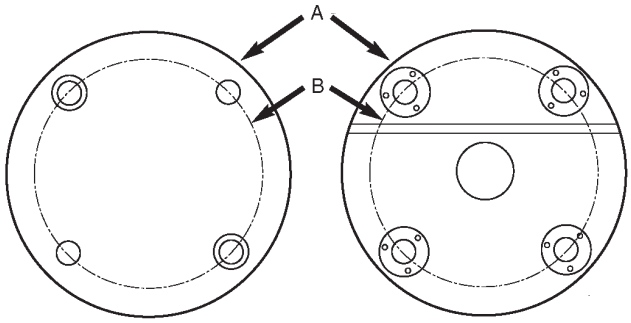
Subplates and fixture plates come with bushings pre-installed.





Round Ball Lock® Fixture Plates and Subplates

Standard Round



Fixture Plate Subplate

Cast Aluminum, FreeMax™ or Steel equivalent

Fixture Plate (mm)

Part No.	A	B	Thickness	Ball Lock® Liner	Ball Lock® Shank	Weight (Kgs)

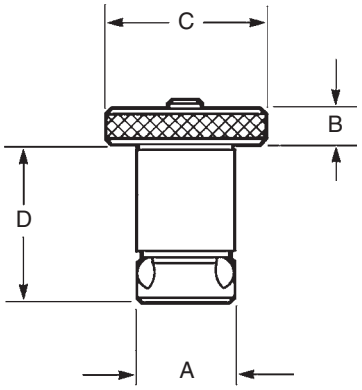
Engineering Changes

Product improvement is a continuing process at Jergens. Specifications and engineering data are subject to change without notice. If current information is critical to your design, it is suggested that you contact Jergens Technical Sales Department to verify any dimensions or specifications.

Locating and Clamping Shanks

U.S. Patents: 3,498,653
4,135,418

- Material: Shank/Bushing, AISI 4340
  Liner, 52100
- Finish: Black Oxide
- Heat Treat: Shanks, RC 40-45
  Bushings, RC 50-54
  Liners, RC 62-64
- Operating Temperature Range: -30°C to 200°C
- Stainless Steel available. See Page 40-41.



Repair Kits

Each Kit Includes:
- Replacement Screw
- Locking Balls
- Drive Ball
- O-Ring

Any Ball Lock® application requires at least two sets of shanks, receiver bushings and liners. The liners are placed into the fixture plate to insure extremely accurate positioning. If more than two shanks are required (to provide additional hold down force), omit the liner bushing so that these additional holes will not interfere with your primary locating holes.

See page 42 for Fast Acting Shanks.

Liner Bushings for Fixture Plates

Locating repeatability will determine if one primary and one secondary or two primary liners are needed. With two primary liners, repeatability of ±0.013 mm can be maintained if the two holes for receiver bushings are held to a centerline distance of ±0.005 mm tolerance.

Note on Installation of Press Fit Liners & Back Mount Style Receiver Bushings:
To alleviate the possibility of binding the shank in the bore, the maximum interference fit between bore and bushing O.D. should not exceed 0.013 mm.

Thumb Screw

- Fast acting thumb screws 2 1/2 turns. No tools needed.

Adjustable Handle

- Handle can be moved out of the work area to avoid interference.

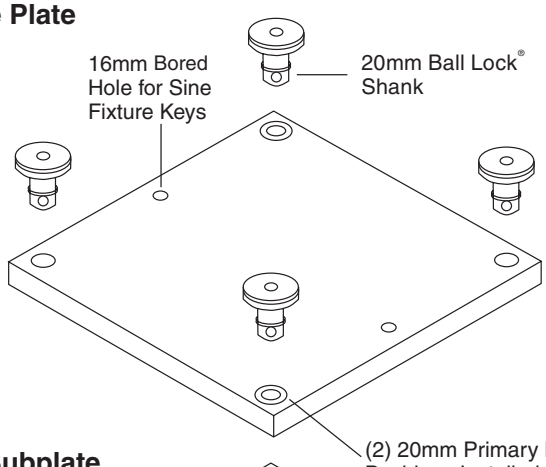
Quick Change Kits

The Jergens Ball Lock® Quick Change Kits speed fixture changeover in all types of manufacturing operations. Each kit includes two aluminum fixture plates with 2 primary liner bushings installed; one steel subplate with receiver bushings installed, and four 20mm Ball Lock® shanks with working loads of 3000 lbs. each. While one fixture plate is on the machine, the operator can load parts on the other. This minimizes downtime for true set-up reduction. To enable the subplate to be mounted on a slotted table without the need to indicate the subplate, sine fixture keys can be used. The sine fixture key reamed holes are oriented parallel to the receiver bushings on the subplate and to the liner bushings on the fixture plate. These also allow the fixture plate to be mounted on a toolroom mill without the need to indicate it. This is extremely useful when machining location points on your fixture.

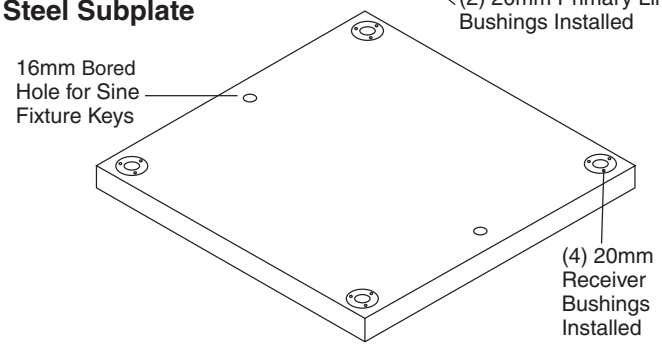
Jergens BALL LOCK MOUNTING SYSTEM

Everything You Need to Change Fixtures in Less Than One Minute

Aluminum Fixture Plate



Steel Subplate



Quick Change Kits

Part No.	Kit Includes
59002	2 - 58715 (400x400x20) aluminum fixture plates with 20mm liner bushings installed
	1 - 59101 (400x400x25) steel subplate with receiver bushings installed
	4 - 20mm Ball Lock® Shanks (49651)

Custom Kits Available

Jergens manufactures ready to use kits including Ball Lock® subplate and fixture plates.

T-slot Width and Center to Center Distance _____

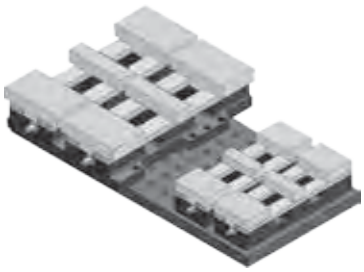
Bock Brand Locator Plate System

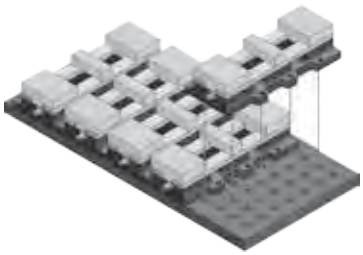
Bock Locator Plates give you the ability to mount and locate Bock Twin Vises, and to change their size, type, number and position in minutes. Using Bock's DexLoc™ Double-Expanding Locator Pins gives you repeatability of +/- .0005".

Bock Locator Plates are made from precision machined aluminum or steel with a grid of locating/mounting holes. Each hole is identified by a letter and a number.

Bock Twin Vises with standard interlocking base gives you great flexibility at tremendous setup speeds while Bock SlimLine Twin Vises give you the possibility to mount vises very close to each other for maximum number of parts in the machine.

Each Locator Plate is custom-made for your particular application. Need a prompt quote? Call (877) 426-2504 with your specifications.





Bock Brand Locator Plates

- Repeat setups to within +/- .001"
- Locator Plates are available in a wide array of sizes, both in inch and metric dimensions.
- Jergens Bock Brand Locator Plates are made of hard coated aluminum for a durable surface
- Alpha-numeric coded holes for an accurate and repeatable baseline reference
- Every hole precision bored to fit Dex-Loc™ locating pins and threaded through for maximum versatility
- Brass protection plugs included for every hole
- Eliminate time consuming "dialing in" for every setup

Part Number	Compatible Machine	Thickness (in)	Size (in)	Material
933804	HAAS VF-2	1.42	14 x 36	Aluminum
933956	Robodrill	1.42	15.35 x 27.5	Aluminum
934204	Mazak VTC200B	1.42	20 x 57.5	Aluminum
934340	HAAS VE-2YT	1.42	18 x 36	Aluminum

DexLoc™ Locator Pins

Patented DexLoc™ double-expanding locator pins allow for fast and accurate location of twin vises on locator plates.

- Self-centering pins relocate within +/- .0005"
- Available in a wide variety of standard sizes and materials

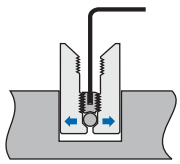
To order DexLoc™ Locator Pins in other sizes, please refer to page 221.

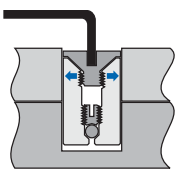
Standard

Part Number	Diameter	Height	Hex Key Size (in) Top	Hex Key Size (in) Bottom
29404	5/8	1-1/4	7/32	3/16

Metric

Part Number	Diameter	Height	Hex Key Size (mm) Top	Hex Key Size (mm) Bottom
29454	16	32	6	5





Features of the Jergens Zero Point Mounting System

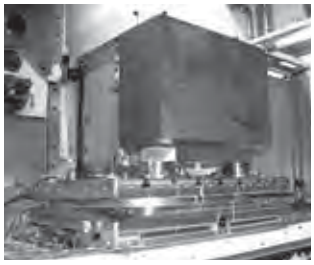
- **Positioning and clamping in one operation**
- **High repeatability and accuracy**
- **Low cost solution for quick pallet changing**

Typical applications for the Jergens Zero Point System:

- Milling
- Assembly
- Welding
- Injection Molding
- Grinding
- Measuring

Jergens ZPS ZERO.POINT.SYSTEM

Pull Studs can also be installed directly into the workpieces, making 5-sided processing possible.



Best results with large and heavy workpieces.

Jergens Zero Point clamping systems are made exclusively of rust-free materials and so are ideally suited for use in the food-service area as well as in the pharmaceutical and chemical industry.

Through different dimensions, the advantage of the Zero Point clamping system are optimally used.

Pull Studs and Engagement Screws

Pages 51–52

- Pull Studs: Hardened Stainless Steel for hydraulic and pneumatic clamping modules.
- Screws: For installation and surface mounting clamping modules.

Clamping Plates with Built-In Modules

Pages 49–50

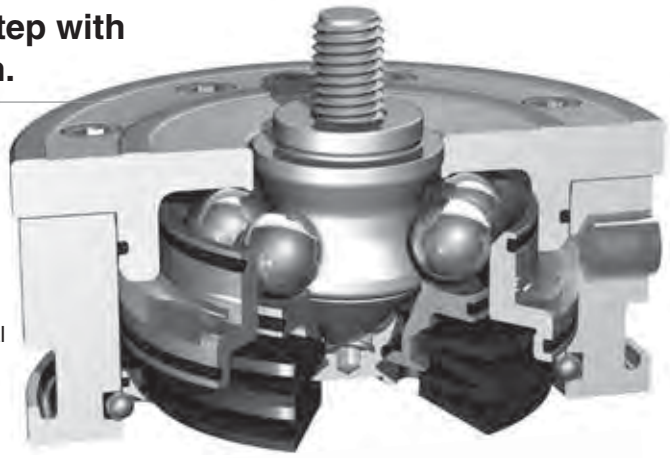
- Ideal when pneumatic and hydraulic connections are not available.

Jergens' Zero Point Mounting System – Cut Set-up Times by Up to 90%.

Fix, Position and Clamp in a Single Step with Jergens' Zero Point Mounting System.



Jergens is proud to introduce the best-engineered Zero Point Mounting System (ZPS) on the market. This revolutionary technology cuts set-up time by up to 90% by combining fixing, positioning and clamping in a single operation. Available with either pneumatic or hydraulic release, these positive locking locating modules allow operators to quickly change out large and small machine fixtures with extreme accuracy and minimal effort. Other features include:

- **Repeatability <0.005mm (0.0002")**
- **Minimizes set-up time**
- **Hardened stainless (AISI 440B) steel construction**
- **Integrated safety system**
- **Compact design**
- **Positive locking**
- **High retaining force**

Pull-in / Locking Force up to 40kN / 9000lbs.

Pull-in / Locking Force up to 20kN / 4530lbs.

Pull-in / Locking Force up to 10kN / 2290lbs.

Pull-in / Locking Force up to 5kN / 1100lbs.

Smart Features for Process Improvement

Reduce set-up times and increase both accuracy and repeatability with design features exclusive to the Jergens ZPS:

Self Guiding

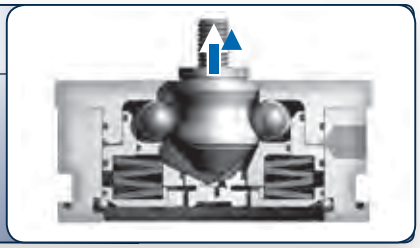
The self-guiding, tapered profile of the mounting stud allows heavy plates to be installed more easily.

Alignment

Unique design eliminates the need for perfect lifts on entry and exit.

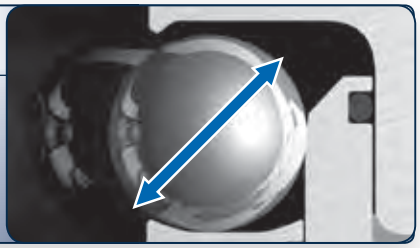
Mechanical Locking System

Experience high holding force without the need to maintain hydraulic pressure.



Large Ball Diameter

Provides increased strength and even load distribution.

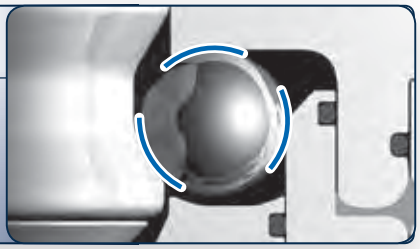


No Ball Cage

Free movement of the bearing balls reduces friction.

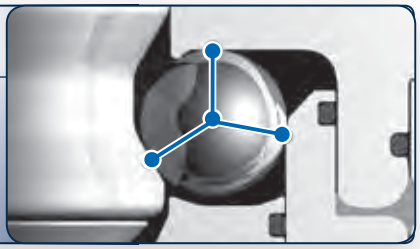
Form Fit Ball Channel

Tapered contact areas eliminate point loads and reduce failures.



Three-Point Load Distribution

Equal load spacing optimizes force distribution.



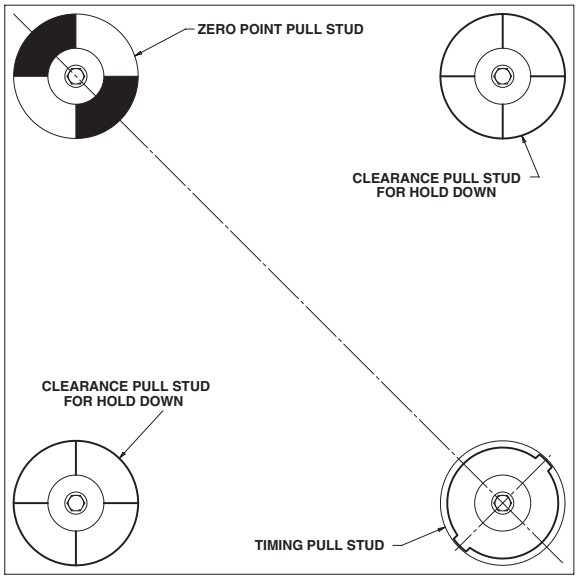
Integrated Safety System

Process-sure clamping module can always be opened, eliminating the need to forcibly remove modules if a failure should occur.

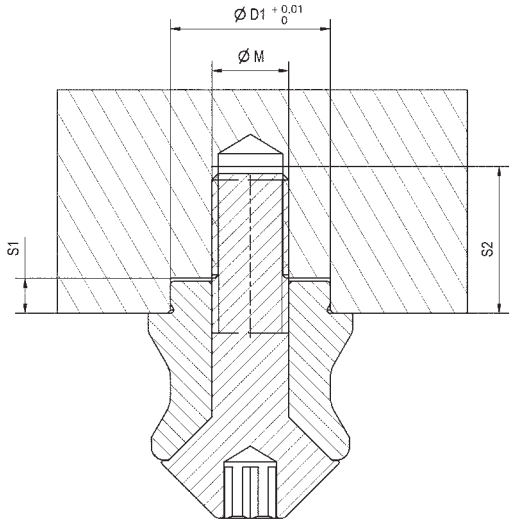
Clamping and Positioning

On each fixture use:

- 1 – Zero Point Pull Stud
- 1 – Timing Pull Stud
- The Zero Point and Timing Stud should be perpendicular
- Use any combination of clearance and/or protection Pull Stud



Dimensions for machining pull stud mountings



Size	ØD1	ØM	S1	S2
K5	10	M6	2.5	12
K10	15	M8	3.5	16
K20	25	M12	5.5	23
K40	25	M16	5.5	30

Note:

- Pull Stud with internal thread for clamping from above
- Pull Studs with different diameter D1, preventing interchange of the Zero Point, timing and clearance Pull Stud during installation.
- Pull Stud for series production, (notch type), Floating Pull Stud for compensation of thermal expansion
- Automatic lifting of the pallet / fixture

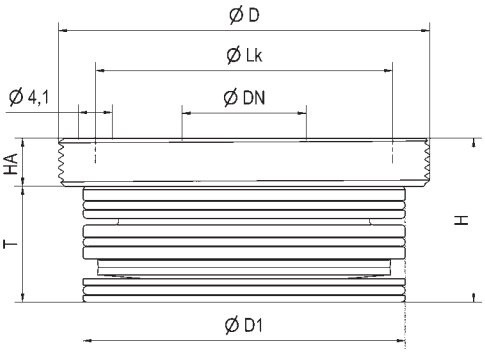
Threaded Clamping Modules (K5)

Screw-In Version
Hydraulic Unlocking

Cover and piston hardened.
Repeatability < 0.005 mm (0.0002")

With a small footprint for installation in base plates, machine tables, clamping profiles, columns and towers, swivel bridges, machine pallets and clamping pallets.

- Installation diagrams on request



Hardened Stainless Steel

Part Number	Size	Pull-In/Locking Force up to kN / (lbs)	Holding Force kN / (lbs)	ØD	ØDN	ØD1	H	HA	ØLK	T	g
480244	K5	5 / (1100)	13 / (2900)	M45 x 1	15	39	19.8	5.8	36	14	300

All linear dimensions in (mm)

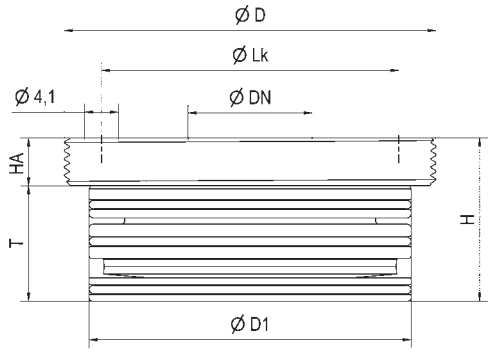
Note: Threaded clamping module with a low installation height of 19.8 mm and an installation diameter of 45 mm (M45 x 1).
Hydraulic supply and pressure is only needed for unclamping (min. 50 bar / 725psi, max. 60 bar / 870psi). The threaded clamping module is mechanically locked in the clamped position. The unique mechanical locking system results in virtually no vibration even with extensive machining forces. Further more, there are no cumbersome lines or dangers of leakage. The contact surface is the upper surface of the housing. The hydraulic design has 1 connection: 1 x unclamping

Screw-in Version
Pneumatic Unlocking

Cover and piston hardened.
Repeatability < 0.005 mm (0.0002")

With a small footprint for installation in base plates, machine tables, clamping profiles, columns and towers, swivel bridges, machine pallets and clamping pallets. Pneumatic modules are optimally suited for use in the food, pharmaceutical and chemical industries, as well as in oil-free applications.

- Installation diagrams on request



Hardened Stainless Steel

Part Number	Size	Pull-In/Locking Force up to kN / (lbs)	Holding Force kN / (lbs)	ØD	ØDN	ØD1	H	HA	ØLK	T	g
480343	K5	1.5 / (330)	13 / (2900)	M45 x 1	15	39	19.8	5.8	36	14	300

All linear dimensions in (mm)

Note: Threaded clamping module with a low installation height of 19.8 mm and an installation diameter of 45 mm (M45 x 1).
Pneumatic pressure is needed for unclamping (min 8 bar/ 116 psi, max 12 bar/ 175 psi). For **clamping** process pneumatic pressure of min 5 bar / 75 psi, max 6 bar / 90 psi is required briefly in order to achieve defined pull-in force. The threaded clamping module is mechanically locked in the clamped position. The unique mechanical locking system results in virtually no vibration even with extensive machining forces. Further more, there are no cumbersome lines or dangers of leakage. The pneumatic design has 2 connections: 1 x unclamping / 1 x clamping.

Installation Clamping Modules (K10, K20, K40)

Hydraulic Unlocking

Cover and piston hardened.
Repeatability < 0.005 mm (0.0002")

With a small foot-print for installation in base plates, machine tables, clamping profiles, columns and towers, swivel bridges, machine pallets and clamping pallets.

Hardened Stainless Steel

Part Number	Size	Pull-In/Locking Force up to kN / (lbs)	Holding Force kN / (lbs)	Blow out	ØD	ØDB	ØDN	HA	K	R	Kg
480665	K10	8 / (1800)	25 / (5620)	Yes	78	77.5	22	30	16.50	G1/8	0.90
480681	K20	17 / (3800)	55 / (12350)	Yes	112	110.0	32	50	28.25	G1/4	2.60
480707	K40	30 / (6700)	105 / (23600)	Yes	148	146.0	40	62	32.50	G1/4	6.40

All linear dimensions in (mm)

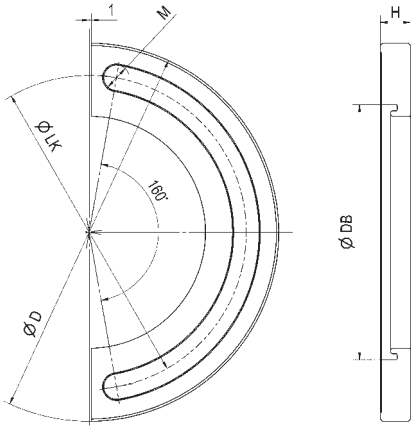
Note: Pneumatic pressure is needed for unclamping (min 8 bar/ 116 psi, max 12 bar/ 175 psi). For **clamping** process pneumatic pressure of min 5 bar / 75 psi, max 6 bar / 90 psi is required briefly in order to achieve defined pull-in force. The installation clamping module is mechanically locked in the clamped position. The unique mechanical locking system results in virtually no vibration even with extensive machining forces. The pneumatic design has 2 connections: 1 x unclamping / 1 x clamping.

Clamping Bracket for Surface/Mounted Clamping Modules

Black Nitrided

Clamping flanges are used to fasten raised/mounted clamping modules on the machine table. See pages 57–58.

- Special clamping flanges for various T-slot tables
- Clamping flange and housing manufactured as a single piece



Stainless Steel

426833	20	2	164	110.0	13.00	136	11.0	400
426841	40	2	202	146.0	16.00	172	13.0	550

All linear dimensions in (mm)

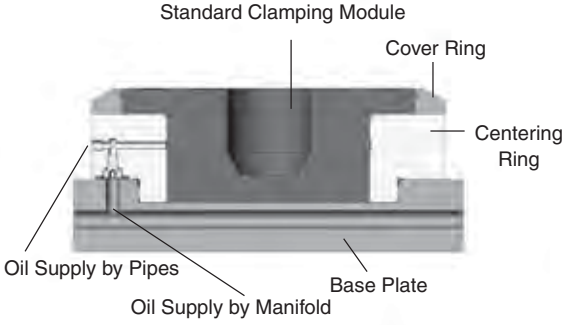
Flange Type Installation Modules with Centering and Cover Rings

Features:

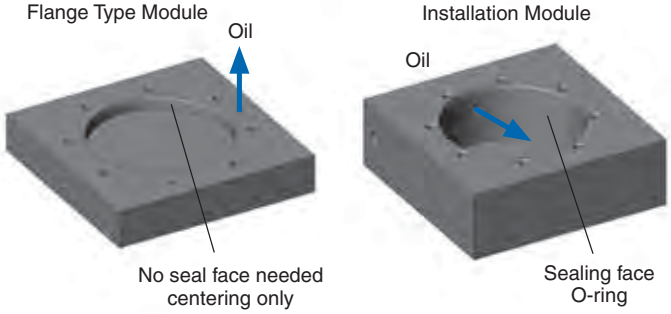
- Oil supply by pipes or manifolds
- Integrated centering
- Provided as assembled unit

Benefits:

- Simple design and manufacturing of adaptor plate
- Weight saving due to less thickness for adaptor plate
- Easy to adapt to existing mounting angles and cubes



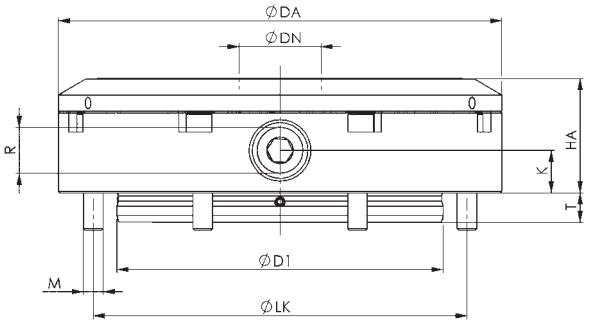
Installation comparison



Flange Type Installation Modules with Centering and Cover Rings

Hydraulic Release

Cover and piston hardened.
Repeatability < 0.005 mm (0.0002")



Hardened Stainless Steel

Part Number	Size	Pull-In/Locking force up to kN / (lbs)	Holding Force kN / (lbs)	Blow out	ØDA	ØDN	ØD1	HA	K	ØLK	M	R	T	Kg
480301	K10	10 / (2250)	25 / (5620)	Yes	100	22	67	24	9	90	M5	G1/8	5.9	1.35

The pneumatic design has 2 connections: 1 x unclamping / 1 x clamping.

Manual ZPS

Ideal when Pneumatic and Hydraulic connections are not available

The manual ZPS modules provide locating and clamping with single bolt actuation. The indexing slots on the face of the modules allow workpieces to be indexed in 90° increments. Indexing slot plugs are available for applications where only specified slots are needed.

- to Mechanical clamping and unclamping
- Quenched and tempered steel
- Repeatability 0.01 mm (0.0004 in.)
- Single Hex Drive Actuation
- Flexible Mounting & Placement
- Two Sizes Available – K10 & K20
- Eliminates Need for Air or Hydraulic Connection

Jergens®
MANUFACTURING EFFICIENCY

Fixture-Pro®: Completely Modular Workholding Systems for Multi-Axis Machining

With Fixture-Pro, workholding getting your spindle and cutting tool close to the work piece in the optimal machining position can be achieved regardless of your machine or workpiece. Fixture-Pro's modular approach allows you to select the combination of subplates, risers and top tooling that is right for your set up.

- **Flexible Multi-Axis Workholding**
  - Works on all applications 5 Axis, 3+2, 4+1
- **Rigid, modular design**
  - From light machining to heavy roughing
- **Rapid set up and part exchanges**
  - Reduced setup time saves money and keeps spindle running
- **Portability from machine to machine**
  - Easily transfer work to new machines or as demand dictates

60MM & 75MM VISES

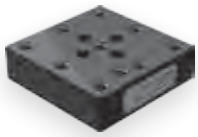
ER COLLET

130MM VISE

DOVETAIL VISE

Multiple Top Tooling options available for any part configurations.

VISE ADAPTER



SQUARE ADAPTER

DROP & LOCK

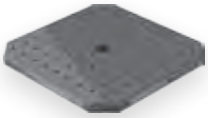
Adaptors and pallet changes to adapt vises, fixtures and quick change pallet changers.

BARBELL RISER

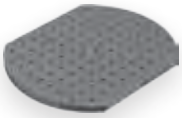
TAPER RISER

STRAIGHT FLANGE RISER

Risers to accommodate any set up including multiple part set ups and long parts requiring multiple clamping locations.



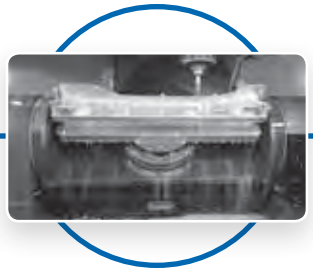
SQUARE

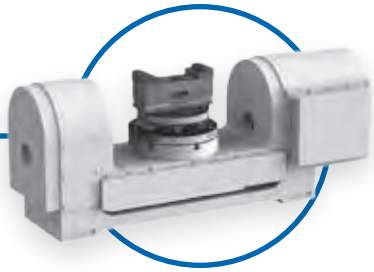


ROUND W/FLATS

ROUND

Standard Subplates for most popular machines. Custom designs are available.





How Fixture-Pro® Works

Unique, modular design offers maximum flexibility when choosing workholding for your job.

- Easily set up new or prototype jobs
- Move jobs from one machine to another
- Portability - Risers, adaptors, pallet changers and top tooling can be used on any machine
- Fixture-Pro grows with your machine tool investment

Machine Mounting Options

Option 1
QLS Mounting System

Jergens Quick Locating System or QLS allows for rapid and accurate location of QLS components on a QLS subplate.

Two precision ground shoulder bolts pass though precision ground liners to accurately locate and mount to the QLS grid.

Option 2
Centering Pin to QLS Grid

Utilizes center pin and standard SHCS to mount to the QLS Subplate. Diamond pin for radial location.

Central bore pin location standard on QLS subplates. Multiple center pin locations available on request.

Option 3
Direct to Table

Mount direct to table with center pin, keyways, SHCS and t-slot nuts.

Quickly direct mount for protoype work, long runs or to maximize Z travel.

New Rotary Adaptors for QLS and ZPS

The new Fixture-Pro adaptor permits the easy mounting of Fixture-Pro system QLS based vises, dovetail vises, collet holders and the Drop & Lock™ pallet changers for quick, flexible multi axis workholding on popular rotary indexers and trunions.

Quickly add the QLS mounting Grid to most popular table configurations and utilize Fixture-Pro top tooling and Drop & Lock pallet changers.

ZPS systems from Jergens provide a single step to fix, position and clamp parts, reducing setup time by as much as 90%. At the same time, repeatability of +/- 0.0002" can be achieved.

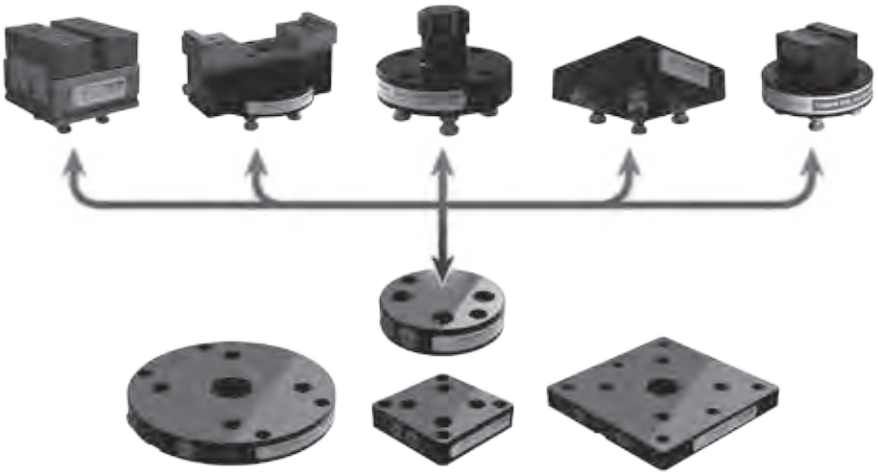
See page 72 for more rotary adapter products, including risers and top plates.

Jergens

DROP & LOCK™

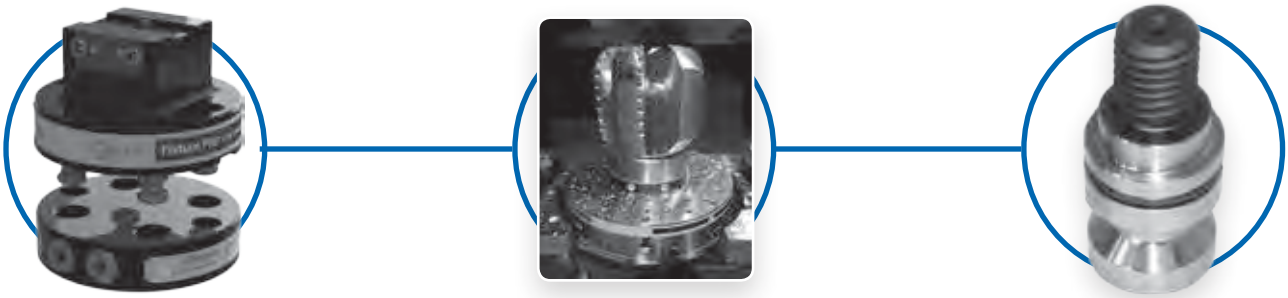
PALLET CHANGERS

Drop it, lock it and go!



Drop & Lock™ Pallet Changers provide the fastest, most accurate changeover of adaptors and top tooling. Quick change is made possible by pull studs and just two turns of a hex wrench as an alternative to traditional set screws.

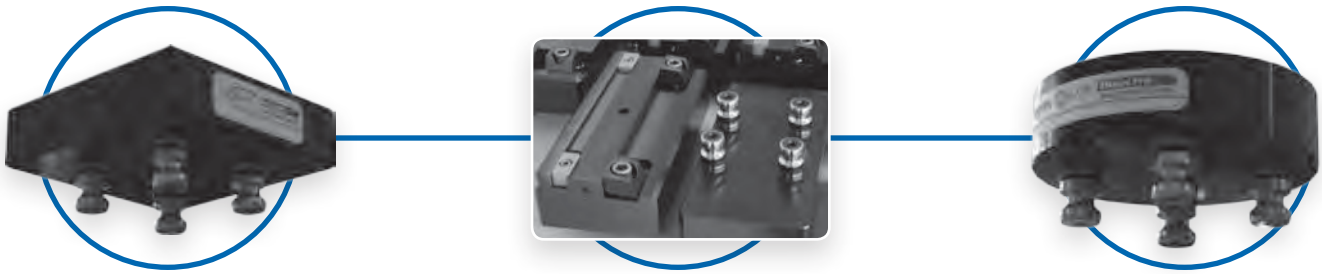
- Rapid part to part changeover during machining
- Two quick turns of locking wedges securely position and clamp repeatability to +/-0.0005”
- Secure, rigid clamping capable of high metal removal rates and difficult to machine materials
- A wide range of top tooling options available as standard in Drop & Lock design.
- Available in 130mm and 250mm configurations.
- Accurately transport parts while in the original clamping to secondary operations or for first article inspection on a CMM.
- Unique strong designed pull studs locked securely by two wedges
- **U.S. Pat. 8,708,323 and U.S. Pat. 10,603,750**



DIRECT TO PART STUD MOUNT

Jergens
DROP & LOCK™
PALLET CHANGERS

Versatility



CUSTOM FIXTURE

Drop & Lock™ pallet changers and pull studs offer versatility in configuration as well as application, providing solutions on multi-axis machines as well as vertical and horizontal machining centers.

- Pull Studs can be mounted direct to the part to eliminate interference with vise jaws
- Utilize Machinable Blanks to create custom fixtures for 3, 4 and 5 axis applications
- Used on horizontal, vertical and other applications

4 Sided horizontal column with Drop and Lock pallets

Pallet changer on VMC riser with ER Collet Fixture

Tri column with Drop and Lock Pallets provides additional side clearance. Parts can be indexed in the pallet changer to machine 5 faces in Horizontal applications.

Top Tooling Solutions

The Industry's Most Complete Range of Standard Vises, Collets and Adapters

Rigid, high-strength multi-axis vises

- Self-centering and fixed jaw
- 40mm to 125mm widths
- Wide range of standard, reversible hard and soft jaws available

Drop & Lock™ style multi-axis

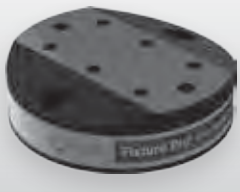
- Lower profile for increased "Z" travel
- 130mm square low profile on 5CV13012
- Direct mount to table with optional clamps

Dovetail Vises

- 130mm light and heavy duty standard dovetails
- 10 Degree dovetail angle permits high clamping force
- Heavy Duty Block Style dovetails for large parts and extreme cutting conditions

ER Style Collet Holders

- Excellent option for solid round and cylindrical parts
- Available for standard ER collets from size 16 to 40



Vise Adapters

- For QLS and Drop and Lock mounting of 5 Axis vises

Drop and Lock™ Machinable Blanks

- Quickly design custom fixtures
- Utilize low profile clamping components

5-Axis Subplates

Standard subplates mount to machine table with center bore and do not include mounting holes.

- Material: 1018 Steel
- Thickness Tolerance ±0.005
- Flat & Parallel within .0005"/Ft. (.013mm)
- Includes Pre-Installed QLS Bushings

= Jergens QLS

Quick Locating System (QLS) Bushings for shoulder screws that are hardened and ground to +/- 0.0003"

* 200mm risers are designed to work with rotary tables. If intended for use on Fixture-Pro® subplates, 4 extra mounting holes are needed. Call 877-426-2504 for assistance.

Universal Fixture-Pro® and ZPS Rotary Adapters

The new Fixture-Pro® Adaptor permits the easy mounting of Fixture-Pro® system QLS based vises, dovetail vises, collet holders and the Drop & Lock™ pallet changers for quick, flexible multi axis workholding on popular rotary indexers and trunions. ZPS systems from Jergens provide a single step to fix, position and clamp parts, reducing setup time by as much as 90%. At the same time, repeatability of +/- 0.0002" can be achieved.

- Mounts to most rotary indexers face plates with 4 or 6 T-slots
- Fixture-Pro® model allows mounting of Jergens Fixture-Pro® top tooling
- ZPS model accepts air gun valve or standard fittings
- Material: Aluminum
- See page 51-52 for pull-studs and accessories.

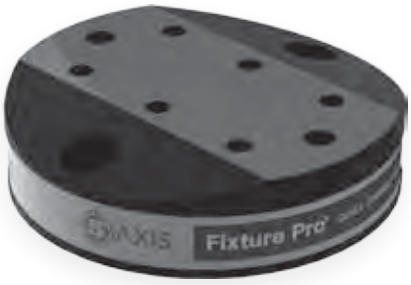
5-Axis Vise Adapter Plates



Convert the Jergens 5-axis vise into a QLS grid for precision mounting of any Fixture-Pro® modular system part that requires a match with the QLS grid.

- Material: 1018 Steel
- Thickness Tolerance ±0.005 (.13mm)
- Flat & Parallel within: .0005"/Ft. (.013mm)
- Includes: Hardened Bushings
- Vise Adapter Plates Include:
  - 2 Vise Adapter Pins 5LP25M10
  - Vise Mounting Screws

Vise Locator Adapter Pin 5LP25M10 Available. Please call 877-426-2504 for more information.

5-Axis Drop & Lock™ Pallet Changer - Round

Mount parts or fixtures quickly to a machine. Available in Round and Square styles. Drop a fixture or vise into the Pallet Changer using the Fixture-Pro® pull stud system. With two quick turns of a hex wrench it's ready to machine. Drop it, Lock it, and go!

- Material: A2 Steel
- Hardness: 58-62 Rc
- Flatness: Ground .0002"/Ft.
- Thickness Tolerance: ±0.002
- Finish: Black Oxide
- **U.S. Pat. 8,708,323 and U.S. Pat. 10,603,750**

5-Axis, Low Profile, 130mm Self-Centering Vise

Jergens' top tooling solutions now also include a 130 mm low profile vise for increased Z travel.

- Material: Steel
- Extends the work area for multiaxis applications
- Increases Z travel while maintaining the same characteristics as larger vises
- The rigid slide assembly design and sealed lead screw provide accuracy, repeatability and long service life
- Part of the industry-leading Fixture Pro® family
- Available in standard and Drop & Lock™ versions, for quickness and accuracy
- Full line of jaws and insert options on page 79

5-Axis, Low Profile, Heavy Duty, 60mm Self-Centering Vise

Quick change, high clamping force and precision

Ideal for maximizing machining capacity on vertical, horizontal and multi-axis machining centers, Jergens new quick change vises offer repeatability (+/- 0.0005") and multiple jaw and insert options.

Unique modular designs allow mounting styles including:

- Material: Steel
- Direct to Machine Table
- Fixture-Pro® Quick Change
- Drop & Lock™ Pallet Changers
- Zero Point System (ZPS)
- Jaws not included
- Full line of jaws on page 96-97

5-Axis Top Tooling – 130mm Dovetail Vises

Light Duty

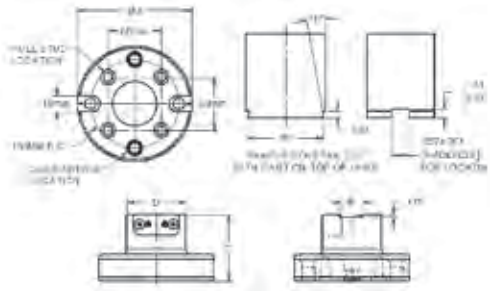
Heavy Duty

Mounts directly to a rotary table, Fixture-Pro® Riser or any QLS Grid. Reduces distortion of parts. Requires 0.060" or less material to clamp.

Cutting a 10° angle cut in the bottom surface of a machinable part allows for extremely high clamping forces while leaving all 5 sides accessible. The heavy duty 130mm version has higher torque and tilting moments than the standard 130mm Fixture-Pro® Dovetail Vise.

Dovetail cutter (part number 5DC3) available.

- Material: 1018 Steel
- Flat & Parallel within: .002"/Ft. (.05mm)
- Includes: Hardened Bushings
- Includes Center Locator Pin



Part Number	Pull Studs	Description	A (mm)	B (mm)	C (mm)	D (mm)	Locating	Mounting Type	Mounting Grid	Weight lbs (Kgs)	Dovetail Cutter P/N

Accessories
5-Axis Locating Pins

Locates subplates to machine rotary tables, risers to subplates, and mounts Fixture-Pro® Top Tooling directly to a rotary table.

- **Material: 1018 Steel**
- **Tolerance: ±0.0002 (.005mm)**

Pull Studs

Adapt any machinable part or fixture directly to the part.
Use with our quick change Drop & Lock™ Pallet Changer.

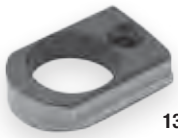
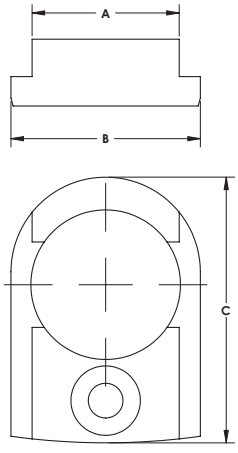
Used to adapt any of the Fixture-Pro® elements with bottom keyway slots for alignment to your machine table slots. Unique design accommodates socket head cap screws, which will tighten a T-nut to the T-slot in your machine.



130

250



- Material: Steel, Case Hardened, 60 Rc
- Width (A) Tolerance: +0, -.0005
- Finish: Black Oxide
- Screws included

Fixture-Pro® components allow you to mount directly to a T-slot with our special through-hole machine keys, QLS bushings, and QLS shoulder screws. All hardware mounting methods can quickly be converted over and mounted to a different machine tool the next time you use the components.

Jergens – The Pallet Pros™

Offering the widest range of Manual Pallet Systems in the market

The most comprehensive range of manual pallet system solutions for quick change needs, with numerous key advantages that translate to increased productivity:

- Quick Set-Up
- Rapid Part Changeover
- Accurate & Repeatable
- 5 Axis Part Access
- Well-Suited for Custom Fixtures and Direct to Part
- Mounting
- Allow Parts to Remain in Original Clamping Through Multiple Operations
- Useful in Non-Cutting Operations
  - i.e. CMM – First Article Inspection

5-Axis Quick Clamping Block

The Jergens 5-Axis Quick Change System (QCB) is an ideal partner for the Jergens 5-Axis Clamping System. The QCB changes the workpiece position on 5-Axis machining centers. This helps reduce interference for the tool.

Rapid and precise change of clamping elements optimize efficiency. The QCB with its integral mechanical Zero-Point Clamping System provides you with the ability to increase productivity and lower costs.

Manual 4-Pin Pallet

The Jergens 4-Pin Pallet is a quick and easy way to change fixtures or workpieces. The fixture or workpiece is outfitted with 4 pull studs that fit into the pallet changer. Rotating a single hex drive pulls down and locks the fixture or workpiece to the pallet. Pallets can be mounted to multiple machines allowing the fixture to be moved, located and clamped to each of the machine tools.

- Case-hardened steel Drive Actuation
- Repeatability 0.005mm (0.0002 in)
- Direct to Table Mounting
- Mechanical Clamping & Unclamping
- Accurate Four Pin Design
- Single Hex
- Utilize Available Machinable Blanks

Manual ZPS

Ideal when Pneumatic and Hydraulic connections are not available

The manual ZPS modules provide locating and clamping with single bolt actuation. The indexing slots on the face of the modules allow workpieces to be indexed in 90° increments. Indexing slot plugs are available for applications where only specified slots are needed.

- Direct Quick Change Mounting to Mechanical clamping and unclamping
- Quenched and tempered steel
- Repeatability 0.01 mm (0.0004 in.)
- Single Hex Drive Actuation
- Flexible Mounting & Placement
- Two Sizes Available – K10 & K20
- Eliminates Need for Air or Hydraulic Connection

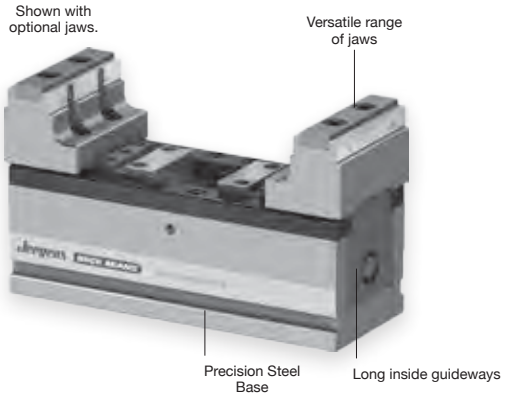
5-Axis Self-Centering Vises



This series is suitable for many clamping tasks on 5-Axis machining centers and pallet systems. Whether the workpieces are angular or round, the concentric clamping system provides the same zero position.

The compact design, high stability and versatile selection of jaws (grip jaws, plain jaws, soft jaws, pendulum jaws, V-Type jaws) are additional features tailored for 5-Axis machining.

The 40, 60, 100 and 125 clamping systems are suitable for I.D. to O.D. clamping.

- Designed for 5-Axis machining
- Free access to the workpiece, allowing the use of short standard tools
- Simple, robust construction, smooth surfaces for easy cleaning
- Also suitable as a module for standard devices
- Comprehensive jaw selection sold separately on pages 96-97

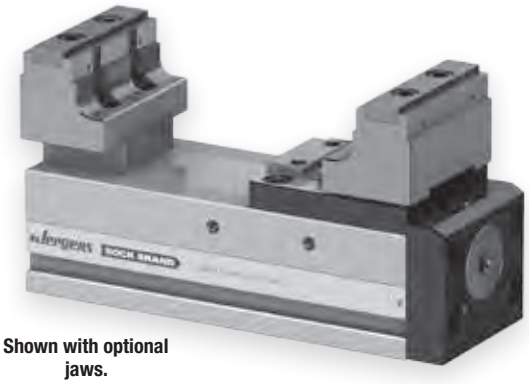
Jergens 5-Axis Fixed-Jaw Vise



Shown with optional jaws.

Designed especially for multi-face machining with a single clamping operation. Ideal for machining complicated workpieces in a single clamping operation, such as in mold making. These vises are small, but have a large holding capacity. A variety of jaw options increase the range of applications. Grip jaws and V-type jaws enhance the retention force of the workpiece. The hydraulic version provides automatic power clamping with exact force.

- Designed for 5-Axis machining
- Free access to the workpiece, allowing the use of short standard tools
- Simple and robust construction, smooth surfaces, easy cleaning
- Also suitable as a module for standard devices
- Comprehensive jaw selection sold separately on pages 96-97

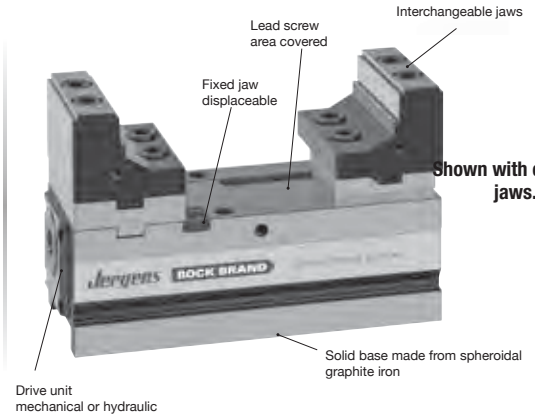
5-Axis Compact Vises

New machining technologies and manufacturing methods call for the development of new solutions in clamping technology. The Jergens 5-Axis Compact Vise, with its short base and easy movement of the fixed jaw, is ideal for 5-sided machining.

The well balanced design of the guide between the base and the moveable jaw allows the use of high clamping jaws, for performing machining operations close to the workpiece.

The base is made from cast steel for rigidity and dimensional stability. All sides are hardened and ground.



Shown with optional jaws.

Jergens 5-Axis Pallet Clamps

Jergens pallet clamps (comprised of clamping jaws with a grip structure) can be used either for concentric clamping or for clamping to the fixed jaw. These pallet clamps are an effective, affordable clamping solution.

- **2 designs available: concentric clamping or clamping to a fixed jaw**
- **Highest quality, compact, all-steel construction**
- **Precise clamping**
- **Easy to dismantle and clean**

Fixed Pallet Clamp

Clamping to the fixed jaw

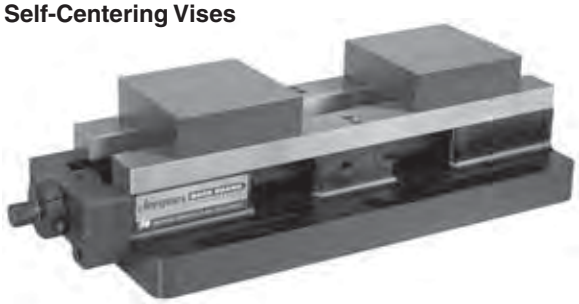
Jergens®
MANUFACTURING EFFICIENCY

Jergens
WORKHOLDING SOLUTIONS GROUP

Jergens Production Vise System

Self-Centering Vises



• Quick, simple fixturing for concentric machining

Dual Station Vises

Maximum Holding Power

• Jaws machined to the contour of your workpiece maximizing holding force.

Production Vise Columns

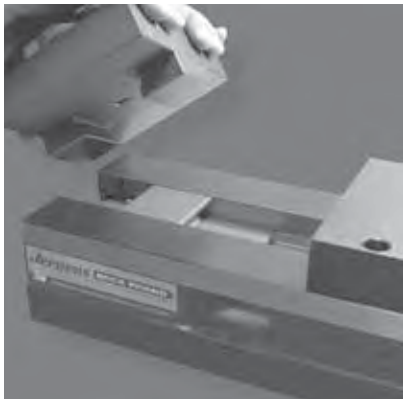
2, 4, 6, 8, 12 and 16 station models available.

6" (150mm) MonoQuad

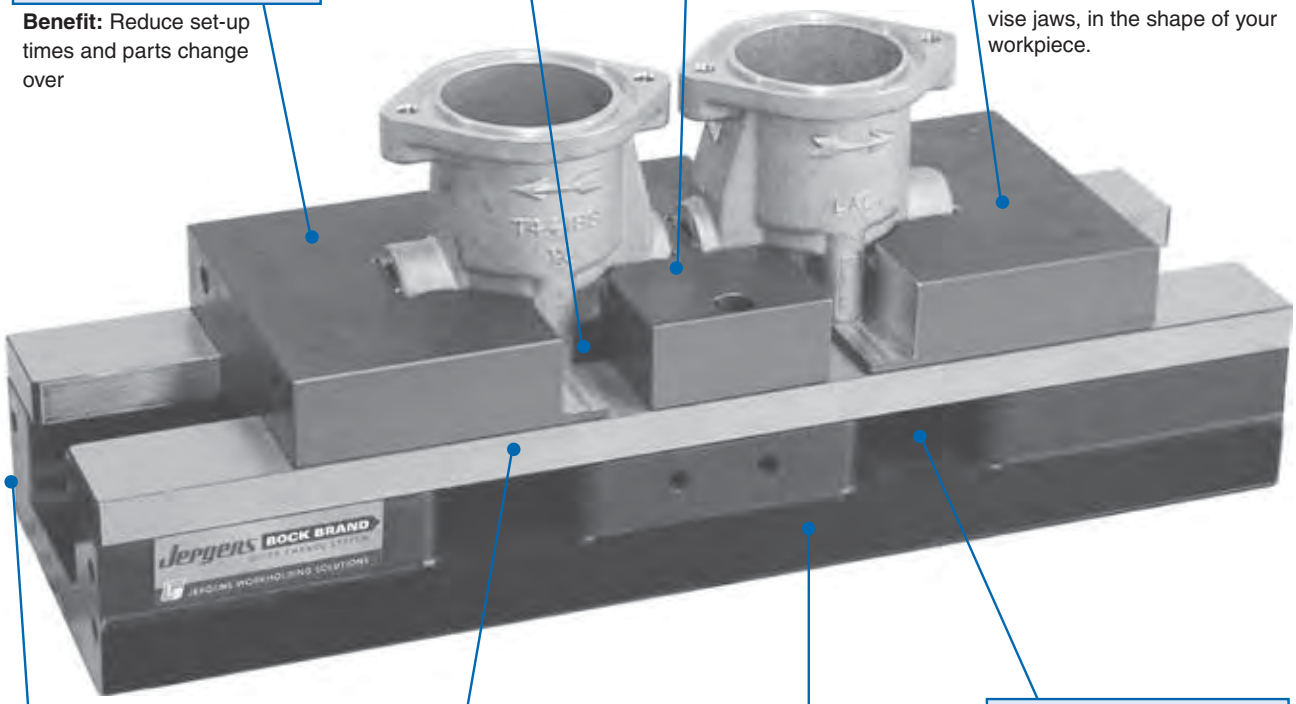
4" (100mm) MonoQuad

• Quick change reverseable soft jaws
• Single station adapter plate included
• Multiple base designs to meet any requirement

Fastest Quick Change Jaw System



Jergens Production Vises
Features and Benefits:



Wide/Full jaw travel

Benefit: Larger workpiece holding capacity

Easy to remove center fixed jaw

Benefit: Quick change over to single station vise for larger parts

Fully machinable and reversible jaws

Benefit: More workholding flexibility per jaw set. Machine "Pockets" into the vise jaws, in the shape of your workpiece.

Fastest quick change jaw system

Benefit: Reduce set-up times and parts change over

Chip and fluid flow through base

Benefit: Easier to keep clean, no more clogging

Rigid construction with hardened and ground stainless steel rails

Benefit: High accuracy and repeatability

Fully sealed lead screw assembly

Benefit: Lower maintenance and repair problems/cost

Multiple mounting base configurations available

Benefit: Increased flexibility and use with existing equipment and hardware

Vertical Machine Solutions

Narrow Base Production Vises
Pages 111 & 114

The small footprint allows maximum density of vises on your fixture or table. Best choice for applications where parts are held in multiple vises.

Ball Lock® Base Production Vises
Pages 110 & 116

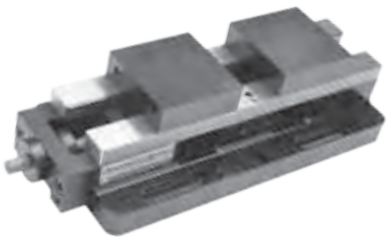
The mounting flange is cut into a jigsaw pattern to allow vises to nest closely together. Designed for use with Jergens Ball Lock® Mounting System.

Universal Base Production Vises
Pages 111 & 117

The mounting flange has slotted holes to allow mounting on any machine table.

Interlocking Base Production Vises
Pages 112 & 115

This base has an interlocking pattern to allow the vises to be mounted close to each other.

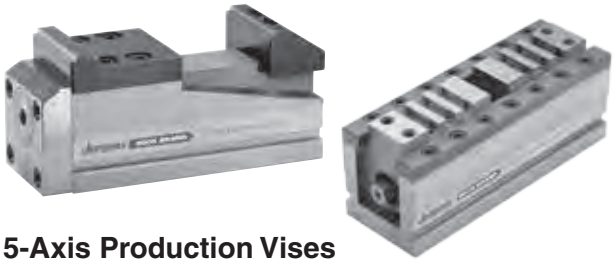


Self Centering Vises (3 Base Styles)
Pages 118–121

Self-Centering vises provide quick, simple fixturing for concentric machining of different sized workpieces.

Hydraulic Vise
Pages 128–130

Innovative compact design. Reduced set-up time. Internal Slide Assembly with Hydraulic Clamping Cylinder.



5-Axis Production Vises
Pages 140–147

5-Axis production vises and accessories rigidly clamp parts without obstructing access to multiple part faces.

Horizontal Machine Solutions

3-Sided Production Vise Columns
Pages 123 & 125

For machining 3 faces of production parts on HMC's. Large spindle noses can access the workpiece. **Allows for up to 240° workpiece accessibility.**

4-Sided Production Vise Columns
Pages 122 & 124

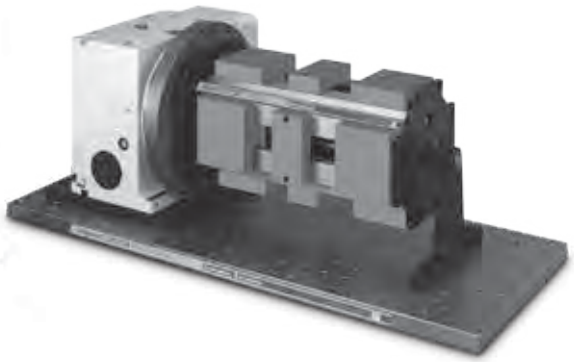
Available with bases to fit directly onto machine table pallets or to a Ball Lock® sub-plate.

6-Sided Production Vise Columns
Page 126

Increase the number of parts per load, while maintaining a small footprint. Available with bases to fit directly onto machine tables or to a Ball Lock® sub-plate.

Multiple Column Configurations Available

Please call 1-877-426-2504 or email workholding@jergensinc.com for application engineering assistance.



Jergens WORKHOLDING SOLUTIONS GROUP

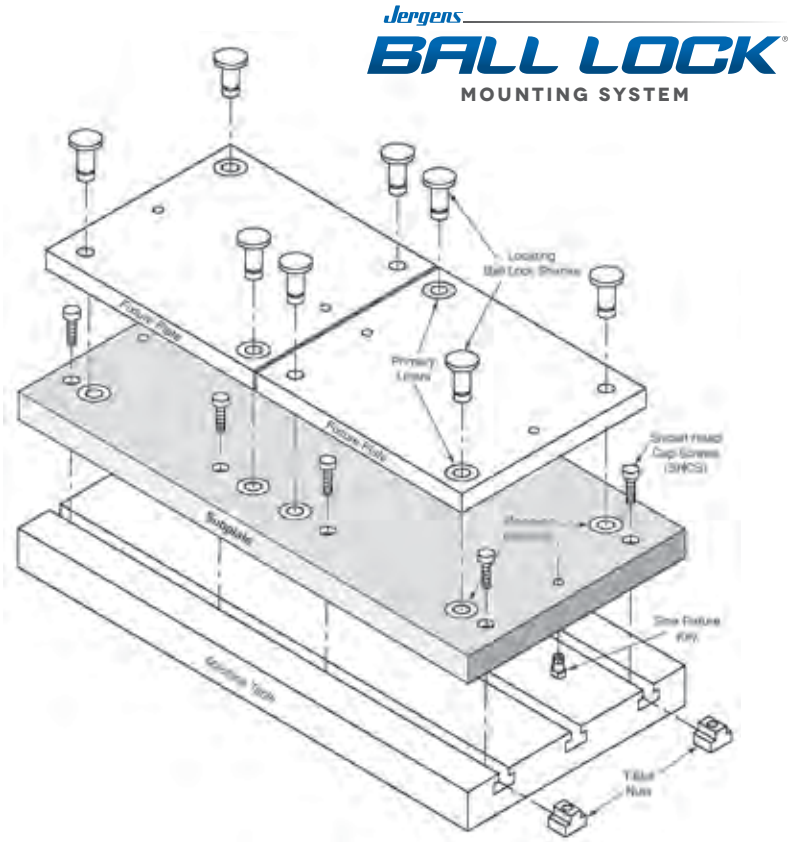
Ball Lock® Fixture Mounting System for Jergens Production Vises

Locates

The Ball Lock® System accurately positions your fixture plate...to within ±0.0005" (±0.013mm) repeatability or better, minimizing the need to indicate your fixture.

Locks

The Ball Lock® System securely holds fixture plates to subplates with up to 20,000 lbs (88kN) of hold-down force per shank.



The Ball Lock® Mounting System provides a method of quickly and accurately locating fixtures onto machine tables. The Ball Lock® Mounting System has done for machining centers what the Japanese SMED (Single Minute Exchange of Die) concept did for presses. Instead of SMED, Ball Lock® provides single minute exchange of fixtures. Fixtures can often be exchanged in less than a minute with position repeatability of ±0.0005" (±0.013mm). Fixtures can be exchanged between different machines when both are using the Jergens Ball Lock® Mounting System.

Commonly Asked Questions

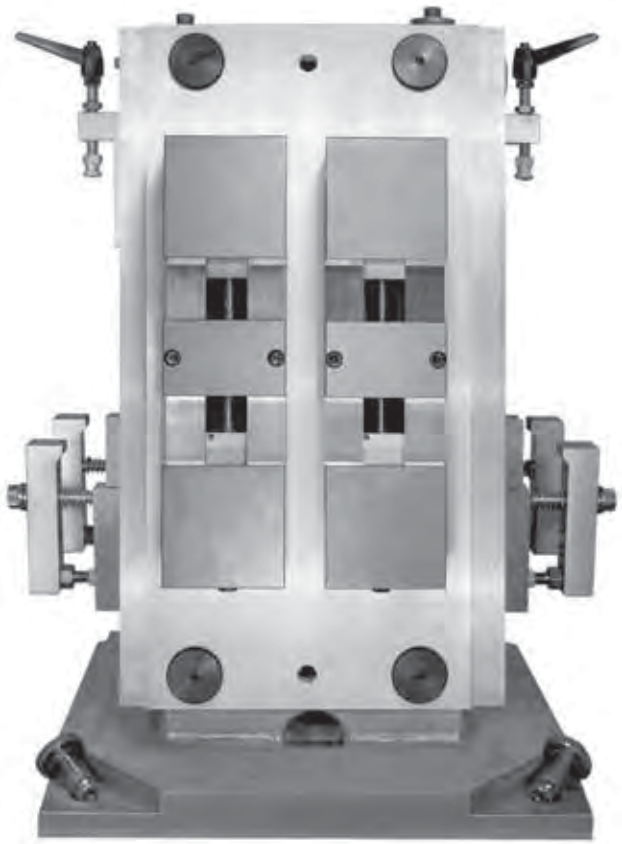
Q. What is the Ball Lock® Mounting System?
A. It is a means of locating and locking two flat surfaces together, normally a fixture plate to a sub-plate.

Q. How does it locate?
A. Similar to locating pins, two Ball Lock® shanks (pins) pass through two precision liner bushings on the fixture plate and into two precision receiver bushings on the subplate.

Q. How does it lock?
A. Inside the shank are three balls that expand into a tapered groove in the receiver bushing. This action draws the plates together. The locking balls are activated by turning a setscrew in the head of the shank, which pushes a 4th ball to distribute the clamping forces between the 3 locking balls.

Q. How many shanks are required to locate and lock each fixture?
A. Only two shanks, passing through bushings in the fixture plates, are required for location. However, additional shanks passing through clearance holes in the fixture plate will provide additional holding force distributed across the plate.

Unmatched Setup Speed and Workholding Flexibility



Q. Is there a preferable location for the liner bushing?
A. System repeatability is improved if the liners are located at opposite corners of a rectangular fixture plate. For consistency, we recommend locating the liner bushings at top left and bottom right.

Q. What are the advantages of using the Ball Lock® System over the conventional method of dowel pins and cap screws?
A. Both locating and locking are accomplished in the same motion. Ball Lock® shanks require only 2.5 turns to lock a 1/2–13 (M12) screw with ¾" (18mm) of thread engagement requires 10 turns to lock. On CNC machines, the repeatability of fixture locations makes indicating of the fixture unnecessary.

Q. How do I recess the fixtureplate for a clear surface ?
A. Counterbore the fixture plate to a diameter large enough to allow easy removal of the shank.

Note: The thickness of the plate section under the head of the shank is critical and must conform to mounting instructions .

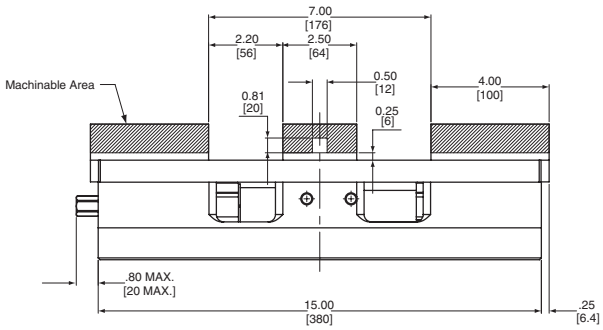
Q. What if my plate is thinner than the recommended thickness?
A. By adjusting the depth of the counterbore for the receiver bushing in the subplate, you can still use the Ball Lock® System. If there are any questions on this type of application, please call 1-877-426-2504.

Q. Can I use the shanks in a heated environment?
A. The shank is made of alloy steel, heat treated to 40-45Rc and should with stand temperatures up to 400°F. (200°C).

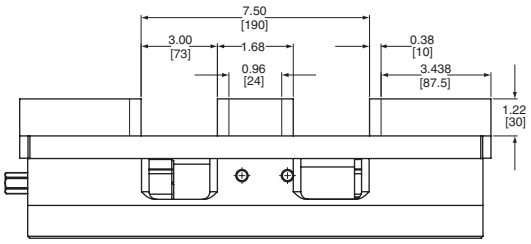
Note: Thermal expansion of fixture plates may affect the center distance tolerance and repeatability.

Jergens WORKHOLDING SOLUTIONS GROUP

Production Vises – 4" (100mm)



Vise With Machinable Soft Jaws



Vise With Hard Jaw Carrier Set and hardened steel inserts

Features and Benefits:

- Compact design in 3 extruded aluminum base styles for easy setup and to reduce weight on worktable.
- Fully sealed, patented lead screw assembly for long maintenance free service. Openings allow chips to flow out of the vise base.
- Hardened stainless steel rails, ground within ±0.001" (0.025mm) provide precise location, resist wear and provide strong support to jaws.
- Supplied with aluminum soft jaws, fully machineable and reversible. Additional jaws can be ordered separately, see page 134. Alternate jaw types can be ordered with the vise base by adding the following suffix to the part numbers:
  - **-H** for Jaw Carrier Set with Hardened Steel Inserts
  - **-S** for machineable Steel Jaws
  - **-T** for extra Tall aluminum jaws sets
  - **-W** for extra Wide aluminum jaw sets

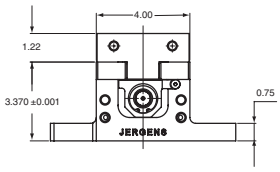
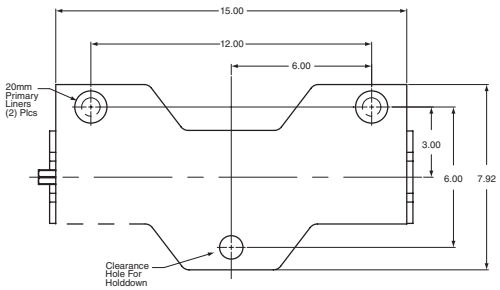
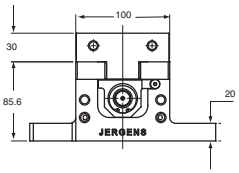
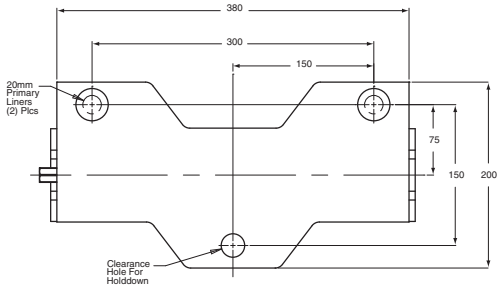
Mounting Dimensions









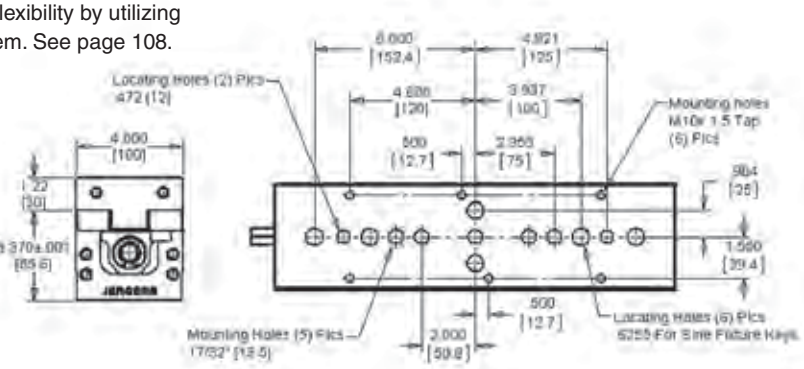
Production Vises – 4" (100mm)

Narrow Base

Part Number	Wt. lbs/Kg
49401	30/14

The **Narrow Base Vise** can be mounted as a stand-alone vise with traditional strap clamps. The narrow base has 2 locating holes for 12mm dowel pins and 2 locating holes for sine fixture keys to align vise in T-slots. Keys for inch and metric T-slots shown on page 138. Recessed mounting holes (3) are also provided for top mounting to fixture plates with socket head cap screws. Tapped mounting holes (6) are provided for bottom mounting. The slim design allows a high density of vises on machine tables, tombstones, or columns. Maximize flexibility by utilizing the Jergens Ball Lock® Quick Change Mounting System. See page 108.

- Easy to mount to Ball Lock® or other fixture plates



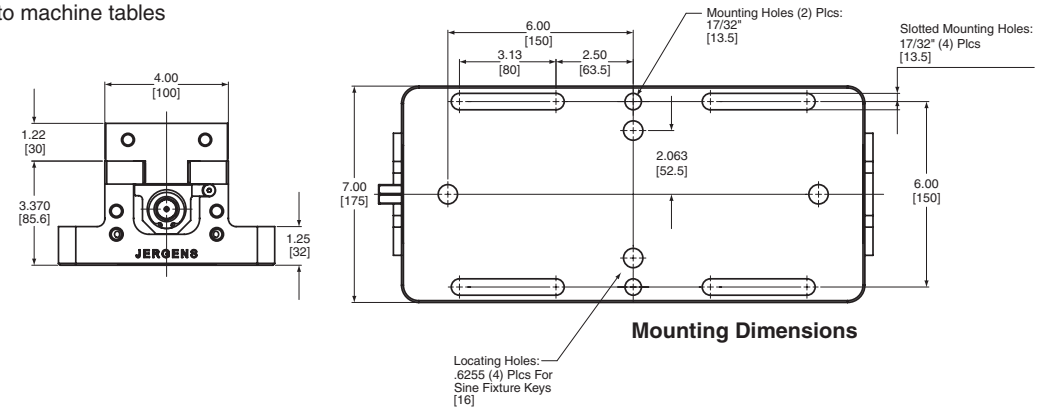
Mounting Dimensions

Universal Base

Part Number	Wt. lbs/Kg
49471	31/14

The **Universal Base Vise** is easily mounted directly to machine tool tables. Slotted mounting holes will match almost any table slot pattern. Location holes are provided for Jergens Sine Fixture Keys, to provide easy and accurate alignment with table slots.

- Easy to mount directly to machine tables



Mounting Dimensions

Interlocking Base - 4" (100mm)

The Jergens Interlocking Base Vise is for use with Jergens Bock Brand Locator Plates. The base has an interlocking pattern to allow the vises to be mounted close to each other. For more information about Bock Brand Locator Plates, see page 44.

- Hardened stainless steel rails, ground within ±0.001" (0.025mm) provide precise location, resist wear and provide strong support to jaws.
- Supplied with aluminum soft jaws, fully machineable and reversible. Additional jaws can be ordered separately, see page 134. Alternate jaw types can be ordered with the vise base by adding the following suffix to the part numbers:
  - **-H** for Jaw Carrier Set with Hardened Steel Inserts
  - **-S** for machineable Steel Jaws
  - **-T** for extra Tall aluminum jaws sets
  - **-W** for extra Wide aluminum jaw sets

Maximum Clamping Range With Shaped Jaws

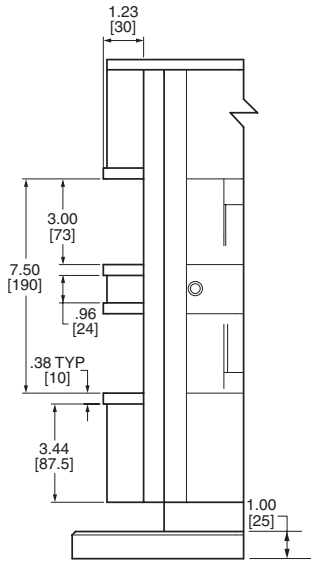
Column With Soft Jaws



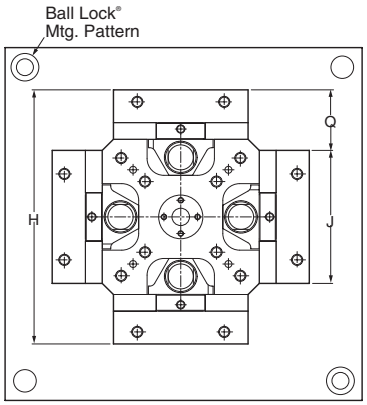
Column With Hard Jaws

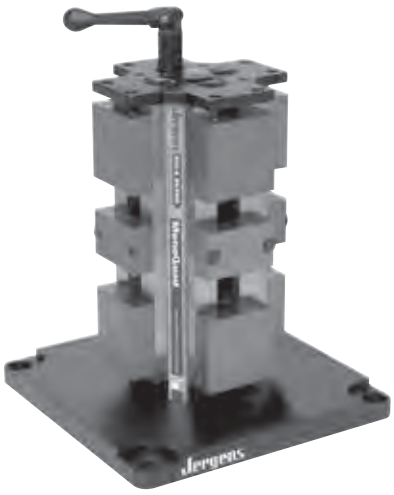
Production Vise Columns – 4" (100mm)

4-Sided

The 4-Sided Columns have eight stations for holding parts. Two standard bases and custom mounting patterns are available. The universal base mounts directly to most HMC tables using the provided mounting holes on 80mm or 100mm centers.

Further reduce set-up times by adding the Jergens Ball Lock® Mounting System to your HMC. Exchange your vise columns and any other fixture in less than a minute. Location of all fixtures will repeat within ±0.0005" (±0.013mm) or better. Please contact Jergens Customer Service for more information.





4-Sided 4" Vise Columns

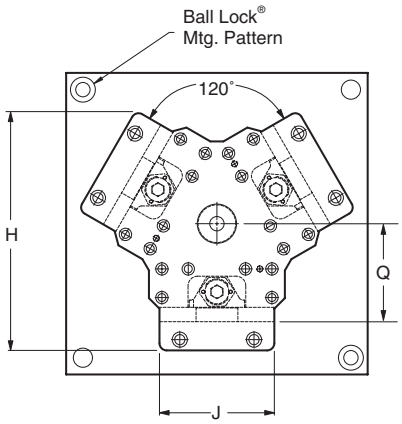
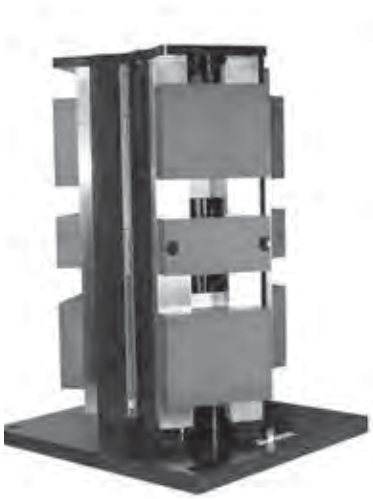
* Bases on Universal Columns are provided with two sets of mounting holes, to fit grids or T-Slots on 80mm and 100mm centers. Custom mounting patterns and base sizes are available upon request.

Production Vise Columns – 4" (100mm)
3-Sided

The 3-Sided Columns have six workstations, and may provide greater access to three or more sides of your work pieces. This design is especially beneficial on machining centers with large spindles. No need to sacrifice tool rigidity for access, by having tools extended too far from the tool holders. The universal base mounts directly to most HMC tables using the provided mounting holes on 80mm or 100mm centers.

Further reduce set-up time with the Jergens Ball Lock® Mounting System to your HMC. Exchange your vise columns and all other fixtures in less than a minute. Location of all fixtures will repeat within ±0.0005" (±0.013mm)or better.





Tri-column design allows up to 240° accessibility

Jergens
WORKHOLDING SOLUTIONS GROUP

Production Vise Columns
12 Station Hex

Jergens Hex Production Vise Columns provide 12 stations to maximize the number of parts per load. Available with bases to fit directly onto your machine table, or to a Ball Lock® sub-plate.

- Reduce part processing costs by machining 3 sides of 12 parts
- Increase unattended machine time
- Improve part throughput
- One piece column with hardened steel guide ways
- Full jaw travel permits clamping a larger variety of parts

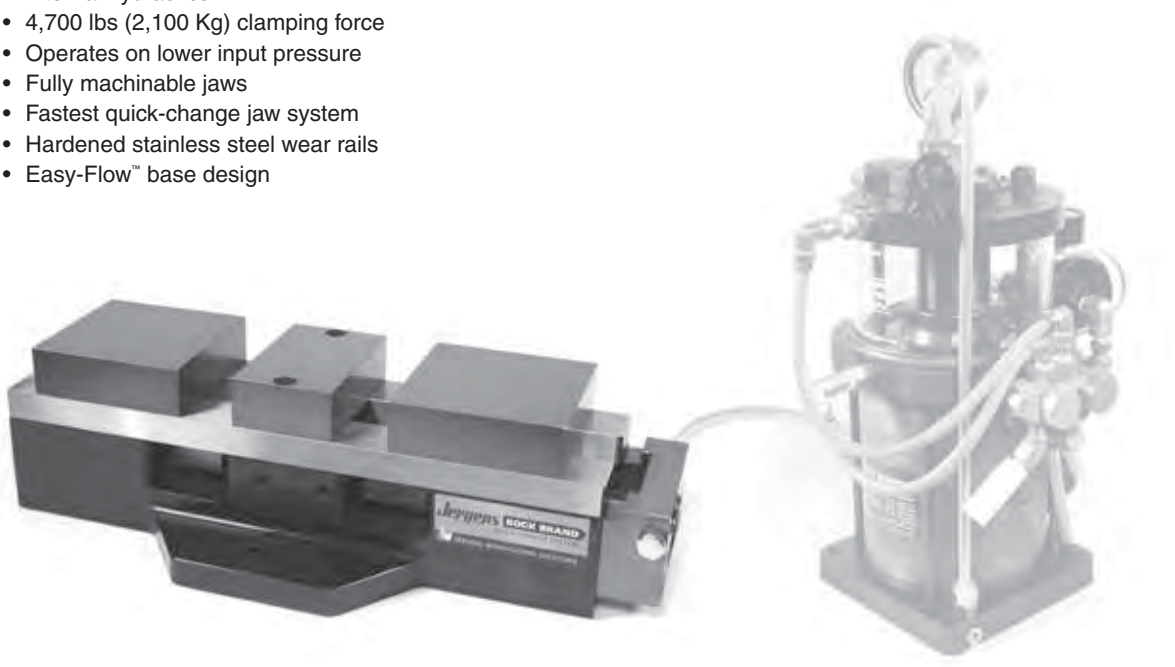
Hydraulic Production Vises

- Innovative compact design
- Internal hydraulics
- 4,700 lbs (2,100 Kg) clamping force
- Operates on lower input pressure
- Fully machinable jaws
- Fastest quick-change jaw system
- Hardened stainless steel wear rails
- Easy-Flow™ base design



Hydraulic Power Sources Available

Technical Specifications:

Hydraulic Clamping Stroke: 1/4" (6.3mm)
Operating Volume: 0.4 Cu In (6.7 cm^3)
Maximum Input Pressure: 4000 P.S.I. (275 bar)
Minimum Input Pressure: 500 P.S.I. (35 bar)
Input Port: #4 SAE (7/16-20 UNF-2B)

Clamping Force (lbs) = Input Pressure x 1.19
Clamping Force (Kg) = Input Pressure Bars x 7.67

Operation:

Using the Jergens Hydraulic Vise handle part number 49445, tighten vise jaws so the workpieces touch the fixed jaw. Next, turn the handle back 1/2 turn and activate the hydraulic cylinder. Handle included with vise.

Note: Only use the Jergens Hydraulic Vise Handle Part No. 49445 for adjustment purpose, do not use to operate vise.

Jergens hydraulic vises are available in 3 different base configurations. They offer the same unique features as Jergens manual vises.

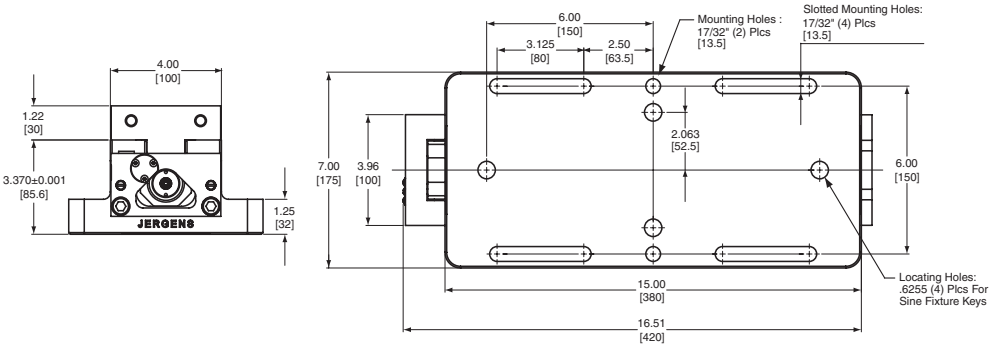
Hydraulic Production Vises – 4" (100mm)

Universal Base

Part Number	Wt. lbs/Kg
49483	35/16

- Easy to mount directly to machine tables
- Slotted mounting holes fit most machines



Ball Lock® Base

- Designed for use with the Jergens Ball Lock® mounting system
- Jigsaw pattern allows for "nesting" on Jergens Ball Lock® subplates

Inch

Part No.	Wt.	Ball Lock® Shank Part No.	Shank Size

Hydraulic Production Vise Accessories

Pre-Fill Boosters Kit

Patent No. 3839866

Part Number
61725

Jergens Booster Kit provides a complete compact power source for hydraulic vises. The kit includes a Jergens 30:1 pre-fill self-bleeding booster with filter regulator, 4 way push button actuation valve, plumbed with all fittings and hoses.

This air operated booster provides enough hydraulic volume to power up to 6 Jergens Hydraulic vises.

- **Self Bleeding**
- **Easy View Reservoir**
- **30:1 Boost Ratios**

Kit 61725 Includes

- Jergens Pre-Fill Booster 61705 (see above)
- Filter Regulator
- Actuator Valve

Specifications

Part Number	61705
Reservoir Capacity (cu. in.) / Liters	50 / 0.8
High Pressure Volume (cu. in.) / cm^3	3 3/4 / 61
Minimum Input (psi) / bar	40 / 2.7
Maximum Input (psi) / bar	125 / 8.6
Boost Ratio	30:1 / 30:1
Maximum Output (psi) / bar	3,750 / 258.5
Weight (lbs) / Kg	28 / 13

Handle

Part Number
49445

- Ergonomic design
- Aluminum handle
- 1/4" Steel Drive Hex for Jergens Hydraulic Vises

Handle for Hydraulic Vises, 4" (100mm) and 6" (150mm)

Jergens WORKHOLDING SOLUTIONS GROUP

Hydraulic Production Vise Accessories

Air-Powered Hydraulic Pumps

Shoebox™ Pumps

Part Number
61759

The "Shoebox" Pump is a low cost, compact unit used on smaller hydraulic circuits. Its small size offers the versatility of mounting on wheels (such as a workcart) and moving the pump from workstation to workstation. The "Shoebox" is a cost effective power source for hydraulic tooling column vises.

Specifications

Part Number	61755
Reservoir Capacity	300 cu. in. (4.9 liter)
Minimum Input	25 psi (1.7 Bar)
Maximum Input	125 psi (8.5 Bar)
Boost Ratio	36:1
Maximum Output	4500 psi (306 Bar)
Free Flow @ 100 psi (6.8 Bar)	100 cu.in./min. (1.64 liter/min.)
Weight	24 lbs (11Kg)

Note: Do not use more than 4,000 PSI input pressure on Jergens Vises

Kit Includes

61755 36:1 Pump

61643 Remote four-way zero-leakage valve with subplate

60703 6000psi (414 Bar) gauge

61755 Performance Curve*

Jergens Production Vise System
Flexible Clamping – Flexible Production

Variable batch sizes? Many different types of workpieces? Frequent set-ups?

The Jergens Production Vise System is the answer for these manufacturing flexibility issues!

Extra Wide Jaws

Dual Station with Hard Jaw

Full Face Vise Plate

Single Workpiece with Hard Jaws

Aluminum jaws can be completely milled, therefore a high degree of adaptability to the workpiece shape. For clamping, stop, and supporting surfaces.

Hard coated base made of high-strength, light-weight, aluminum extrusion. Guideway Rails made of hardened stainless steel.

Completely sealed lead screw assembly for trouble-free operation, power transmission through inserted steel nut, large slide stroke.

The clamping system consists of only a few components, for quick dismantling and minimum maintenance.

Aluminum or steel jaws suitable for milling:

- Milling of stop, supporting and clamping surfaces
- Quick set-up for formed parts and workpieces with complex clamping contours
- Significant reduction in expenditure on fixtures

Jaws change in a few seconds:

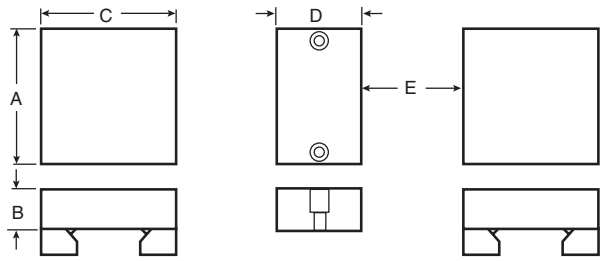
- Rapid changeover from one workpiece to the next
- Machine downtimes are minimized

High versatility:

- The clamping element can be made available for simple and complex clamping applications in a very short time

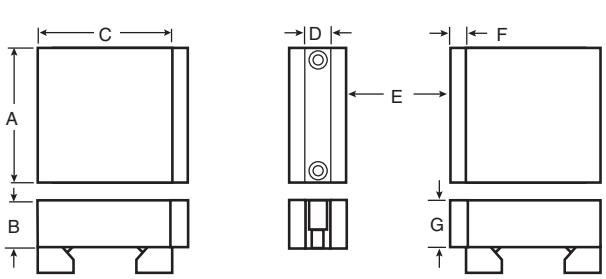
Jergens WORKHOLDING SOLUTIONS GROUP

Production Vise Jaws



Soft Jaws

• Standard Jaws are machinable aluminum.



Hard Jaw Carrier Set with hardened steel inserts

	[3] Steel Jaw Plates have black-oxide finish, and are hardened to Rc 54/58.							

[1] Mounted Dimensions

Note: Steel available for all soft jaw sets, add -S to the base part number. Example: 49420-S
*For Self Centering Vises. Moveable jaw sets available with gibs for tighter tolerances within rails. Add "SC" to part number. Example: 49421SC

Production Vise Accessories
Jaws & Fixture Plates

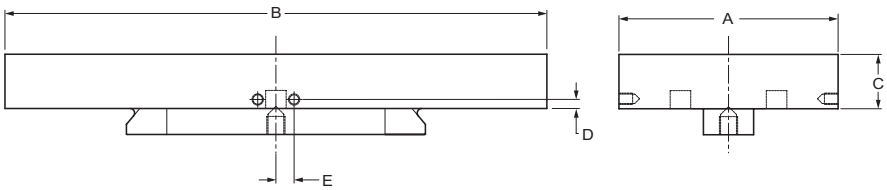
Jaws
- **Standard** fully machinable soft jaws, as supplied on the Production Vises and Columns
- **Extra Wide** fully machinable soft jaws. (-W)
- **Extra Tall** fully machinable soft jaws. (-T)
- **Hard Jaw Carriers** are drilled and tapped to accept hard jaw plates. (-H)
- **Hard Jaw Plates** are hardened steel plates that bolt onto the hard jaw carriers. (-H)

Jaws are offered three ways:
- **Jaw Sets** include two moveable jaws and one fixed jaw.
- **Moveable Jaws** are sold in pairs
- **Fixed Jaws** are sold separately.

Machinable Soft Jaws
(Standard Sets included with Vises)

Hard Jaw Carriers
With Steel Inserts*

Quick Change Fixture Plates
Fixture plates provide an alternative to holding parts in the jaws. Build dedicated fixtures on the plates, and then just snap onto a vise or column. Switch between jaws and fixture plates without removing the vise or column from the machine.



Quick Change
Fixture Plate

Quick Change Fixture Plates for 4" (100mm) Production Vises

Part No.	Description	A	B	C	D	E

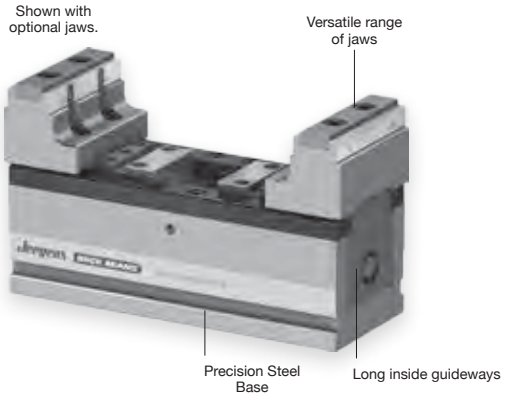
5-Axis Self-Centering Vises



This series is suitable for many clamping tasks on 5-Axis machining centers and pallet systems. Whether the workpieces are angular or round, the concentric clamping system provides the same zero position.

The compact design, high stability and versatile selection of jaws (grip jaws, plain jaws, soft jaws, pendulum jaws, V-Type jaws) are additional features tailored for 5-Axis machining.

The 40, 60, 100 and 125 clamping systems are suitable for I.D. to O.D. clamping.

- Designed for 5-Axis machining
- Free access to the workpiece, allowing the use of short standard tools
- Simple, robust construction, smooth surfaces for easy cleaning
- Also suitable as a module for standard devices
- Comprehensive jaw selection sold separately on pages 142-143

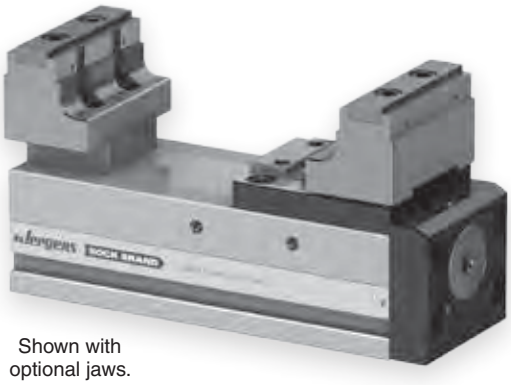
Jergens 5-Axis Fixed-Jaw Vise



Shown with optional jaws.

Designed especially for multi-face machining with a single clamping operation. Ideal for machining complicated workpieces in a single clamping operation, such as in mold making. These vises are small, but have a large holding capacity. A variety of jaw options increase the range of applications. Grip jaws and V-type jaws enhance the retention force of the workpiece. The hydraulic version provides automatic power clamping with exact force.

- Designed for 5-Axis machining
- Free access to the workpiece, allowing the use of short standard tools
- Simple and robust construction, smooth surfaces, easy cleaning
- Also suitable as a module for standard devices
- Comprehensive jaw selection sold separately on pages 142-143

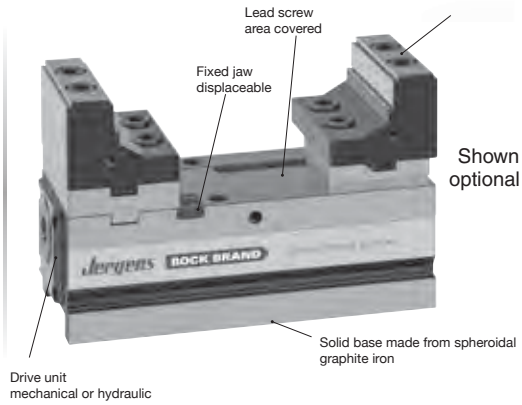
5-Axis Compact Vises

New machining technologies and manufacturing methods call for the development of new solutions in clamping technology. The Jergens 5-Axis Compact Vise, with its short base and easy movement of the fixed jaw, is ideal for 5-sided machining.

The well balanced design of the guide between the base and the moveable jaw allows the use of high clamping jaws, for performing machining operations close to the workpiece.

The base is made from cast steel for rigidity and dimensional stability. All sides are hardened and ground.



Shown with optional jaws.

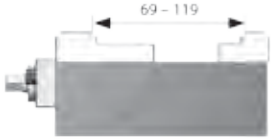
Jergens 5-Axis Pallet Clamps

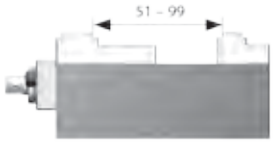
Jergens pallet clamps (comprised of clamping jaws with a grip structure) can be used either for concentric clamping or for clamping to the fixed jaw. These pallet clamps are an effective, affordable clamping solution.

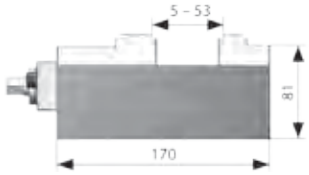
- 2 designs available: concentric clamping or clamping to a fixed jaw
- Highest quality, compact, all-steel construction
- Precise clamping
- Easy to dismantle and clean

Fixed Pallet Clamp

Clamping to the fixed jaw
Clamping jaws with a grip structure







Part Number	Clamping Principle	Jaw Width (mm)	Clamping Force⁂ (kN)	Clamping Width (mm)	Clamping Step (mm)	Weight (Kg)

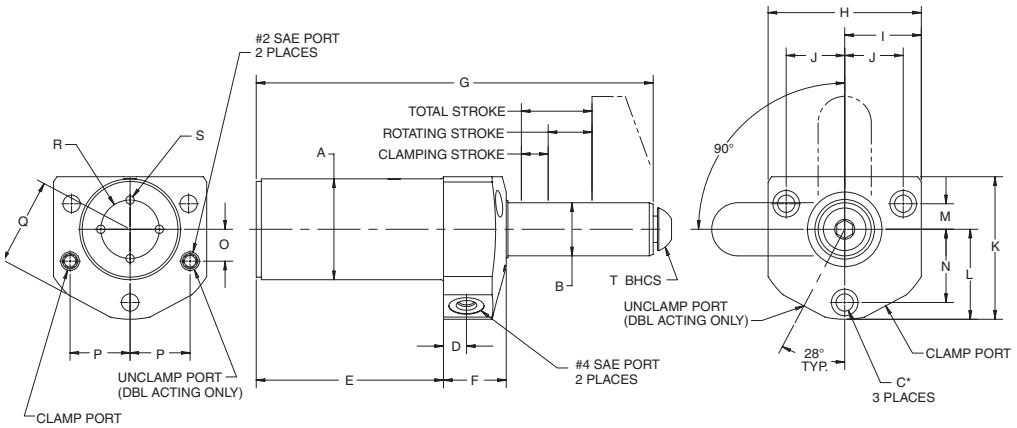
Swing Cylinder – Top Flange/Manifold Mount

The piston rotates 90° to the right, but may be ordered with 90° left rotation (add - LH to clamp part no.) or no rotation (add - SP to clamp part no.)



- Clamping capacity from 1,100-5,000 lbs. max.
- Versatile manifold mount or conventionally plumbed
- Single and Double Acting available
- Available in three body sizes
- Assortment of Clamping Arms (sold separately) See page 152
- Popular top flange mounting design

These popular and highly adaptable swing style cylinders contain built in features, which allow users to simplify the design process. They are directly interchangeable with competitive products.

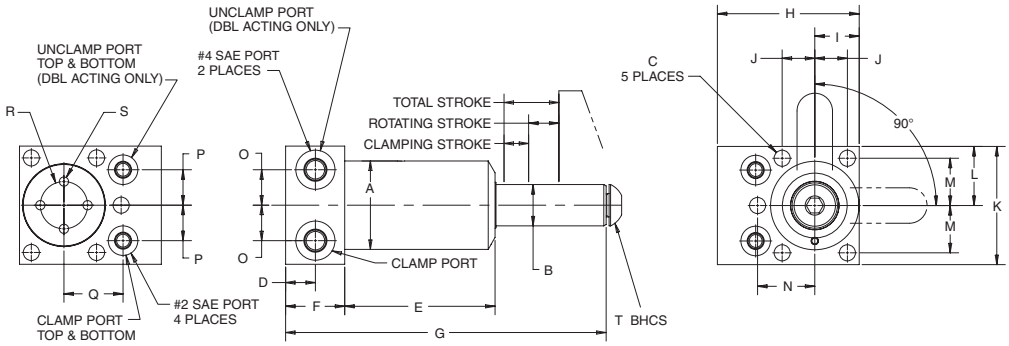
Swing Cylinder – Bottom Flange/Manifold Mount

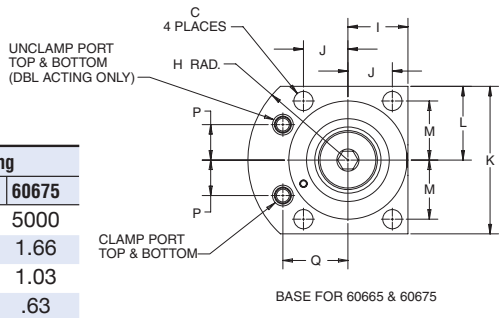


The piston rotates 90° to the right, but may be ordered with 90° left rotation (add - LH to clamp part no.) or no rotation (add - SP to clamp part no.)

- Clamping capacity from 1,100-5,000 lbs. max.
- Manifold mounting or standard plumbing
- Single and Double Acting available
- Highly adaptable flange mount design

(Clamping Arms sold separately)

Bottom Flange Swing Cylinders offer versatility as a through hole bottom mount or top plate mounting device.



BASE FOR 60665 & 60675

Swing Cylinder - Application Information

- Arm length can effect clamping pressure - See Chart and Data
- Weight should be considered when utilizing modified or special arms, other than those provided by Jergens. Excessive weight and length may damage external rotating components.
- Speed of operation is a major consideration. All swing cylinders **MUST BE USED WITH FLOW LIMIT VALVES** to show the rotation action.
- Full second rotation time is recommended.
- Care should be used when select hydraulic power sources - be aware of maximum operating pressures.

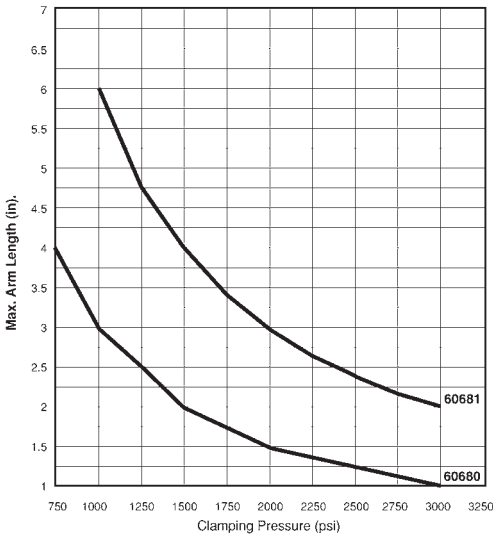
Swing Cylinders

These versatile swing cylinders/clamps can be used as single or double acting rotating clamps, or push/pull cylinders. The piston in the Swing Cylinders rotate 90° to the right, but may easily be changed to 90° left rotation, or to no rotation at all.

WARNING:
All swing cylinders must be used with flow limit valves to dampen the rotating action. Please see maximum flow rate shown below. See page 156.

- Standard with an arm
- Can be mounted using four #10 cap screws or the 1"-12 thread on the O.D. of the cylinder
- Optional components include the threaded mounting bracket and jam nut shown below
- Can be used as a non-rotating clamp
- Maximum recommended flow rate is 20 cubic inches per minute per clamp (approximately 1 second clamp time)
- **Note: Arm length can affect clamping pressures. See chart at right for more information.**
- Available in Fixture Pro® Design Software

Maximum Arm Length Vs. Pressure
Swing Cylinder with Single Arm



Specifications

60680 Swing Cylinder	Clamp (pull)	Return (push)

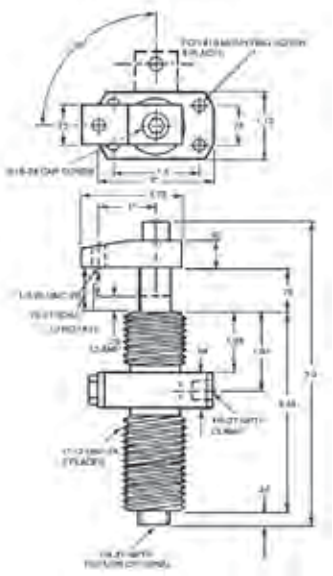
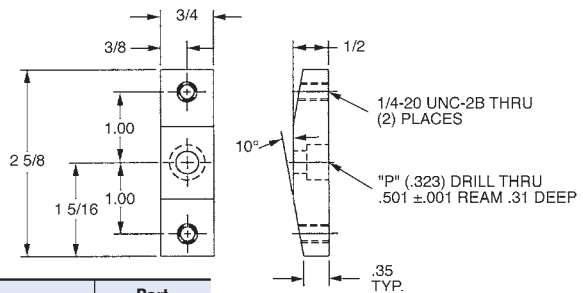
Clamping	.25	.25
Weight (lbs)	1	1



Accessories

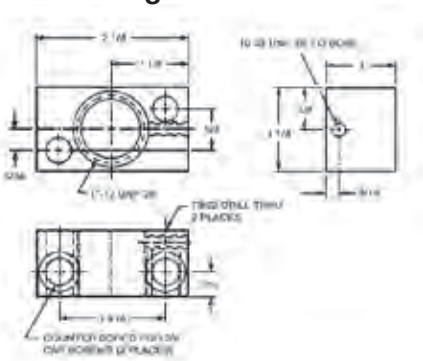
Double Arm



Description	Part Number
Mounting Block	**60953**
Hex Jam Nut	**60964**
Optional Double Arm	**60923**

See page 167.

Mounting Block



Inch to metric fittings available – see page 213.

Swing Cylinders
Large

- Standard without an arm.
- Socket Head Cap Screw is included.
- Single or double arms are available.
- Can be mounted using four 3/8" cap screws, or the 1 7/8"-16 O.D. thread of the cylinder.
- Optional components include a jam nut or a mounting bracket to replace old Jergens part number 60621.
- Can be used as a non-rotating clamp.
- Maximum recommended flow rate is 90 cubic inches per minute per clamp. (Approximately 1 second clamp time.)
- **Note: Arm length can affect clamping pressures. See chart, page 154, for more information.**
- Available in Fixture Pro® Design Software

WARNING:
All swing cylinders must be used with flow limit valves (see page 156) to dampen the rotating action. Please see maximum flow rate shown above.

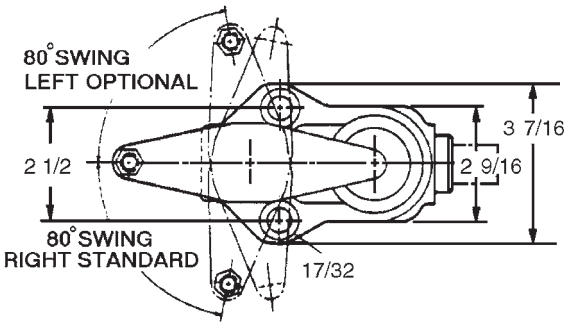
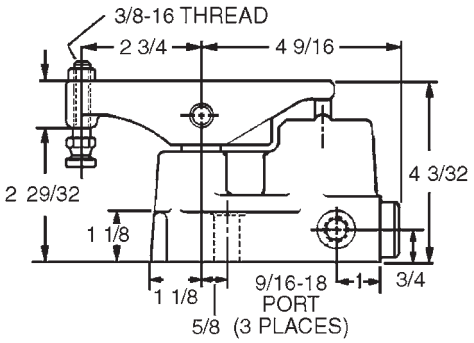
Swing Clamps

Jergens Swing Clamps are designed to swing 80° away from the workpiece to allow easy accessibility for part insertion or removal. Swing Clamps may be used in any attitude. The clamping arm may be positioned to swing either to the left or right by repositioning one cap screw. The right hand swing is standard.

- Right or Left Hand Swing
- 4800 lbs. Clamping Force
- Operates in any position
- Clamp arm has 1/4" of vertical travel
- Can be used with flood coolant
- Available in Fixture Pro® Design Software





Specifications

Part Number	60685
Operating Volume (Cu. In.)	1.6
Minimum Operating Pressure (psi)	80*
Maximum Operating Pressure (psi)	3000
Maximum Output Force (lbs.)	4800
Weight (lbs.)	9.25

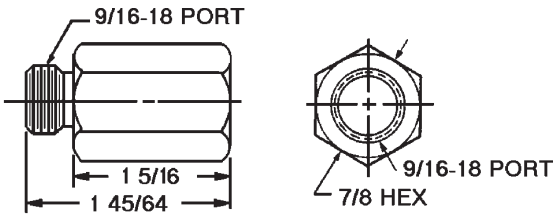
*80 psi to swing, 200 psi to clamp.

IMPORTANT:
Jergens Swing Clamps are built to operate on pre-fill systems allowing much larger circuits to be used. To use a Jergens Swing Clamp with a standard booster or with any other power source you ***must*** use the Flow Limit Valve shown below.

Flow Limit Valves

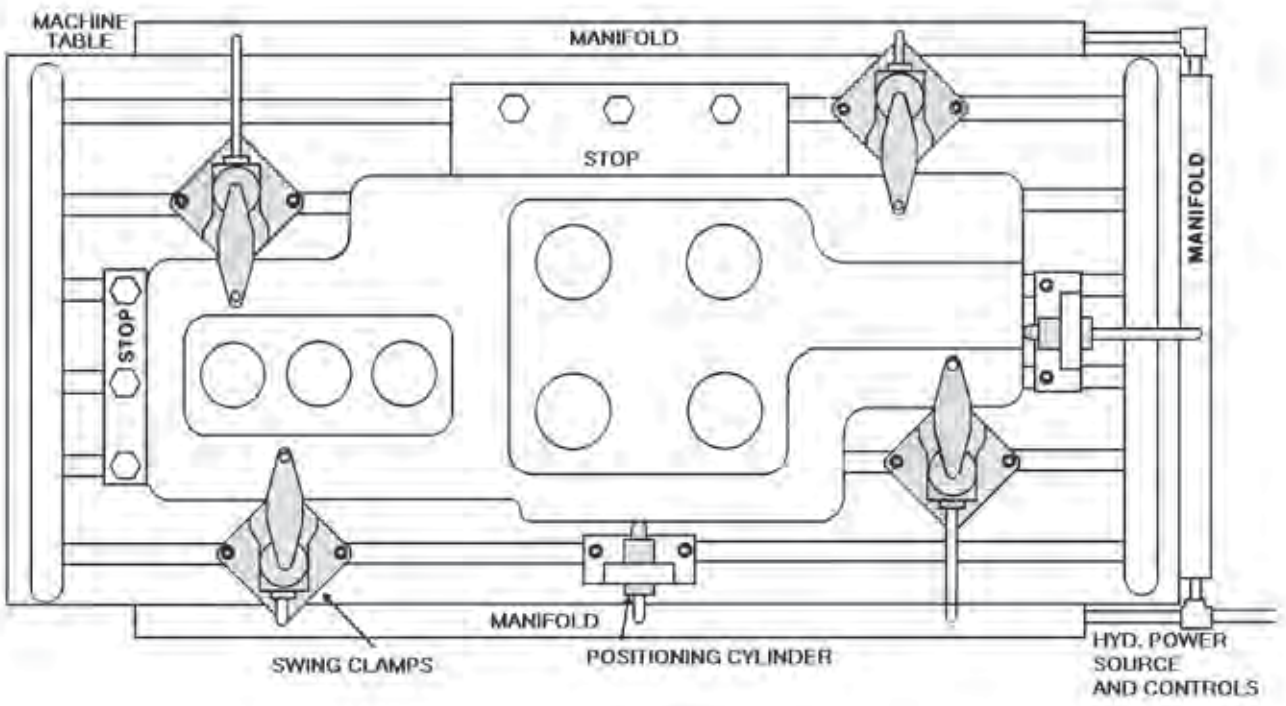
The Flow Limit Valve restricts the flow of oil to dampen the rotating action of the Swing Clamp. Flow Limit Valves are not needed with 36:1 or 71:1 Air Powered Hydraulic Pumps. (Part Number **61755** or **61756**).

Part Number
61648



Inch to metric fittings available – see page 213.

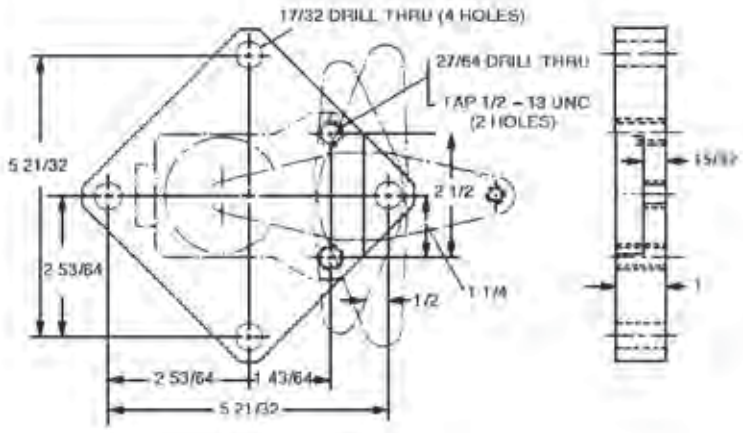
Swing Clamp
Application



For hydraulic clamping directly on the machine table, use Jergens Swing Clamps and Mounting Plates. The workpiece is positioned using Threaded Cylinders and fixed stops. Manifolds at the edges of the table, with hydraulic quick disconnects, allow any number of clamps to be used.

Mounting Plates

- Material: Low Carbon Steel
- Finish: Black Oxide
- Available in Fixture Pro® Design Software



Part Number
60971

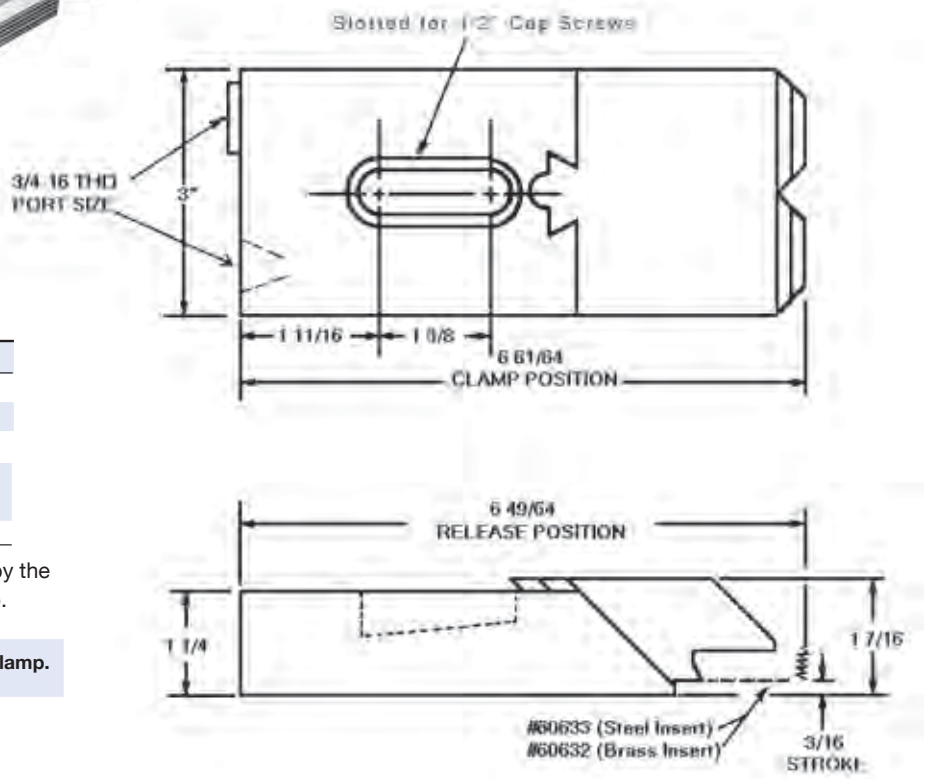
Mounting plates are subplates for Swing Clamps and are designed to save fixturing cost and allow versatility in set-ups. Mounting Plates may be bolted directly to your machine table and moved to any location on the table. Each mounting plate has pre-drilled mounting holes or can be easily adapted to your machine table or application.

Toe Clamps

U.S. Patents:
No. 4406445

Features

- Single Acting
- Low Profile
- Direct Mounting
- 3/16" Stroke
- 3000 lbs. Force
- Steel or Brass Toe Insert Available
- Available in Fixture Pro® Design Software



Specifications

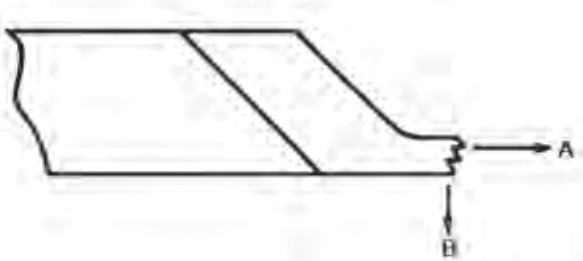
Part Number	60631
Operating Volume (cu. in.)	.115
Minimum Operating Pressure (psi)	200
Maximum Output Force (lbs.)	3000
Overall Stroke	3/16

A washer (60636), to prevent damage by the cap screw, is included with each clamp.

Toe Insert is not supplied with the Toe Clamp. See below to order the Toe Inserts.

Toe Inserts

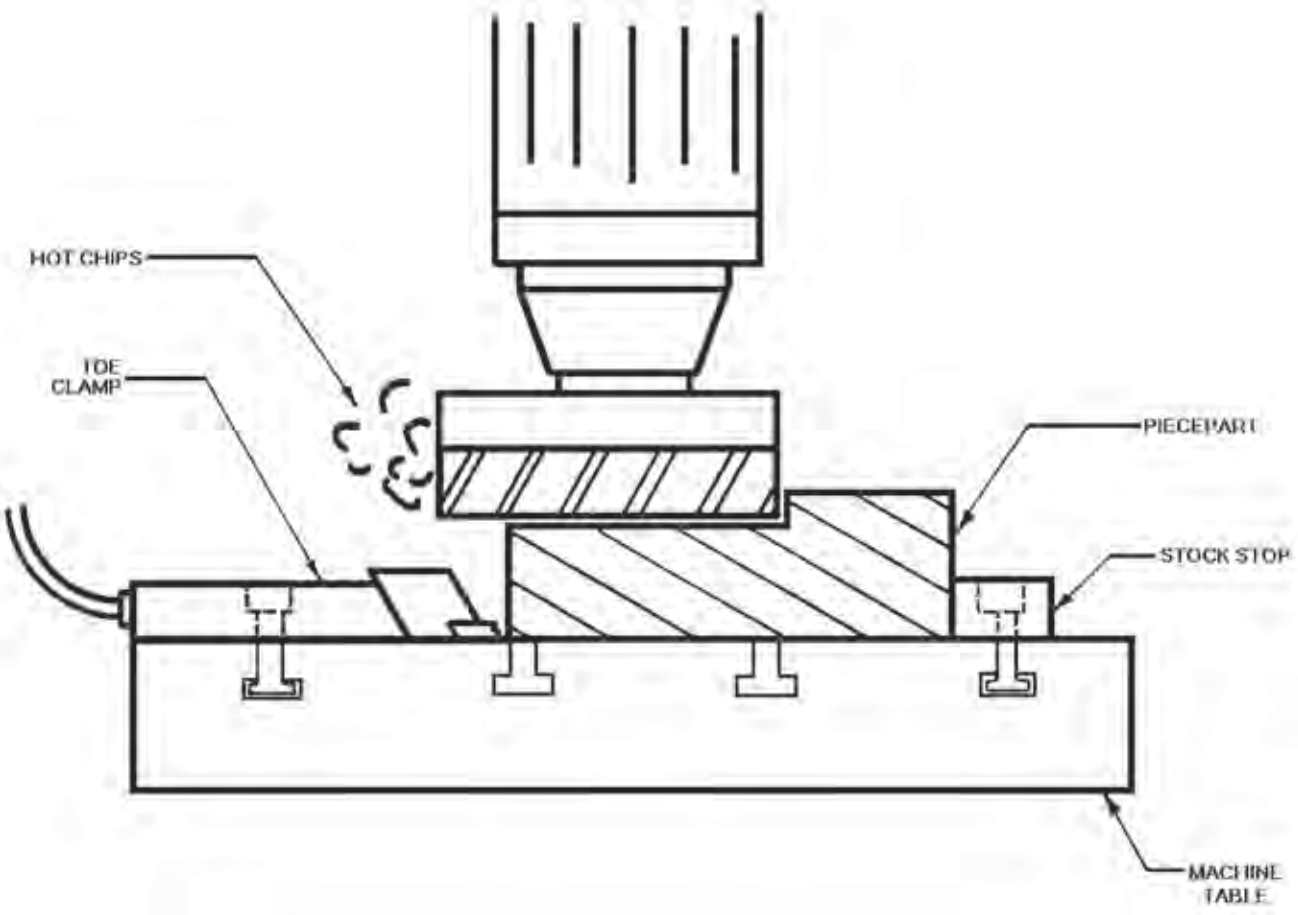
Part Number	Insert
60633	Steel
60632	Brass



Hydraulic Pressure	Force in Pounds	
	A	B
1500	900	750
3000	1800	1500
5000	3000	2500

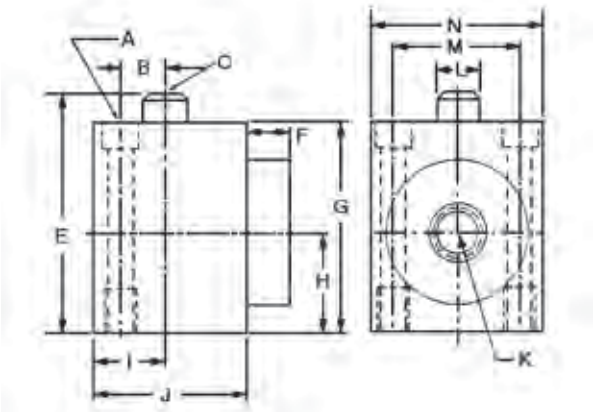
Inch to metric fittings available – see page 213.

Toe Clamp
Application



A Toe Clamp is used in applications where clamps cannot be on top of the workpiece due to the fact that the cutter must pass over that area. The clamp holds the workpiece against stop and down on the table. T-Slot mounting gives clamping versatility.

Work Supports



Part Number	Bolt Size Thru A	Bolt Size Tapped A	B	Tap C	Height E Min	Height E Max	F	G	H	I	J	Port K	L	M	N
60513	1/4	5/16-24	.50	1/4-20	2.45	2.70	.49	2.36	1.12	.81	1.75	9/16-18	.5	1.5	2

Hydraulically-locked Work Supports differ from clamps and vises in that they do not actually exert force upon the workpiece. Rather, they are used to support the part being machined, offering resistance to any clamping forces acting counter to the direction of travel of the piston.

In a typical application, a large, thin casting is located on several tooling point pads for positioning. Work Supports will automatically adjust to support the delicate sections of the casting. When hydraulic pressure is applied, the floating pistons within the Work Support are locked in position and resist any downward movement exerted on the casting. After the casting is removed, the floating pistons return to their fully-raised position.

Specifications

Part Number		60513	60512

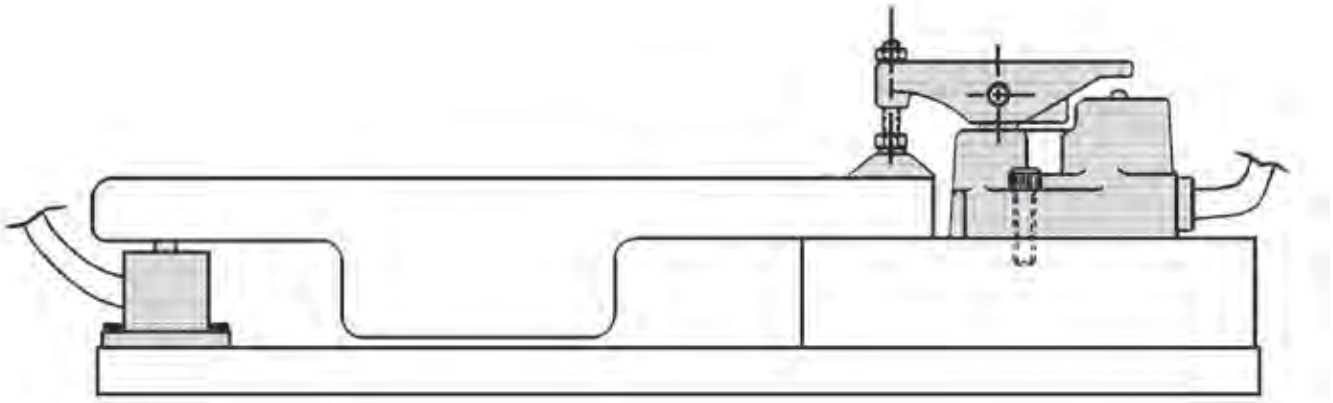
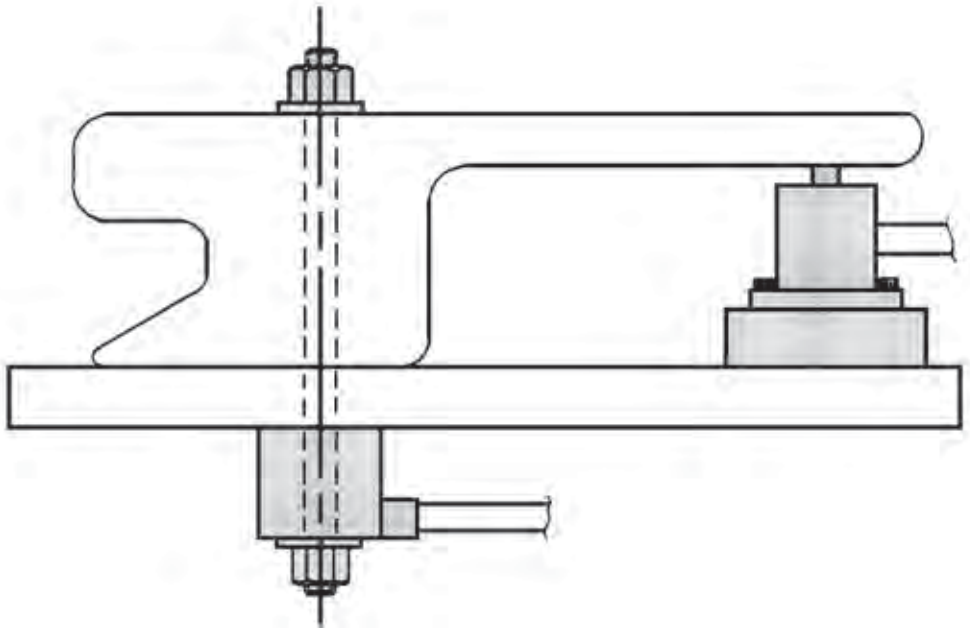
Work Support
Applications



The workpiece is located and clamped on the right end by a Jergens Swing Clamp. The Work Support resists the machining forces applied to the other end of the casting. Variations between castings are compensated for by the floating support plunger in the Work Support.



The top and bottom surfaces of the large casting must be machined to be flat, parallel, and at a fixed distance from each other. Jergens Work Supports eliminate deflection at the outer edge while compensating for variations between castings. A Jergens Hollow Rod Cylinder, stud and “C” washer are used to hold the casting.

Hollow Rod Cylinders

Hollow Rod Cylinders are ideal for converting existing fixtures to power clamping. Replaces clamps which use double cams, flange nuts, draw bars, or other mechanical devices. Generally, no special machining is required, just a longer stud.

* With Spring Installed

Hollow Rod Cylinders can either push or pull. Two styles are available, either Through Hole or Tapped Hole. In the Through Hole style, the piston rod is hollow to accept a bolt. The Tapped Hole cylinders accept a bolt threaded into the piston. Because of the piston design, the Tapped Hole style cannot gain stroke. Removing the return springs make the Hollow Rod Cylinders suitable for air operation.

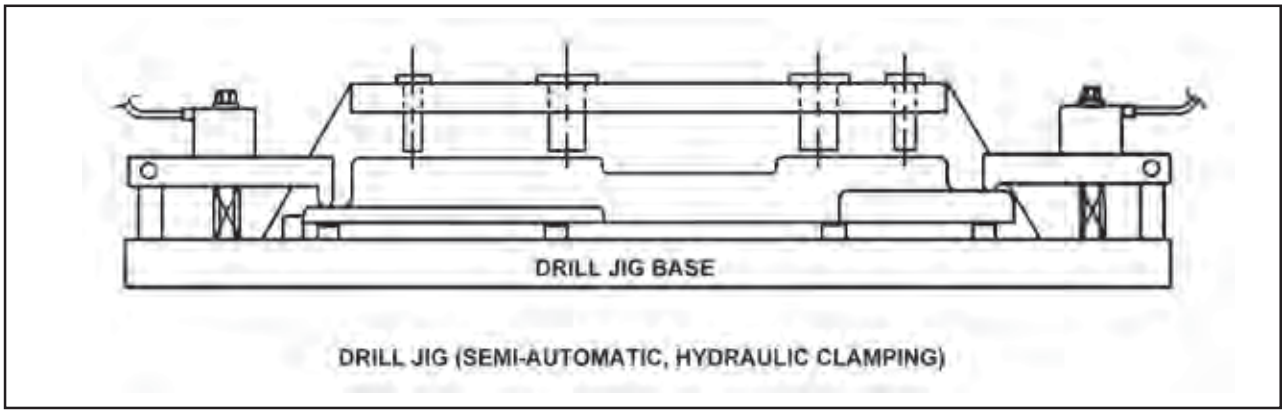
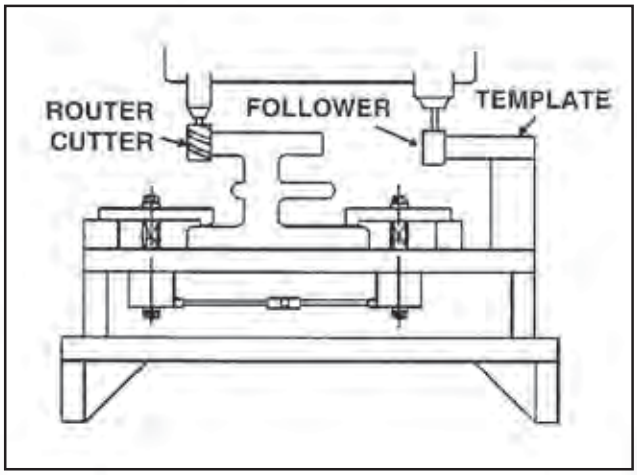
Hollow Rod Cylinder
Applications



DRILL JIG (SEMI-AUTOMATIC, HYDRAULIC CLAMPING)

Typical, low cost conversion from manual clamping to Hollow Rod Cylinders can be accomplished by using the existing drill jig clamps and changing the stud to a longer length. Besides clamping faster than the manual method, the Hollow Rod Cylinders allow for uniform clamping forces on all strap clamps.



The Hollow Rod Cylinder is ideal for “close to the machine base” strap clamping. By mounting the clamps under the work table, a manual clamping set-up can be easily and economically converted to hydraulic clamping.

Threaded Cylinders
Pressure Points

Jergens Pressure Points may be used with any power source and are designed to be used in restricted areas where space is at a minimum. Pressure Points can be used to eliminate part distortion during machining operations or to hold large diameter castings or rings in place while machining the upper surface. Pressure Points have hardened tool steel tips (50-60Rc). Jam nuts are included. Not suitable for air operation.

Threaded Cylinders
Heavy-Duty

Full-threaded bodies ensure easy mounting and simple length adjustments. Their small size provides high work holding forces in tight places. Threaded Cylinders have hardened piston rods, steel bodies, alloy springs and Teflon® back-up rings which ensure trouble-free operation and long life. Not suitable for air operation. For mounting, see bracket and jam nuts on page 167.

Standard Cylinders
Single Acting

These single-acting, spring-return cylinders will operate on air or oil; all have a 1" stroke.

Single-acting cylinders are especially applicable to large circuits where cylinders are plumbed into the air side of the circuit and used to align parts in the fixture prior to hydraulic clamping. These applications are primarily pushing type operations where the cylinder return spring pulls only the piston rod.

- Available in Fixture Pro® Design Software

NOTE: Not recommended for applications where coolant or chips are prevalent. Use double acting style (next page) for these applications

Standard Cylinders
Double Acting

Double Acting Cylinders can be used for clamping, holding positioning, staking, punching...anywhere that a heavy duty cylinder is needed. If the cylinder is mounted in the fixture (as opposed to using mounting brackets), the fixture should be bored to between .0005 and .0010 over the "A" dimension. Doing so will prevent an out-of-round condition of the cylinder body which could damage the piston. They may be returned by air or by hydraulic pressure.

Standard Cylinders
Mounting Brackets

Mounting Brackets are designed to save you time and money when laying out your fixture.

All Mounting Brackets are made of low carbon steel, which is not heat-treated. This allows you to custom fit or weld the brackets into your fixture. The cylinder clamping area is concentric to the OD of the various cylinders to avoid distortion of the cylinder walls which may cause damage to the piston.

Spacers may be used to add height to the cylinders when using Jergens Mounting Brackets.

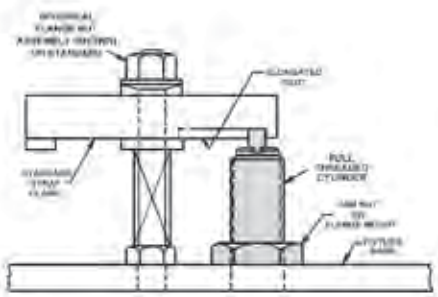
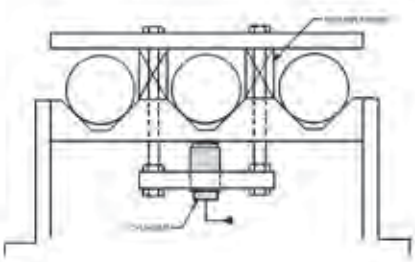
Threaded Cylinder
Applications

By replacing step blocks or similar mechanical devices with a threaded cylinder, manual clamping is easily adaptable into a more productive hydraulic clamping set-up.

This principle of "building block" components can be combined with various Jergens cylinders, standard components and mounting blocks or strap clamps; thus allowing an almost infinite method of production clamping.

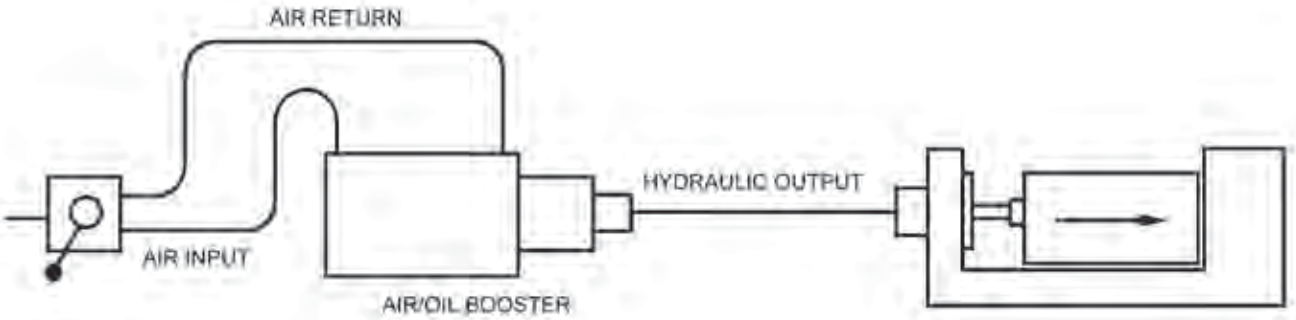




Standard Cylinder
Applications

Holding Fixture

A Single Acting Cylinder is used to locate and clamp the workpiece in a channel fixture. The cylinder rod automatically returns when the booster pressure is released.



Vise Fixture

A Double Acting Cylinder is being used to operate a Vee Jaw in the above fixture. Hydraulic pressure is used to clamp and unclamp the jaw. Air pressure, used to return the Double Acting Cylinder, is connected to the air return line of the Booster. Jergens Double Acting Cylinders will operate with as little as 10 psi of air pressure or up to 3000 psi of hydraulic pressure.

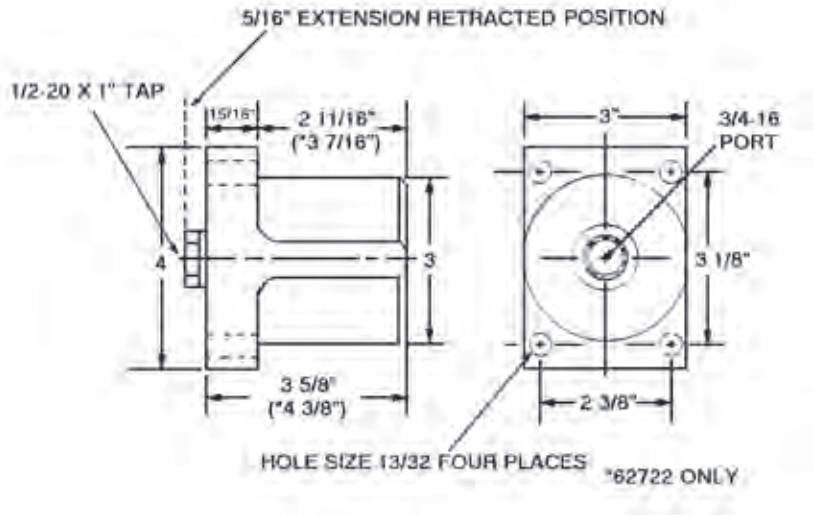
Flange Mount Cylinders



- Easy Mounting
- Heavy Duty
- High Output Forces
- Long Lasting
- Available in Fixture Pro® Design Software

The Jergens Heavy Duty Flange Mount Cylinders mount through holes on the flange of the cylinder body. This feature eliminates the need for separate mounting brackets. The cylinders can provide high forces for clamping, lifting and pressing. Not recommended with flood coolant applications.

Specifications

Inch to metric fittings available – see page 213.

Intensifier Cylinders

Intensifier Cylinders are combination air-hydraulic cylinders. An air powered cylinder is driven into a small oil reservoir which produces a nominal 8:1 or 30:1 power boost ratio, depending upon air pressure and the cylinder used. These miniature, self-contained power sources are ideal where fast action (100 operations per minute), a short stroke and high power are needed.

- 8:1 and 30:1 Boost Ratios
- Self-Contained
- Fast Acting
- Air Controlled
- Easy Recharge Without Disassembly
- Available in Fixture Pro® Design Software

For Mounting Brackets see page 170.

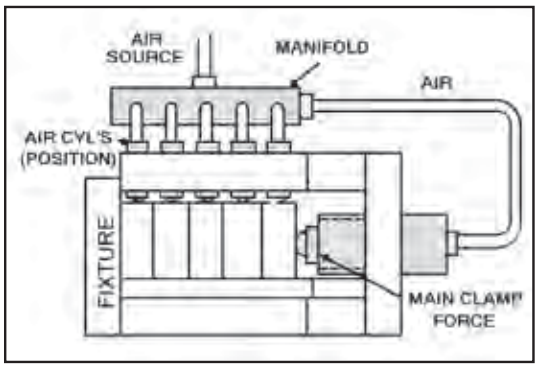
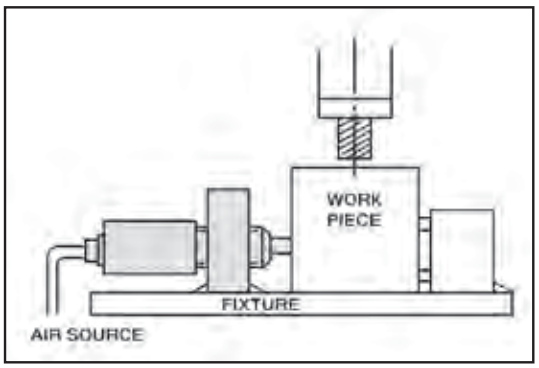
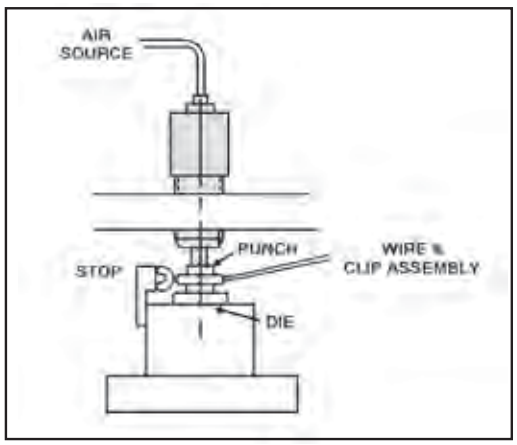
Intensifier Cylinder
Applications



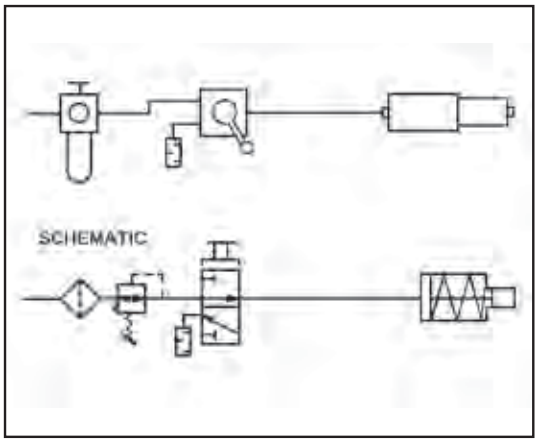
Positioning
A series of plates are gang loaded into the fixture. Air operation of the intensifier assures fast and positive positioning of the plates, after which the multiple hydraulic cylinders are used to clamp.



Clamping
Installed in a Jergens Mounting Bracket, the Intensifier Cylinder provides efficient, versatile, yet economical clamping.



Crimping
The intensifiers may be installed at any attitude. Mounted in a vertical attitude (as shown), up to 1 1/2 tons of force is available for crimping, punching, or notching.



Circuit Diagrams
A filter/regulator and a 3-way hand valve are all that is required to control an Intensifier Cylinder. Installation is as simple as an air cylinder but the resulting force is much greater.

How to Design Your Own Hydraulic System

1. Calculate the force used to hold the workpiece during machining.
   To convert the torque applied to a fastener into holding force use the following formula:

$$P = \frac{T}{KD}$$

Where: P = Holding Force (lbs.)
T = Torque (in. lbs.)
D = Nominal Thread Diameter (in.)
K = Friction Factor
(K Varies with material, finish, and lubrication, .19 to .25)

Example: 1/2-13 bolt tightened to 30 ft. lbs
(360 in. lbs.) provides 3600 lbs. of force.

$$P = \frac{360}{(.2 \times .5)} = 3600$$

2. Calculate the force required at each work unit.

$$\frac{\text{Total Force}}{\text{Number of work units}} = \text{Force per unit}$$

3. Select the style of work unit to be used at each location. Select units which can be easily mounted and will allow access for loading and unloading of the workpiece.

4. Compare the force required by each work unit with the maximum force available from the unit selected. If the required force is greater than the available force, substitute larger work units or increase the number of work units to be used.

5. Calculate the hydraulic pressure required to provide the force needed at each work unit. To determine pressure, divide the force required at the work unit by the effective piston area of the unit selected.

$$\frac{\text{Force}}{\text{Area}} = \text{Pressure}$$

   The unit requiring the highest pressure determines the requirement for the entire system.

6. Determine the total volume of oil required to operate all of the work units (Volume = Piston Area x Stroke). Operating volume requirements for work units are listed in the specifications chart for the item.

7. Select a power source which will provide the required pressure, using the available air pressure. To determine if a power source will provide the required pressure from available air pressure, multiply the available air pressure by the boost ratio of the power source.

   Example: (90 psi air pressure) (15:1 boost ratio) = 1350 psi hydraulic pressure

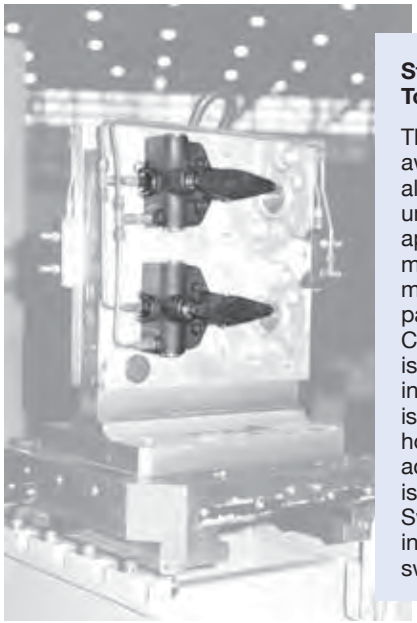
   The power source must also provide the total volume of oil required by the system. When using a standard booster, the high pressure volume of the unit must exceed the system requirement.

8. If you need help, call Jergens Technical Sales at: 1-877-426-2504.

Jergens WORKHOLDING SOLUTIONS GROUP

Staylock Clamps

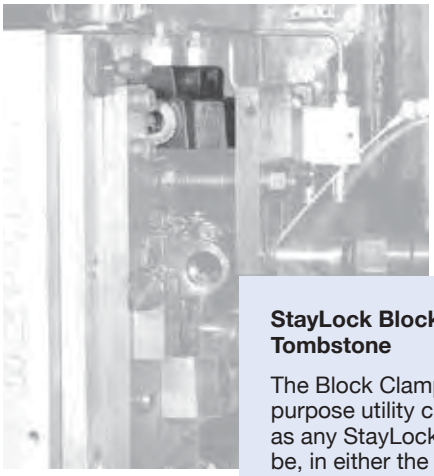
Stays Mechanically Locked– Even When Disconnected from Hydraulic Pressure



StayLock Swing Clamp on a Tombstone Fixture

The Swing Clamp rotates 80° away from the workpiece, allowing easy loading and unloading of the part. In this application, the tombstone is mounted on a double pallet machining center. When the pallet rotates, the StayLock Clamp remains clamped. There is no need for an accumulator in the hydraulic system. Nor is there a chance of hydraulic hoses getting tangled or accidentally cut while the part is being machined. StayLock Swing Clamps are available in left-hand or right-hand swing styles.

StayLock Clamps ...the Hydraulic clamp with the mechanical advantage! With conventional power clamping, when pressure is put to the clamp, it clamps... take the pressure away (on purpose or not), it unclamps. With the StayLock Clamp's patented internal locking mechanism, hydraulic pressure is needed to clamp...and to unclamp!

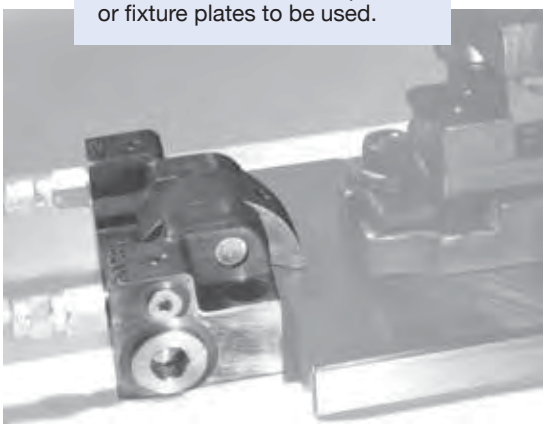


StayLock Block Clamp on a Tombstone

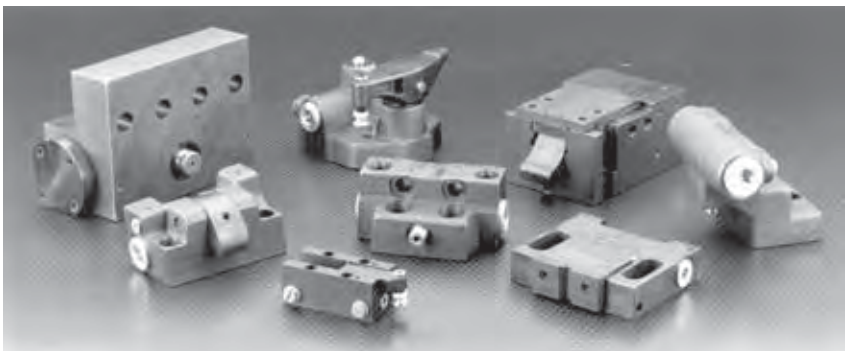
The Block Clamp is a multi-purpose utility clamp, utilized, as any StayLock Clamp can be, in either the horizontal or vertical clamping positions. In this application, the Block Clamp (at the top of the tombstone) is replacing step blocks and tedious manual clamping.

StayLock Rocker Clamp Holding a Die

The Rocker Clamp is ideal for quick change clamping on dies, molds, and fixture plates where a standard height subplate is employed. Because of the unique body design of the Rocker Clamp, it can easily be adapted with a T-slot nut mounted on the bottom. This enables the Rocker Clamp to slide in and out, making part removal easier, plus it allows for various widths of subplates or fixture plates to be used.



Staylock Clamps



Positive Mechanical Lock

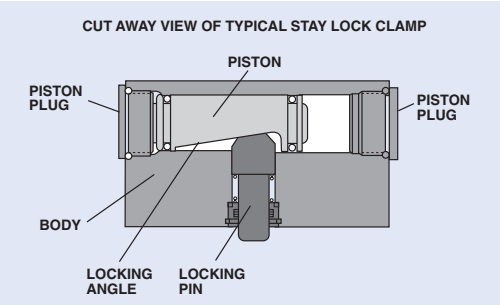
Jergens StayLock Clamps offer a breakthrough in clamping flexibility! These mechanically locked clamps are activated and released by hydraulic pressure. Once activated, the clamps automatically lock and will not release until hydraulic pressure is applied to the release port.

Once clamped, you can:
- disconnect your hydraulic power source
- move the fixture, with the part still clamped, to other machines
- not worry about your part unclamping due to hydraulic power failure, a cut line, or leaks in the hydraulic system

Patented positive mechanical lock minimizes:
- reclamping
- set-up costs
- parts accidentally becoming unclamped

Jergens StayLock Clamps can provide solutions to many clamping problems. They are designed for use on:
- palletized fixtures
- transfer machines
- machining centers
- any power clamping application
- quick change on molds and dies

Use the StayLock Clamps with Jergens Air-Operated Hydraulic Pumps (described on pages 197–198). One Hydraulic Pump can service several machines because there is no need to maintain hydraulic pressure when clamping StayLock Clamps. Once StayLock Clamps are in a clamping position, the hydraulic hoses can be disconnected, and the part will remain clamped indefinitely. Once the machining cycle is completed, applying hydraulic pressure to the release port unclamps the part.



Most Commonly Asked Questions

Q. Does the StayLock Clamp lose pressure?

A. No, it does not. Because of a patented mechanical lock, a positive locking wedge is activated when pressure is applied to the clamp port. There is no need to maintain hydraulic pressure; therefore, the power source can be disconnected. There is no pressure to lose.

Q. How do I lock StayLock Clamps in place?

A. Applying hydraulic pressure to the clamp port of a StayLock Clamp drives two internal wedges together. The two wedges form a mechanical lock and will not retract until hydraulic pressure is applied to the release port.

Q. Can these clamps be used with air?

A. No. Air pressure does not apply enough force to lock or unlock the internal wedge mechanism.

Q. How much hydraulic pressure is needed to activate the clamps?

A. The minimum pressure required on most of the StayLock Clamps is 500 psi. The minimum and maximum pressure requirements are specified for each clamp on the following pages.

Q. What is needed to set up a hydraulic system using StayLock Clamps?

A. Typically, a system includes several clamps (depending on individual requirements); a power source; a four-way, three-position, zero-leakage control valve (see page 201); and hydraulic hose and fittings. There is no need for an accumulator in the system.

Q. Can an air/oil booster be used with StayLock Clamps?

A. No. Boosters typically are used with standard hydraulic clamps because pressure is needed to activate and maintain the clamp in the clamping position. With a Booster set-up, there is only one hydraulic line that provides the pressure needed. StayLock Clamps need pressure to clamp and unclamp; therefore, a Booster would not provide the needed pressure to the release port to unclamp the part.

Q. Can I get technical assistance from Jergens when designing a StayLock Clamping system?

A. Yes. Jergens will assist you by providing a CAD schematic drawing of your system, including all of the part numbers needed to order the system.

For assistance, call 1-877-426-2504.

Jergens WORKHOLDING SOLUTIONS GROUP

Staylock Clamps

Die/Mold Clamps

Four models of Die/Mold Clamps are available. Part number 62801 provides 4000 lbs. of output pressure. It is only available in the T-Slot mounting style. The T-Slot mount allows the clamp to be mounted on a machine base via a T-Slot nut, thus allowing the clamp to slide to and from the workpiece. Part number 62802 provides 10,000 lbs. of clamping force. It employs standard mounting bolts for permanent mounting to the machine base, subplate, or fixture plate. Part number 62803 also provides 10,000 lbs. of clamping force. This clamp is provided with a Sensor Interlock which, when wired to a control panel, indicates whether the clamp is locked or not. Sensor Interlocks are available as an accessory for part numbers 62801 and 62802. Part number 62804 is similar to part number 62802, except it has a greater clamping range. It does not have mounting holes for the Sensor Interlock. Die/Mold Clamps are available with Viton® seals for high temperature applications.

Ideal for:

- Injection molding machines
- Die casting machines
- Punch presses
- Machining centers

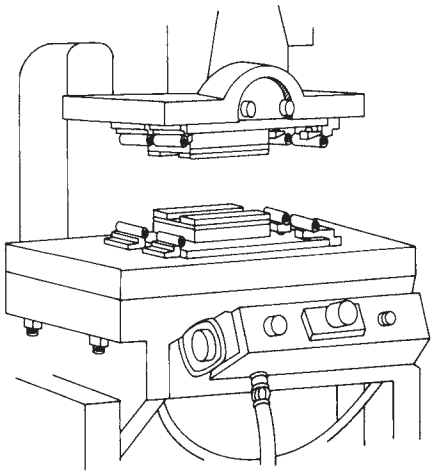
Staylock Clamps

Die/Mold StayLock® Clamp Applications

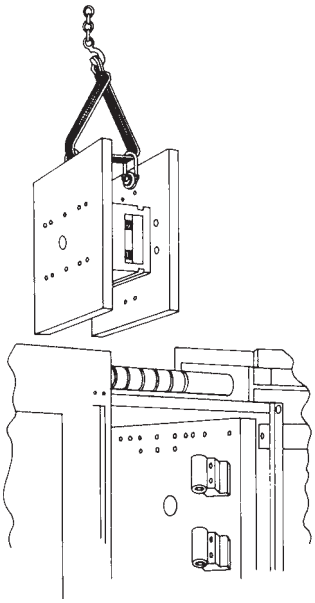
Punch Press



The Die/Mold Clamp is mounted (either permanently, or by using T-Slots) on the injection molding machine platen. The mold is mounted on subplates. By standardizing on subplates with the same height and width, several different molds can be used on one injection molding machine. The mold is lowered into the machine, the Die/Mold Clamps are activated, hydraulic connections are removed, and the job is run. A Sensor Interlock can be added to indicate to the operator that the Die/Mold Clamp is clamping. If molds are used that have a clamping slot, either a StayLock Retractable Clamp or a StayLock Rocker Clamp can be used.
Die/Mold Clamps are mounted on the Punch Press table either permanently or by using T-Slots. The top and bottom dies are slid into place, hydraulic connections are removed and the job is run.

At changeover time, the hydraulic quick disconnect fittings are reconnected, the die is removed and replaced with the next die, and the process is repeated. In some applications on punch presses, the Die/Mold Clamp may create a shut height problem. If this is the case, the StayLock Rocker Clamp is an excellent substitute.

Injection Molding Press

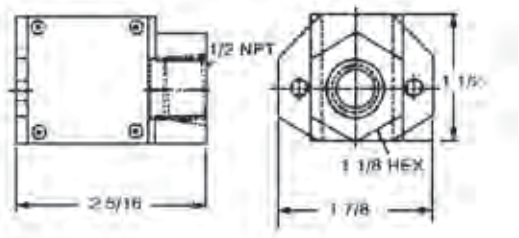


Sensor Interlock

- Available in Fixture Pro® Design Software

The Sensor Interlock (62816) can be mounted on the Die/Mold Clamp and is used to indicate that the clamping piston is engaged or disengaged. Because of the minimal movement of the clamping piston, some applications may require more than a visual method of determining if the Die/Mold Clamp is in the clamping position. The Sensor Interlock is a normally open, 110 volt, 6 amp switch. It is supplied with a six foot long wire and mounting hardware to mount in the control panel of a machine. The switch contacts on the Sensor Interlock will only close when the clamping piston is within the clamping range of the Die/Mold Clamp. It is included with Part Number 62803.

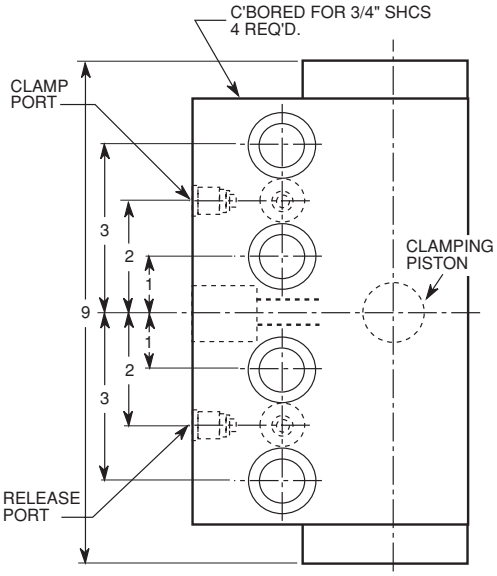
Part Number
62816



Staylock Clamps

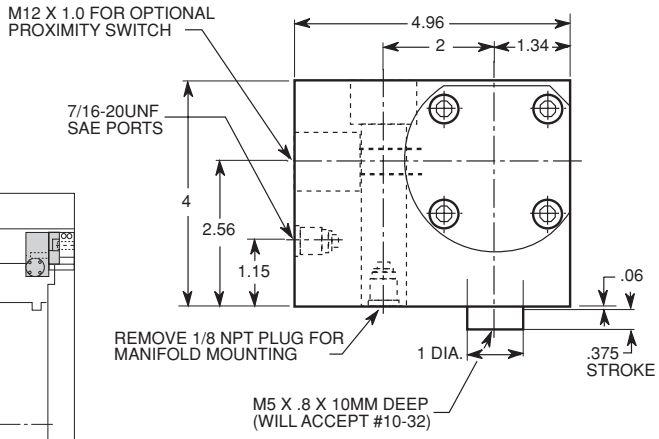
Large Capacity Mold Clamp

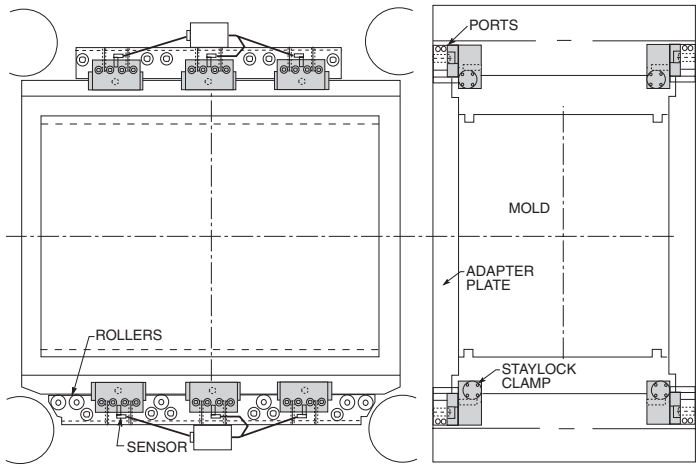
The Jergens Large Capacity Mold Clamp is used on molding machines and wherever heavy clamping forces are required. It has a clamping force of 28,000 lbs. The clamp can be mounted either individually or in series on a manifold.



Specifications

Part Number	62806
Operating Volume (cu. in.)	7
Minimum Operating Pressure (psi)	500
Maximum Operating Pressure (psi)	3500
Force to Pressure Ratio	8:1
Clamping Stroke	.38
Maximum Output Force (lbs.)	28,000
Weight (lbs.)	43





Typical StayLock Manifold Layout on Injection Molding Machine

Part Number
62817

Proximity Switch

The Proximity Switch indicates the clamp's piston position. A single switch is required for each Large Capacity Clamp. Stainless steel construction with 16' cord, 10-30 VDC.

Inch to metric fittings available – see page 213.

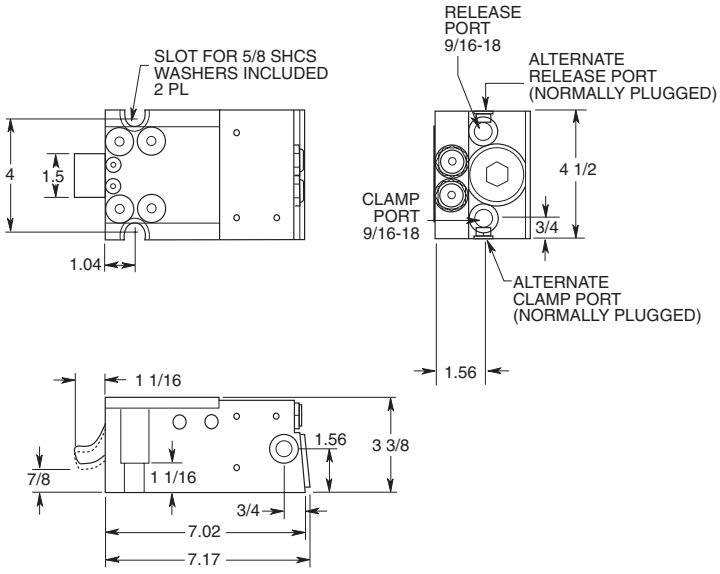
Staylock Clamps

Retractable Clamps

U.S. Patents:
No. 4,511,127
No. 4,471,293

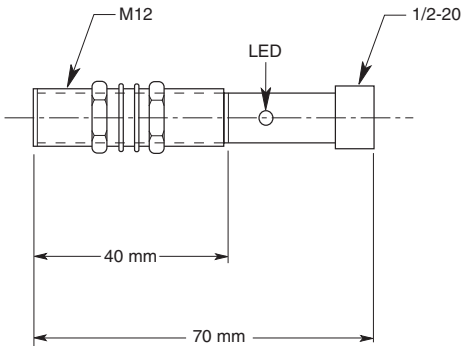
Jergens StayLock Retractable Clamps are designed to allow quick change of molds in injection molding machines and die casting machines. The locking arm, which retracts into the clamp body for easy loading and unloading of a mold, is adaptable to clamp many standard mold slots. The Retractable Clamp is double acting and includes alternate clamp and release ports for easier hydraulic plumbing set-up. A Proximity Switch, which indicates the Retractable Clamp is in the extended or retracted position, is also available (see below).

High temperature version available, contact Technical Sales for more information



Specifications

Part Number	62852
Operating Volume (in³)	1.6
Minimum Operating Pressure (psi)	500
Maximum Operating Pressure (psi)	2500
Force to Pressure Ratio	2:1
Clamping Stroke	.13
Maximum Output Force (lbs.) @ 2500 (psi)	5000
Weight (lbs.)	23



Proximity Switch

The Proximity Switch senses the position of the clamping arm within the Retractable Clamp. Two Proximity Switches are required for each clamp. They have a stainless steel housing and are mounted in the Retractable Clamp. One Switch senses the arm extended; the other, the arm retracted. A sixteen foot cord is included with each Proximity Switch, 35-250 VAC.

Part Number
62857

Inch to metric fittings available – see page 213.

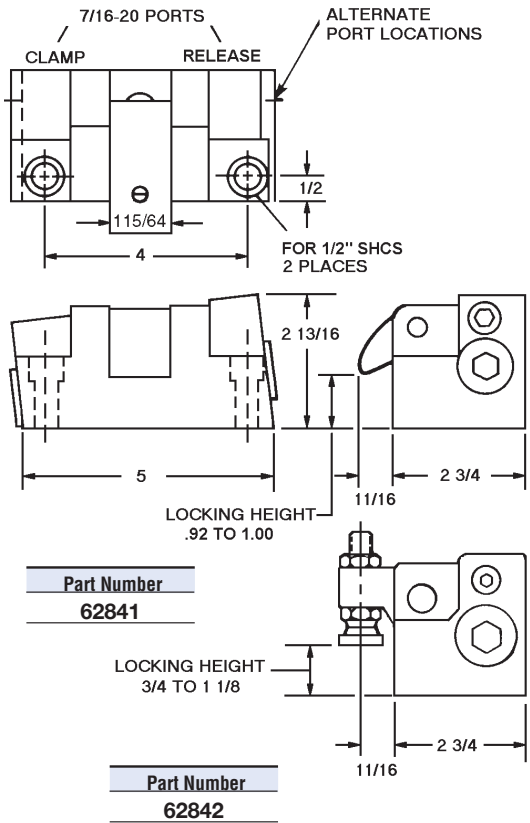
Staylock Clamps

Rocker Clamps

Part Number
62841

U.S. Patents:
No. 4,511,127
No. 4,471,293

Part Number
62842



Inch to metric fittings available – see page 213.

Compact design and dual mounting capability make the Jergens StayLock Rocker Clamp versatile for many applications. The Rocker Clamps come in two styles. Part number 62841 is typically used with standard height subplates upon which the die, mold, or fixture plate is mounted. Part number 62842 has an adjustable spindle which adapts to the height of the workpiece. Both styles of Rocker Clamps have drilled and tapped holes on the bottom of the clamp for mounting T-Slot nuts for use on slotted tables. This method of mounting allows the operator to slide the clamp to and from the workpiece for easier part loading and unloading. Bolt down mounting holes are also provided. For mounting applications, contact the Jergens Technical Sales Department. Ideal for:

- Holding dies on punch presses
- Molds on injection molding machines
- Dies on die casting machines
- Use on hydraulic fixtures
- Available in Fixture Pro® Design Software

Specifications

Part Number	62841	62842

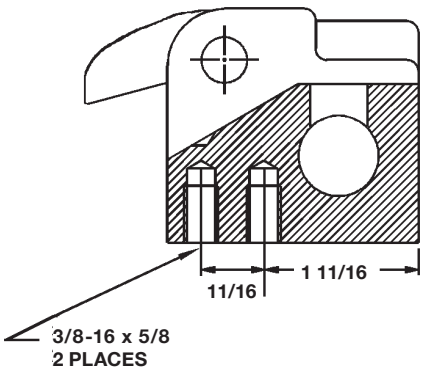
Maximum Output Force (lbs.) @2,000 psi	3,800	3,800
Weight (lbs.)	7.5	7.6

*After adjustment for height.

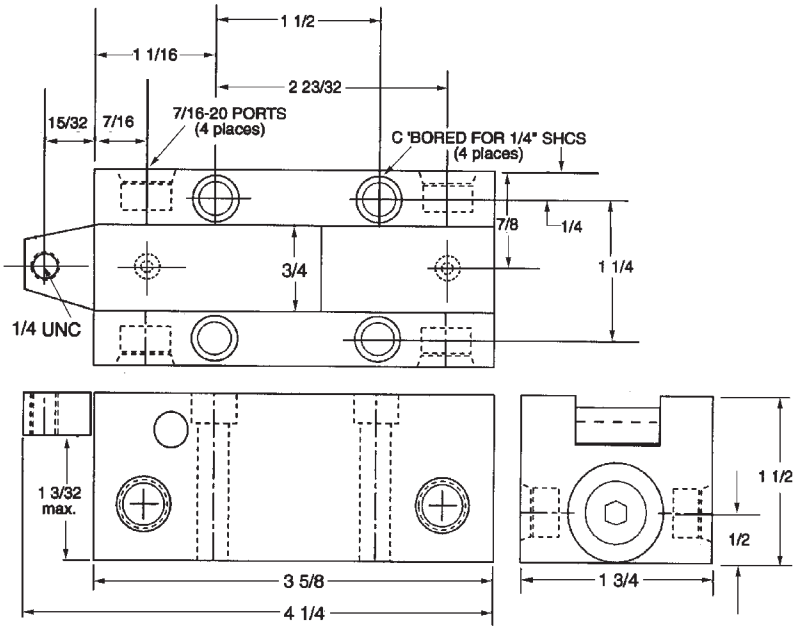


Mounting holes for T-Slot applications.

Staylock Clamps

Mini-Rocker Clamps

The StayLock Mini-Rocker Clamp is designed for small parts workholding. Like the other StayLock Clamps, the Mini-Rocker can be mounted at any angle. Clamping forces range from 200 lbs. to 700 lbs. The Mini-Rocker can be used as a single clamp; or because of its unique port arrangement, it can be manifold mounted.



Socket Toggle Screw

Part Number
33302

Set Screw/Jam Nut not included.

- Two special washers which prevent damage by the cap screws are included with each toe clamp. To order washers separately, order Part Number 60636.
- Toe is moved back by spring.
- Available in Fixture Pro® Design Software

Jergens StayLock Toe Clamps are designed for edge gripping of parts when the clamp height must be kept at a minimum, such as in a milling operation. They are available in Low Toe (62811) or High Toe (62812) styles.

Toe Clamps provide two directional clamping forces: one pushes the work-piece against a positive stop, the other pushes it down against the table or fixture. A brass or steel insert is available on the low toe style Toe Clamp. The inserts must be ordered separately.

IMPORTANT: Jergens 62811 Toe Clamp is supplied without toe insert. Please order one of the inserts below.

Part Number	Insert

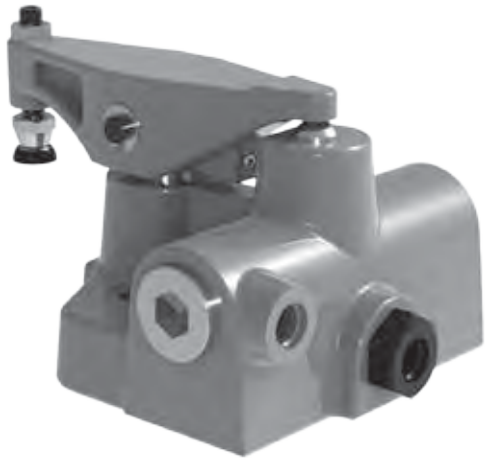
Jergens WORKHOLDING SOLUTIONS GROUP

Staylock Clamps

Swing Clamps (Metric)



U.S. Patents:
No. 4,511,127
No. 4,471,293

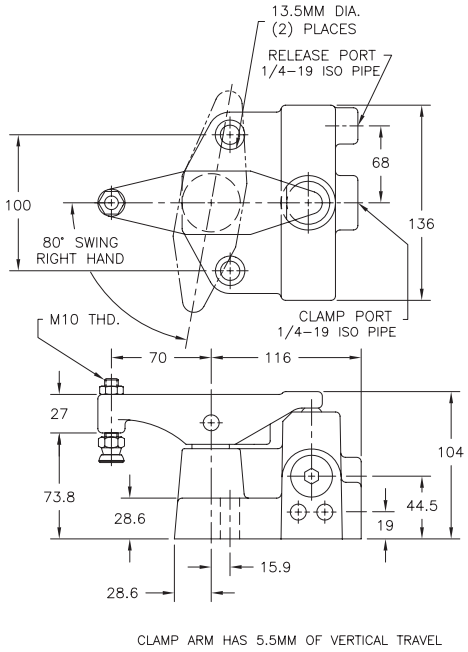
Specifications

Part Number (Right Swing)	63801
Part Number (Left Swing)	63802
Operating Volume (cm^3)	20.5
Minimum Operating Pressure (bar)	6*/7
Maximum Operating Pressure (bar)	200
Force to Pressure Ratio	8.5:1
Clamping Stroke (mm)	5.5
Maximum Output Force (kN) @ 200 bar	18
Effective Piston Area (cm^2)	8.6
Weight (kg)	5.5

*5.4 bar to swing, 7 bar to clamp.

Jergens StayLock Swing Clamps are designed to be used when accessible loading and unloading of a workpiece is required. The clamping arm rotates 80° away from the workpiece. The Swing Clamp operates in any position and is sealed so it can be used with coolant applications.

Important: When using the High Volume Air-Powered Hydraulic Pumps (61761 and 61762), the Flow Limit Valve (shown below) must be used to limit the flow of hydraulic oil going to the clamp port of the Swing Clamp. This will extend the life of the clamp by minimizing the clamp arm from slamming into the clamping position.



CLAMP ARM HAS 5.5MM OF VERTICAL TRAVEL

The Flow Limit Valve restricts the flow of oil to dampen the rotating action of the Swing Clamp. It is recommended that the Flow Limit Valve be used with the High Volume Air-Powered Hydraulic Pump (61761 or 61762). It is not needed with the lower volume "Shoebox" Pumps (61755 or 61756).

Flow Limit Valves

Part Number
63603

Jergens WORKHOLDING SOLUTIONS GROUP

Pre-Fill Boosters

- **Self Bleeding**
- **Easy View Reservoir**
- **15:1, 30:1, and 54:1 Boost Ratios**

These units offer many more advantages than conventional boosters, while maintaining the same basic simplicity. The pre-fill booster has two automatic cycles. The first cycle pre-fills the work circuit using low pressure with a large reservoir to provide volume. The second cycle then automatically provides high pressure, as needed. These units also provide automatic bleeding of the work circuit. This self-bleeding feature negates the need to "bleed the lines" after it is set up.

The pre-fill booster is ideal for any general use production system requiring maximum efficiency with minimum effort! Pre-fill boosters must be used in the upright (vertical) position.

- Installation Kits Available. See page 194.
- See page 191 for Rapid Exhaust and Rapid Advance Kits, Handles, and Mounting Bases.

Patent No. 3839866

Boosters Installation Kits

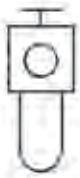
Jergens offers four kits to simplify the installation of your Jergens booster. The kits may be used with any Jergens booster.

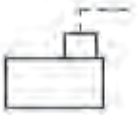
62203 — This kit is recommended for most applications. The kit includes everything needed to connect your air line to the booster and everything needed to connect the booster to your fixture.

62204 — This kit should be used when the protection of a pilot check valve is not required, as in punching or staking applications.

62205 — This kit is the same as kit 62203 except the hand valve has been eliminated. Use this kit when the system will be activated by a foot valve, solenoid or pilot operated valve.

62206 — This kit should be used for punching or other applications where no check valve is required and the system will be activated by a foot valve.



Filter/ Regulator 61617 (1)	4-Way Hand Valve 61615 (2)	Muffler 62613 (3)	Air Hose (18 Ft.) 61108 (4)	Pilot Check Valve 61629 (5)	Hydraulic Hose (6 Ft.) 61205 (6)	Quick Disconnect Couplings 61915 61965 (7)	Fittings as Req'd. (8)
See page 203	See page 204	See page 203	See page 214	See page 208	See page 214	See page 214	

Selection Data

Part Number	Items Included In Kit
62203	1, 2, 3, 4, 5, 6, 7, 8
62204	1, 2, 3, 4, 6, 7, 8
62205	1, 3, 4, 5, 6, 7, 8
62206	1, 3, 4, 6, 8

Jergens recommends the use of a gage kit with any standard booster.

Gage Kit

Part Number	PSI
60711	3000 psi
60712	6000 psi
60713	10000 psi

3 Second Clamping Kit

To simplify the installation of Jergens power clamps, Jergens offers its 3 SECOND Clamping Kit. The Kits contain everything required to convert your shop air pressure to hydraulic power for your clamping fixture.

61717 —This kit contains a 61711 booster, control valve, gage, hoses and fittings. This kit should be used for fixtures which will remain on a machine for long periods of time, such as a vise on a milling machine.

61719 —This kit contains a 61705 booster, control valve, filter-regulator, pilot check valve, quick disconnects and all hose and fittings required. This kit should be used on machines where the fixture changes frequently. The 61705 booster eliminates the need to bleed each fixture after it is connected. To change the fixture, simply switch the hydraulic hose from one fixture to the other using quick disconnect fittings.

Selection Data

Part Number	Included in Kit	
	Booster	Accessories*
61717	**61711**	2, 3, 4, 6, 8, 9
61719	**61705**	1, 2, 3, 4, 5, 6, 7, 8
61716	**61710**	2, 3, 4, 6, 8, 9
61718	**61704**	1, 2, 3, 4, 5, 6, 7, 8

*As shown on page 190.

Pre-Fill Power Pacs

Jergens Pre-Fill Power Pacs provide a complete portable power source. Everything required to power and control your hydraulic fixture is included. Connect your shop air to the filter/regulator, and your fixture to the hydraulic hose. The self bleeding feature and the hydraulic quick disconnects (provided) make these units the ideal power sources for job shops and production lines.

- Completely Assembled
- Self Contained
- Portable
- Self Bleeding
- Fast Set-Up

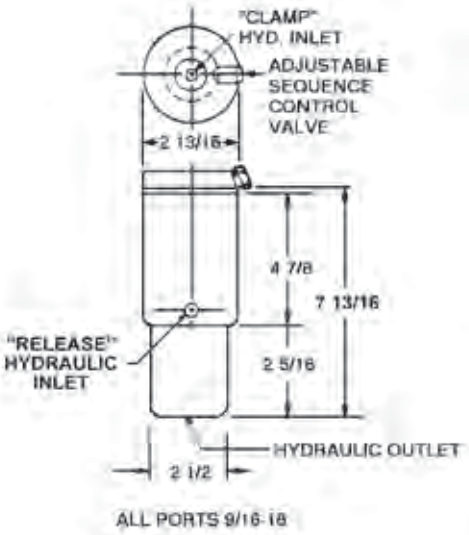
Hydraulic Intensifier

This unit is designed to be used on any machine tool with its own hydraulic system where higher pressures are needed. Jergens Intensifiers will pre-fill your circuit at approximately 200 psi maximum. Once the Intensifier sequences over to its high pressure mode, it will deliver one cubic inch of working oil at seven times the input pressure.

Specifications

Part Number	61701
High Pressure Volume (cu. in.)	1
Minimum Input (psi)	50
Maximum Input (psi)	710
Boost Ratio	7:1
Maximum Output (psi)	5000
Prefill (psi) Adjustments	50-200
Weight (lbs.)	4.4



Circuit Diagrams

Air-Powered Hydraulic Pumps

Shoebox™ Pumps

The "Shoebox" Pump is a low cost, compact unit used on smaller hydraulic circuits. Its small size offers the versatility of mounting on wheels (such as a workcart) and moving the pump from workstation to workstation. Like the High Volume Pump, this pump allows independent control of multiple workstations.

Jergens Air-Powered Hydraulic Pumps are used as a power source to activate Hydraulic Clamps. Shop air is introduced into the Filter/Regulator and converted to hydraulic pressure. These pumps are available in two styles: the High Volume Pump (61761 and 61762) with Boost Ratios of 20:1 and 50:1 and the standard, more compact "shoebox" pump (61755 and 61756) with Boost Ratios of 36:1 and 71:1. The Air-Powered Hydraulic Pumps are easy to use, energy efficient, versatile and affordable. They are completely self-contained and do not require any external reservoirs or motors.

NOTE: See page 201 for Valve and Subplate options.

Specifications

Part Number	61755	61756
Reservoir Capacity (cu.in.)	300	300
Minimum Input (psi)	25	25
Maximum Input (psi)	125	85
Boost Ratio	36:1	71:1
Maximum Output	4500	6000
Free Flow (psi) @100 psi (cu.in./min.)	100	50
Weight (lbs.)	24	24

A ten cubic inch accumulator (Part Number 62601) is available to increase the clamping speed if needed. Contact our Technical Sales Department for details.

Jergens WORKHOLDING SOLUTIONS GROUP

Air-Powered Hydraulic Pumps
Breadbox™ Pumps

High Volume Air-Powered Hydraulic Pump

The Jergens High Volume Air-Powered Hydraulic Pump converts standard and accessible low pressure shop air to hydraulic pressure up to 5000 psi. These pumps offer large reservoir capacities and allow independent control of multiple work stations. They are designed to provide high volume output throughout the pump's entire pressure range.

Specifications

Part Number	61761	61762
Reservoir Capacity (cu.in.)	440	440
Minimum Input (psi)	40	40
Maximum Input (psi)	125	100
Boost Ratio	20:1	50:1
Maximum Output (psi)	2500	5000

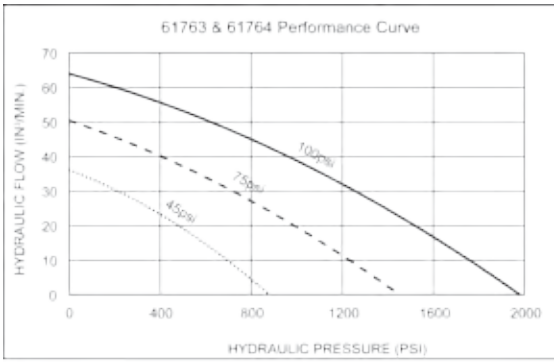
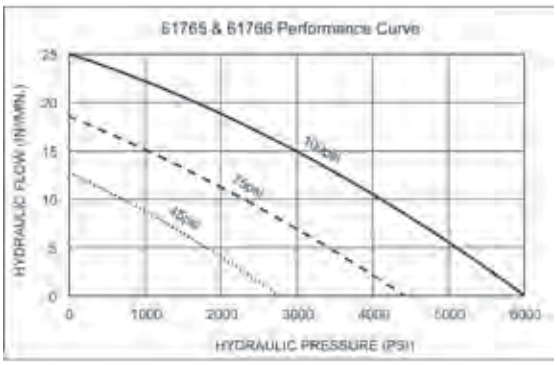
Air-Powered Hydraulic Pumps
C-Box Pumps





Inch to metric fittings available – see page 213.

C-Box Air-Powered Hydraulic Pump

- An economical and compact power source ideal for operating small volume hydraulic systems.
- Available in 20:1 or 60:1 Boost Ratios.
- Part No.'s 61763 & 61765 are specifically designed for operating single acting hydraulic systems. These models feature an air piloted pressure release valve. This allows a single acting hydraulic system to be controlled remotely with a simple 4-way air valve.
- All models include an air set-up kit (Filter-Regulator, Hose, Fittings). Part No.'s 61763 & 63765 also include a 4-way air valve.

Specifications

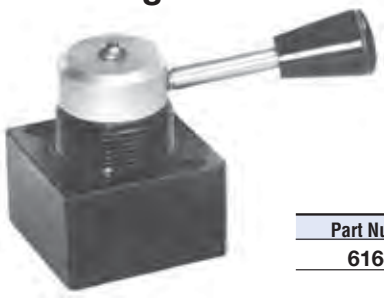
Valves and Subplates for Air Powered Hydraulic Pumps

Zero-Leakage Valve



Part Number
61642

For inline applications, use the 61642 Valve mounted on a 61646 Subplate (Order Part Number 61643). This set-up is also recommended for use with High Volume Air-Powered Hydraulic Pumps (61761, 61762) in StayLock and standard applications. For D03 manifold mounting, directly on the pump, the 61647 Subplate and 61642 Valve are recommended. Because the Jergens Air-Powered Hydraulic Pump provides only the necessary hydraulic pressure to clamp and unclamp the StayLock Clamps, the Four-Way, Zero-Leakage Valve is recommended to prevent the unnecessary running of the pump, thus minimizing pump maintenance and wear.

Subplate for Shoebox Pump

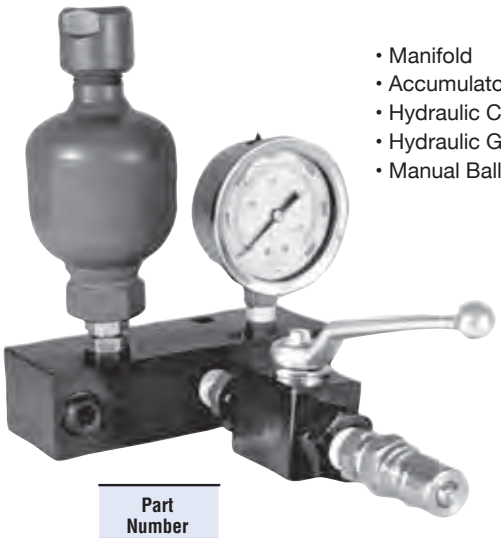
Pallet Decoupler Valve



Part Number
62605

- Manifold
- Accumulator
- Hydraulic Connections
- Hydraulic Gauge
- Manual Ball Valve

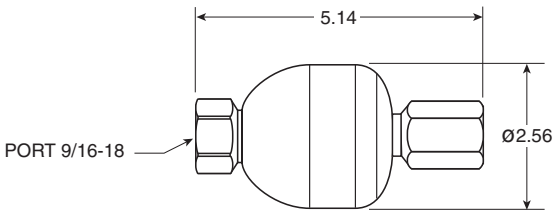
The Pallet Decoupler Valve allows hydraulically clamped tooling fixtures to maintain pressure when disconnected from their power source. The built-in pre-charged accumulator maintains pressure within a hydraulic system, compensating for slow leaks. The Pallet Decoupler Valve adds a level of security to fixtures that must be disconnected from a power source while being moved. Ideal for use with palletized fixtures and machining centers.

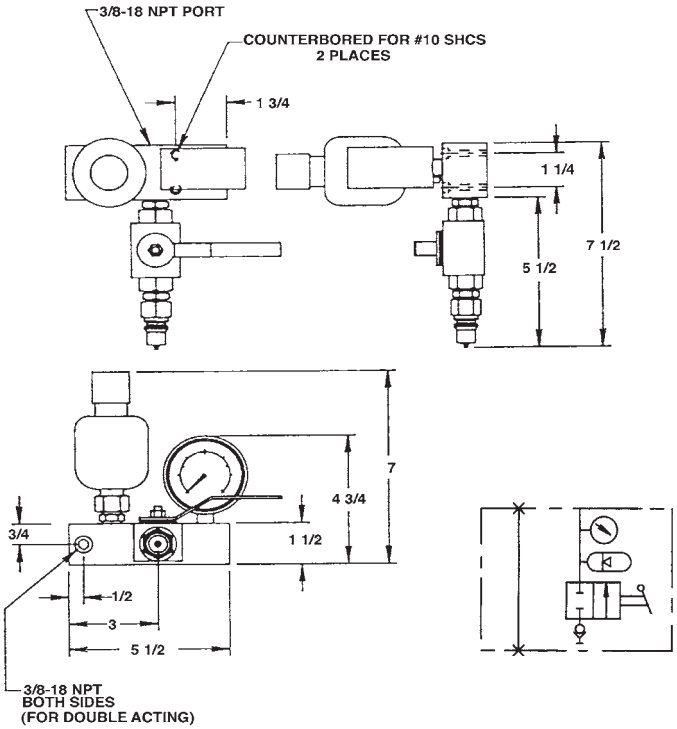
Part Number	Description
62605	Pallet Decoupler Valve Assy
62607	Pallet Decoupler Valve Kit, Single Acting Metric, Convert 62605 From Inch To Metric Fittings
62608	Pallet Decoupler Kit, To Add Quick Disconnects For Double Acting Inch Circuits
62609	Pallet Decoupler Kit, Double Acting, Converts 62605 Fitting And Disconnects From Inch To Metric

Accumulator

Part Number	Max. Pressure	Pre-Charge Pressure	Volume	Weight (lbs)
62603	3600 psi	1500 psi	5 cu. in.	1.5

*Other Accumulators and pre-charge pressure are available upon request.





To order components separately

Ball Valve	Male Quick Disconnect	Coupler Sleeve	Hydraulic Gage

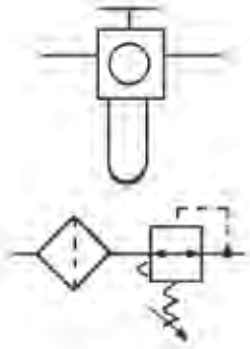
Air Circuit Controls

Filter/Regulators



The filter element removes the solid impurities and condensates before the compressed air enters the regulator. The regulator valve supplies a preset pressure regardless of main circuit pressure as long as pressure in the main circuit is higher than that in the secondary.

Specifications

Part Number	61616	61617
Port Size	1/4 NPT	3/8 NPT
SCFM Rating	53 SCFM	80 SCFM
Weight (lbs)	1.6	3.2

Gauges

When sizing a pressure gauge, the maximum output of the system should be approximately 2/3 of the gauge capacity.

Specifications

	160 PSI		
Part Number	60701	60702	60705
Thread Size	1/8 NPT	1/4 NPT	1/4 NPT
Location	Back	Bottom	Back
Weight (lbs)	.16	.25	.25

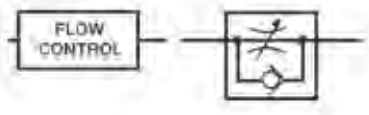
Mufflers

Used to reduce air flow noise. Installation is recommended at exhaust ports of Air Control Valves.

Specifications

Part Number	62612	62613
Thread Size	1/4 NPT	3/8 NPT
Weight (lbs)	.06	.22

Flow Control Valve



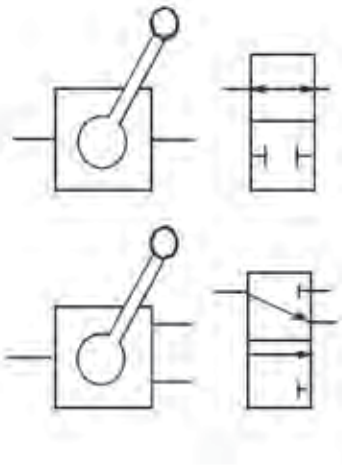
Manually adjusted control of input pressures. Allows the regulation of pressures into a work circuit. Reverse flow is unrestricted. Used for throttling or metering a circuit so that actuator speed meets work requirements.

Specifications

Part Number	61603
Port Size	1/4 NPT
Weight (lbs)	.31

Air Circuit Controls

2-Way and 3-Way Valves

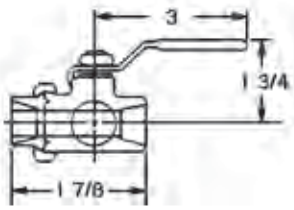


Specifications

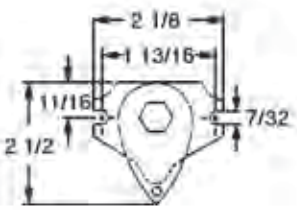
Part Number	61601	61634
Type	2-way	3-way
Port Size	3/8 NPT	1/8 NPT
Weight (lbs)	.81	.22

2-way valves are in-line ball valves. They are used as a shut-off valve in simple circuits.

3-way valves are similar to 2-way valves but have a third port which is generally used as a vent or exhaust.

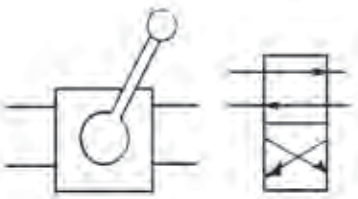


Part Number
61601



Part Number
61634

4-Way Valves

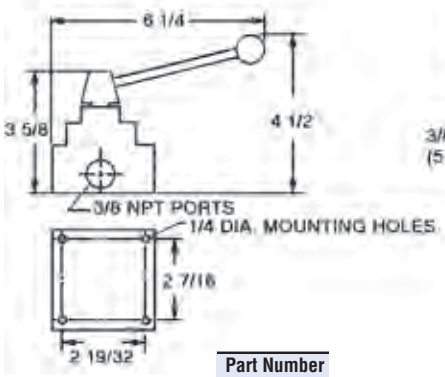


A variety of directional control valves are offered. Manual valves are normally two position, detented. Solenoid valves are 115V-60 Hz; other voltages are available.

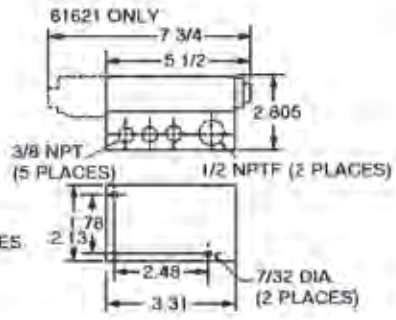
Specifications

Part Number	61615	61620	61621	61630	61631*
Actuator Type	Hand	Solenoid	Solenoid	Treadle	Pedal
Return Actuator	Hand	Spring	Solenoid	Treadle	Spring
Port Size	3/8 NPT	3/8 NPT	3/8 NPT	3/8 NPT	3/8 NPT
CV Rating	1.5	1.0	1.0	2.3	2.3
Weight (lbs)	2.75	5.0	5.5	4.0	3.5

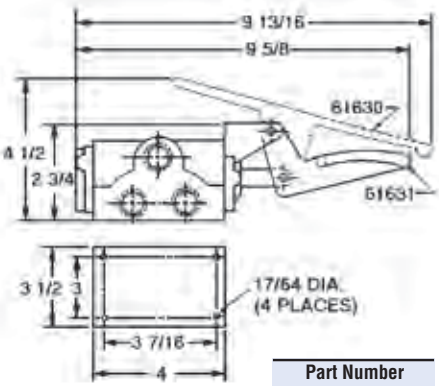
*Foot Guard for 61631 Valve; Part Number 61632



Part Number
61615



Part Number
61620 & 61621



Part Number
61630 & 61631

Air Circuit Controls
2-Hand No Tie Down

Requires the operator to use both hands when activating a work circuit. Two counterbored finger buttons are installed at a minimum center distance.

Specifications

Part Number	61304
Medium	Clean, dry compressed air only
Working Range	50 to 100 psi
TemperatureRange	-30° to 180°F
Air Flow (with Modular Valves)	10 CFM at 100 psi
Exhaust	To atmosphere through holes in plate
Mounting	7/32 holes provided in subplate
Materials	Clear Acrylic, brass
Filtration	40 Micron required
Lubrication	Recommended

Hydraulic Circuit Controls
Gauges

Recommended as a visual pressurized monitoring gauge to be used on all pressuring systems.

When sizing a pressure gauge, the maximum output of the system should equal approximately 2/3 of the gauge capacity.

Gauges are filled with glycerine in order to dampen internal movement.

Gauge blocks facilitate the installation of pressure gauges on standard boosters.

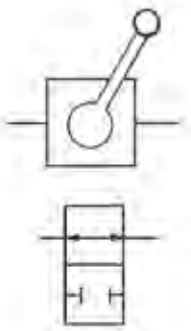
Selection Data

	Part Number		
	3000 Psi	6000 Psi	10000 Psi
Gauge Only	60704	60703	60706
Block Only	61055	61055	61055
Gauge Kit*	60711	60712	60713

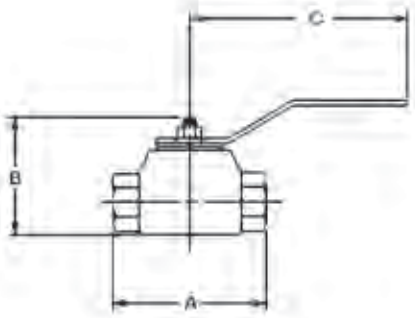
* Gauge, Block and Fittings included in kits. All Gauges 1/4" NPT, bottom ported.

Hydraulic Circuit Controls

2-Way Valves



2-way valves are in-line ball valves. They are used as a shut-off valve in simple circuits.



Specifications

Part Number	61610	61639
Port Size	1/4 NPT	3/8 NPT
Pressure Rating (psi)	3000	5000

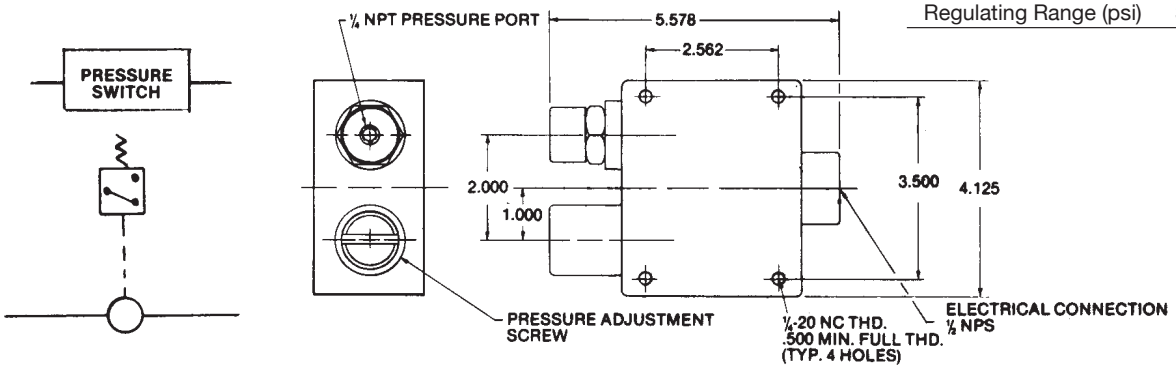
61644	2 3/8	—	—	8 3/16

Pressure Switch

Senses pressure in a circuit and may be used to start or shut down a system. A pressure switch can be used to remove the cutting tool and turn off machine in the event of loss of clamping pressure.

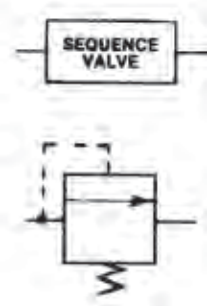
Specifications

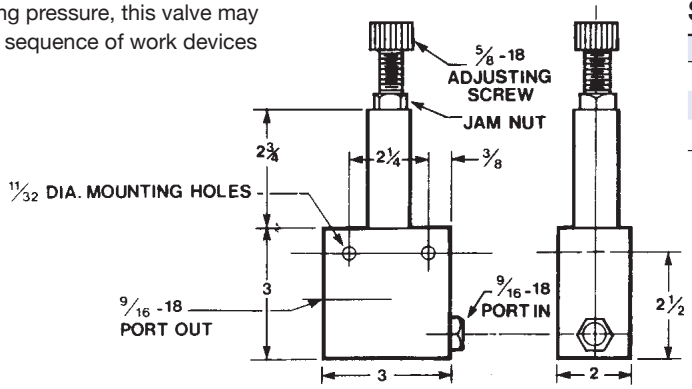
Part Number	61633
Port Size	1/4 NPT
Pressure Rating (psi)	10000
Regulating Range (psi)	350-5000



Sequence Valve

With adjustable opening pressure, this valve may be used to control the sequence of work devices in a common circuit.





Specifications

Part Number	61640
Port Size	9/16-18
Pressure Rating (psi)	5000
Sequence Range* (psi)	500-3000

* Factory Adjusted to sequence at 1000 psi.

Pilot Operated Check Valve

Specifications

Part Number	61629
Hydraulic	
Ports	3/4-16
Pilot Port	7/16-20
Pressure Rating (psi)	5000

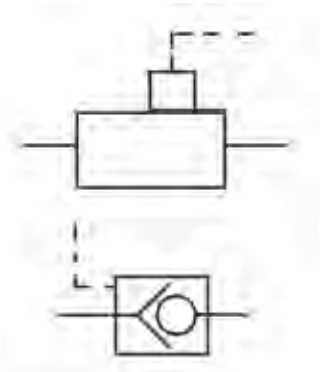
- Minimum operating pressure 500 psi
- 50:1 differential pressure
- Pilot not to exceed 125 psi

A two-way valve used to lock pressure in a working circuit. Automatic free return flow is provided via air pilot operation. Designed so that loss of shop air line pressure will have no effect on the hydraulic circuit in booster applications.

Specifications

	Part Number
Valve only	61629
Valve with Installation Kit	62211*

* Includes hose, fittings and valves



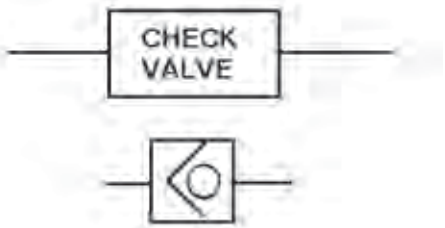
Hydraulic Circuit Controls

Check Valve

Specifications

Part Number	61607
Port Size	3/8 NPT
Pressure Rating (psi)	5000
Flow Rating	CV .83
Weight (lbs)	.63

Allows pressure flow in one direction only.



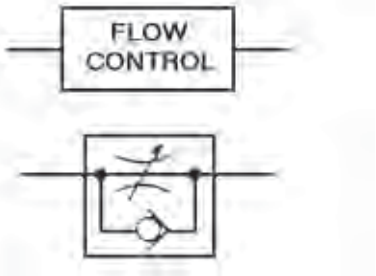
Flow Control Valve

Specifications

Part Number	61609
Port Size	3/8 NPT
Pressure Rating (psi)	5000
Flow Rating	CV .78
Weight (lbs)	.63

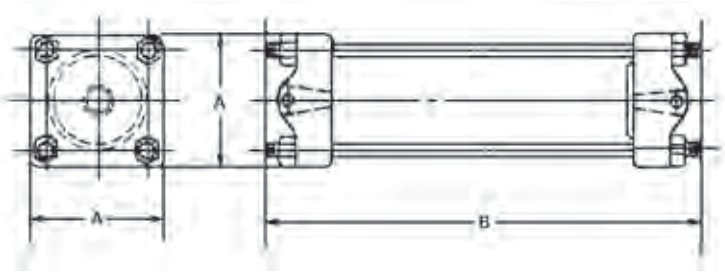
- Recommended for use with Jergens Swing Clamps

Used to control the flow of pressure in a system, to slow the movement of individual cylinders, or decrease shock.



Oil Reservoirs

Can be used with air pressure on top of oil to do work in your system, such as returning double acting cylinders with hydraulic pressure. The acrylic reservoir allows easy monitoring of oil level. Special baffle plates in the top of the reservoir distribute incoming air pressure evenly against the top surface of the oil.



Part Number	A	B	Capacity (Cu. In.)	Side Ports	End Ports	Wt (lbs)
61750	2 7/8	9 1/2	18	9/16-18	9/16-18	3.0
61751	4 13/16	8 1/2	55	NONE	9/16-18	6.8

• Maximum air operating pressure rating 125 PSI.

Inch to metric fittings available – see page 213.

Hydraulic Fluids

Hydraulic Oil
Jergens Hydraulic Oil is specially formulated to minimize foaming and to protect metal parts from rust. It is an aircraft type oil with high wetting out and film strength characteristics.

Its viscosity is 170/190 at 100˚F and it maintains functional characteristics down to 25˚F below zero.

One Quart.....**60801**
One Gallon.....**60802**
Five Gallon.....**60803**
55 Gallon Drum **60804**

Food Grade Hydraulic Oil
Jergens Food Grade Hydraulic Oil is a blend of food grade lubricants designed for use as a hydraulic media in food packaging and other similar equipment. It is composed of 100% chemically produced synthetic lubricants and contains no petroleum hydrocarbons.

Its viscosity is 140 SUS at 100˚F and 725 SUS at 35˚F.

Installation Tips for Plumbing Hydraulic Systems

Hose

The use of hydraulic hose is only recommended when the need for flexibility exists. Generally, the only hydraulic hose in an application is that used to connect the power source to the fixture.

All hydraulic hoses expand under pressure. This uses costly energy as well as volume. Some hoses expand at a greater rate than others, even though size remains the same.

Generally speaking, an 8 foot length of hydraulic hose will expand at a rate absorbing one cubic inch of high pressure oil at 3000 p.s.i.

When applying hose, the following is recommended:

Do Not:
- Overextend bend radius of hose.
- Put unnecessary strain at fitting ends.
- Subject hose to abrasive conditions.
- Use hose that hasn't been identified.

Do:
- Use a minimum size of 3/8" I.D.
- Check with factory for alternate brands.
- Use firesleeve protective covering in applications where flame is present (like weld fixtures).
- Make sure power source has enough high pressure volume to compensate for hose expansion.

Tubing

Whenever possible use 3/8" diameter steel fluid line tubing for hydraulic lines. This is a low carbon, soft tube and readily available. Depending on the application, two types are recommended:

- 3/8" diameter x .049 wall thickness for pressures to 3000 p.s.i.
- 3/8" diameter x .065 wall thickness for pressures to 5000 p.s.i.

When rigid tubing is applied to air circuitry, use copper tube. This will reduce the corrosive effect of water most likely found in your air lines. Caution: Do not use copper in a high pressure hydraulic circuit!

Fittings

Pipe Thread Fittings

Upon installation, apply a good sealing compound on threads of fitting only. When Teflon tape is used, overlap threads 1-1/2 to two turns tightly in direction of thread. Be careful not to extend tape over end of fitting. Do not overtighten pipe threads as they may put unnecessary strain on pressure vessels.

Straight Thread Fittings (SAE J514)

These fittings require no sealing material as the built-in o-ring provides a positive seal. The threads are a Class 2 straight thread with no taper. Before installation, be sure to lubricate the o-ring. Tighten these fittings to approximately 50-150 ft./lbs.

The Tube Flare

Cut tube squarely and remove any burrs. Split flares may be caused by the tube being too hard, opening up of scratches and draw marks, or failure to deburr tube end.

Place nut, then sleeve onto tube with open end of nut and toe end of sleeve toward end of tube.

Flare to standard 37° angle (maximum diameter of flare is equal to maximum diameter of sleeve). A correct flare should extend beyond the inside diameter of toe on sleeve but not beyond outside diameter of toe on sleeve.

Never attempt to spring tube to force alignment using the fitting installed. This can damage the flare and wrinkle, kink or flatten the tube. This can be avoided by using the correct tools.

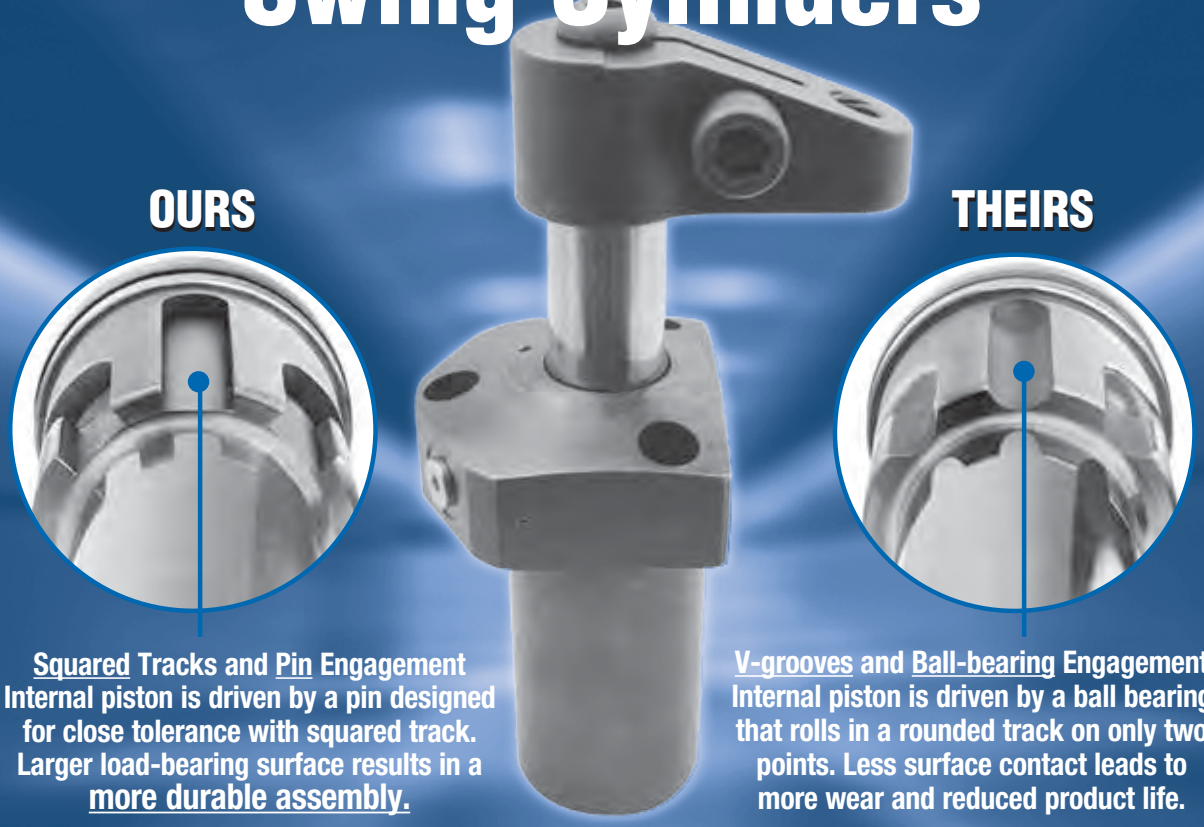
THE Jergens DIFFERENCE

Swing Cylinders



Squared Tracks and Pin Engagement
Internal piston is driven by a pin designed for close tolerance with squared track. Larger load-bearing surface results in a more durable assembly.

V-grooves and Ball-bearing Engagement
Internal piston is driven by a ball bearing that rolls in a rounded track on only two points. Less surface contact leads to more wear and reduced product life.

JERGENS CLAMPING SWING CYLINDERS	VS.	OTHER CLAMPING SWING CYLINDERS
Precision machined for close tolerance between piston groove and pin. Better fit results in smoother motion and a more durable swing cylinder assembly.		Less surface area between bearing and track combined with severe conditions within the clamp body result in deforming of the bearing and assembly breakdown.
Free-floating pin design matches the shape of the groove. More contact area and less wear "keeps the pin in the pocket."		Ball bearings can "pop out" of the track—a common failure of traditional swing clamps—causing the piston to seize.
Heavy-duty, low-friction rod seal features "double-lip" sealing—virtually leak-free even under severe operating conditions. Plus, lubricant is retained in the cavity formed by secondary lip—increases performance and quiets operation.		Seals may be more prone to wear and "dry run." Failure of traditional seals is the primary failure of swing cylinder clamps.
High-pressure, low-friction, bi-directional piston seal is easier to turn and reduces leaks.		Breakdown of traditional seals is the primary failure of swing cylinder clamps. Galled seals cause contaminants, accelerating breakdown and increasing downtime.

Jergens®
MANUFACTURING EFFICIENCY

Kwik-Strip® Stripper Bolts

A New Perspective on Stripper Plates

Today's more complex dies require more time to service. The advantage of time saving devices such as ball and roll lock punches is minimized unless the stripper plate can be removed first.

The patented Jergens Kwik-Strip Stripper Bolts provide an inexpensive, simple method of stripper plate removal. The stripper can be removed with the die still mounted in the press!

Installation

Step 1: Drill a through hole 1/32" larger than the nominal body diameter of the bolt to be used.

Step 2: Using a Jergens Drill Jig, drill the auxiliary 1/4" hole. The 1/4" hole may be located radially at any position on the periphery of the body hole. Drill the 1/4" hole slightly deeper than the proposed counterbore.

Step 3: Using a standard counterboring tool, counterbore to required depth. See counterbore selection chart for proper size.

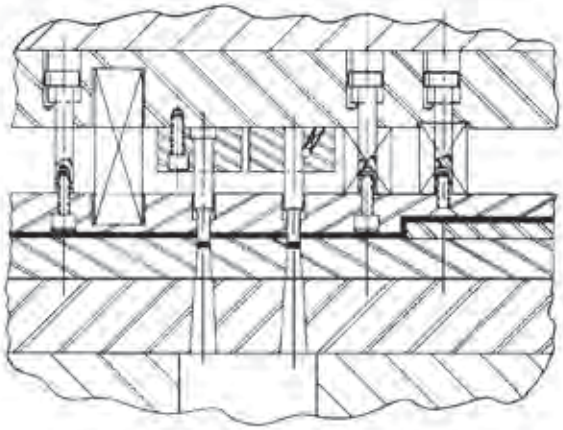
Step 4: Drill and counterbore the stripper plate for a socket head cap screw.

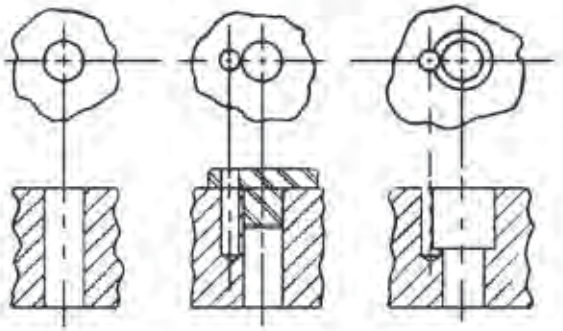
Installation in Existing Dies

To convert an existing die for use with Jergens Kwik-Strip Stripper Bolts, simply mill a 1/4" slot down the side of the stripper counterbore, then drill and counterbore the stripper plate. If the same size thread must be maintained, the through hole and counterbore in the punch holder will have to be increased.

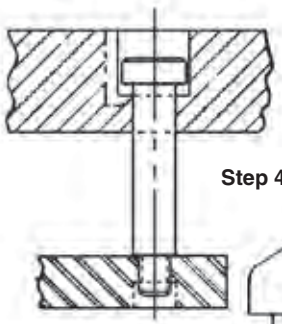
Disassembly in the Press

Block the stripper plate in position, remove the cap screws using a hex wrench, then carefully remove stripper plate. Replace stripper plate after completion of required service.

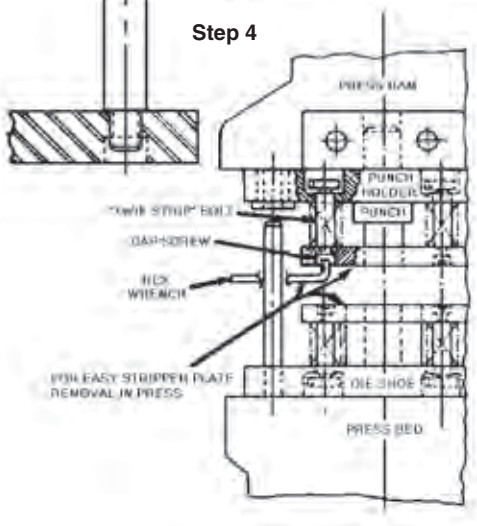




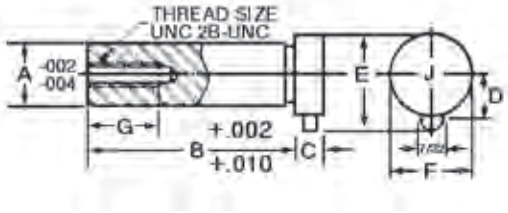
Step 1 Step 2 Step 3



Step 4



Kwik-Strip® Stripper Bolts



- Material: Alloy Steel
- Heat Treat: Rc 32-36
- Available in Fixture Pro® Design Software

Selection of Sizes

Size selections should be based upon thread size. For example, if your application calls for a 1/2" stripper bolt (with a 3/8" thread) use a 5/8" Kwik-Strip bolt (with a 3/8" thread). Kwik-Strip bolts may be shortened by 1/4" and still have sufficient thread depth for the cap screw.

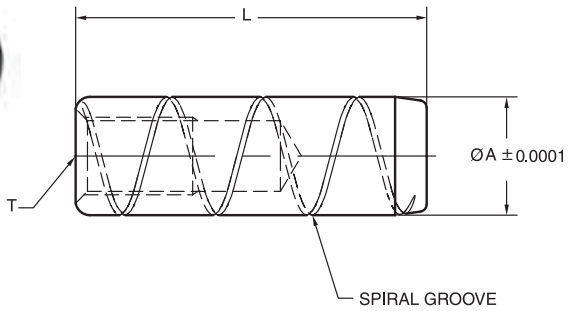
Jergens WORKHOLDING SOLUTIONS GROUP

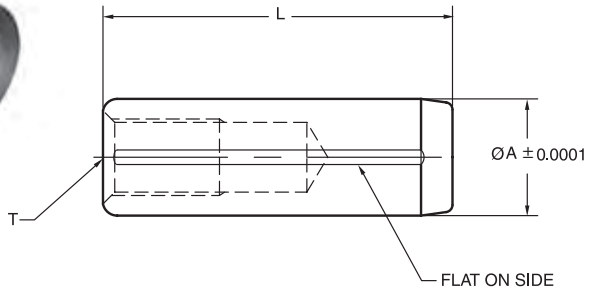
Alloy Steel Pull Dowel Pins

Jergens Offers 3 Styles of Precision Ground Pull Dowels

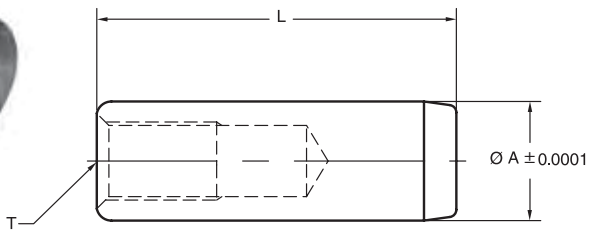
Spiral Groove
(Grooves Help to Relieve Trapped Air)



Flat Vent
(Ground Flat Helps to Relieve Trapped Air)



Standard Round
(Non-Vented)



Features, Applications & Benefits

- Internally threaded hole allows removal of pull dowels with a standard screw.
- Standard Round Pull Dowels are typically used in applications featuring a through hole.
- Spiral Groove Pull Dowels feature a groove cut to allow trapped air to be released.
- Flat Vent Pull Dowels feature a ground flat on one side to release trapped air.
- Spiral Groove and Flat Vent Pull Dowels are typically used in blind hole applications.
- All of Jergens Precision Ground Pull Dowels are constructed of heat treated alloy steel.

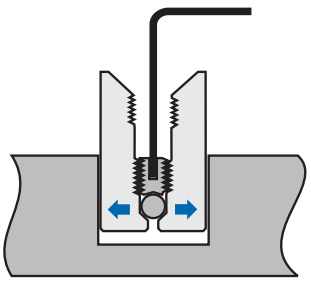
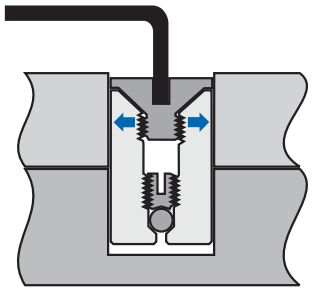
Installation Instructions



Step 1

Remove the top screw, insert the dowel into the locating hole of the first part, and expand the bottom half with a hex wrench.



Step 2

Replace the top screw, slide the locating hole of the second part over the dowel and expand top half with a hex wrench.

Slotted Locator Bushing

- Use with L Pins to align two holes without binding.
- Available for 3/16" through 1" diameter pins (6mm-25mm in metric sizes).
- Tool Steel, heat treated to Rc 58-62
- Supplied with Roll Pin: Locate within ±.002" of slot centerline.

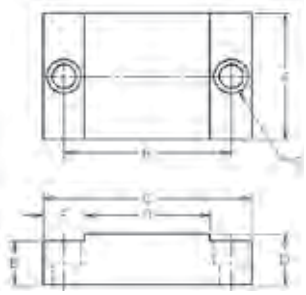
Rest Pad



Jergens Feature:

By holding close tolerances on the "D" dimension, when replacement becomes necessary, your original tolerances are maintained within .0005 (.013)

- Material: Low Carbon Steel
- Finish: Black Oxide
- Heat Treat: Case Hardened 75-77 R30N
- Available in Fixture Pro® Design Software

Rest Pads are designed to be used when you need a larger hardened wearing surface for heavy duty applications. Rest Pads can also be used as hardened work rests or as wear plates on your jigs and fixtures.

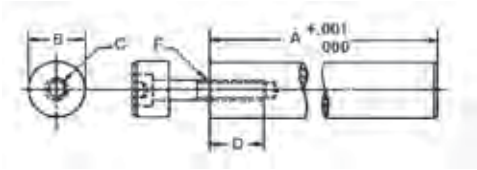
Jig Legs



The Jergens Jig Legs are ideal for cutting costs in simple jig plates. They assure lasting accuracy in your jig plate with a larger bearing surface at the top the the leg. The large diameter rest button provides more bearing surface for spot facing or counterboring on the bottom side. Both legs and rest buttons are hardened for long life.

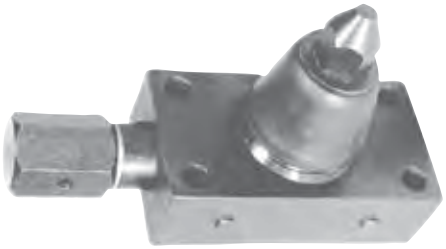
Work Support Jacks



The Jergens Spring Loaded Work Jacks provide consistent support and rigidity to odd shaped workpieces. They are designed to prevent workpiece deflection under forces created during machining operations. Precision mated locking jaws grip the jackpost from both sides creating a vise-like action.

- Load capacities 300-4500 lbs.
- Rugged design
- Quality construction
- Dual jaw locking action
- Rubber boot or dust cap models available

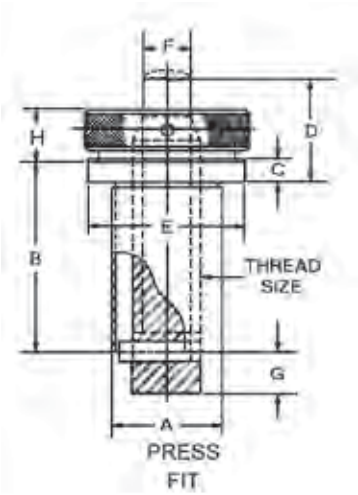
Fixture Jacks



Designed as a positive locking jack for irregular clamping to achieve various heights requiring a positive pressure stop. Adjustable to fit height irregularities of milling operations. Available in either a smooth radius head or a hardened tool steel serrated gripping surface. Elevates vertically, no rotation. Outer diameter of bushing ground for press-fit.

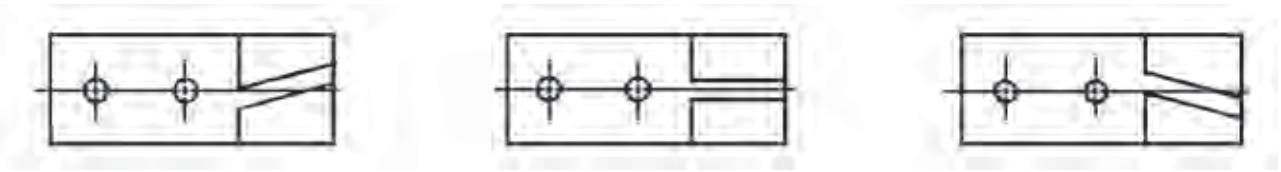
Compare The Jergens Sine Fixture Key Method To The Standard Method

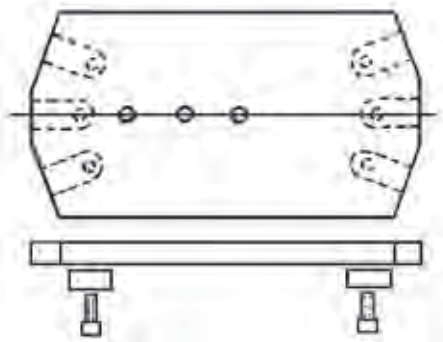
Construct a fixture to mill slots in castings A, B, and C. The locator pins to be common.



A B C

Present Method

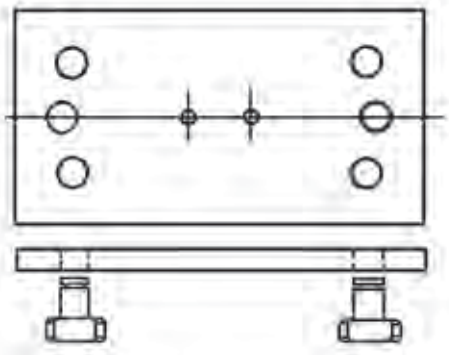
A total of 11.2 hours was required to complete this fixture base with finished edge, milled fixture key slots, bored locator pin holes and drilled and tapped set screw holes.



PRESENT METHOD	TIME
1. Finish one edge.	.5 hours
2. Locate on jig bore and bore locating point and two locator pin holes	1.75 hours
3. Relocate, position and mill two fixture key slots.	1.75 hours
4. Relocate and, by use of sine bar or other positioning device, establish and mill two fixture key slots.	2.35 hours
5. For opposite slots-same as above	2.35 hours
6. Drill and tap six holes for holding fixture keys in slots.	1.5 hours
7. Set up and perform inspection-if inaccurate, reroute for reworking.	1.0 hours
TOTAL TIME REQUIRED	11.2 hours

Jergens Method

It took only 5 1/2 hours to complete this fixture with bored sine fixture key holes and bored locator pin holes

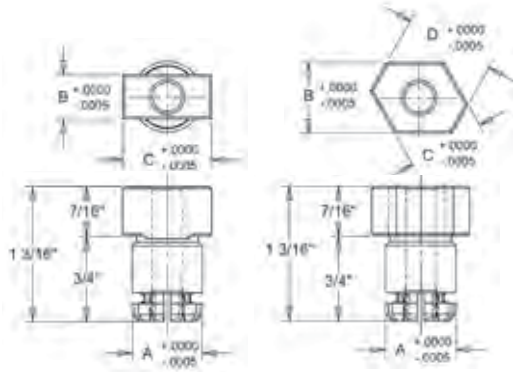


JERGENS METHOD	TIME
1. Eliminated.	
2. One set-up serves for establishing locator holes and sine fixture keys.	4.5 hours
3. Eliminated.	
4. Eliminated	
5. Eliminated.	
6. Eliminated.	
7. Inspect on original set-up.	1.0 hours
TOTAL TIME REQUIRED	5.5 hours

ON THIS PARTICULAR FIXTURE - SAVE OVER 50% OF SET-UP TIME!

Multi-Slot Sine Fixture Keys Inch

- One key fits multiple table slots
- Material: AISI 4140 Alloy Steel
- Heat Treat: Through Hardened to Rc 26-30
- Reduce fixture costs
- Cut set-up time
- Interchangeable with other Sine Fixture Keys
- Replacement screw for all sine fixture keys is PN 710190



Jergens Feature:

Full 360° contact for more accurate locating.

One key fits multiple table slots! Sine Fixture Keys locate jig and fixtures on machine tool tables and position the part to be machined in one operation.They eliminate the need to slot fixture bases, make step fixture keys, or drill and tap keys. All you need to do is ream two 5/8" or 3/4" holes, depending upon the table size. The wide range of Sine Fixture Key sizes adapts to the various table slot widths. Sine Fixture Keys with a metric slot size and inch shank size are now available. The tapered expansion screw allows the key to be locked in the fixture from either the top or the bottom by using a standard 3/32 or 4mm hex wrench.

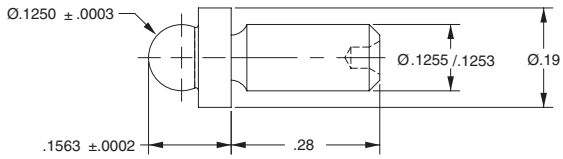
Carbide

Part Number
29099



- Two-piece construction
- Used as reference points for inspection applications in conjunction with Coordinate Measuring Machines to accurately measure the workpiece.
- Concentricity of Ball to Shank - 0.0002 T.I.R.
- Hardened and ground
- Material: Ball - Carbide
  Shank - 440 Stainless
- Weight per 10 pcs. 0.1 lbs.

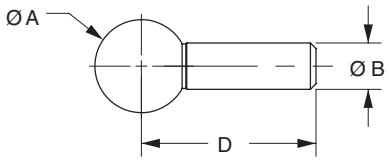
Tooling Balls

Fixture Balls (plain shank)

These Tooling balls are assembled by a welding technique that retains the initial high precision and fine finish of the balls.

- Material: Type 440-C Stainless Steel hardened
- Eccentricity, ball to shank, 0.0002 T.I.R. maximum
- Two Piece Welded Construction

NOTE: The weld between the ball and the shank is made so that the ball will drop off if subjected to unusually heavy lateral forces. This prevents setup and inspection errors that might occur because of accidental bending of the shank.



Part Number	A ±0.0001	B +0.0000 -0.0003	C ±0.005

*Metric available if requested

Checking Balls (with reference shoulders)

High precision stainless steel checking balls are made to closer tolerances and avoid excessive side forces. The accurately located shoulder provides for positive positioning, re-positioning, or replacement.

- Material: Type 440-C Stainless Steel hardened
- Eccentricity, ball to shank, 0.0002 T.I.R. maximum
- Two Piece Welded Construction

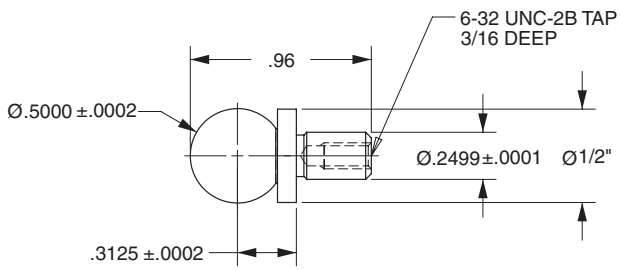
**Metric available if requested

Checking Balls (with reference shoulder and tapped shank)

This Checking Ball can be pulled into a hole or bushing from below without applying pressure on the ball (accomplished by using a cap screw in the tapped hole in the shank).

- Material: Type 440-C Stainless Steel hardened
- Eccentricity, ball to shank, 0.0002 TIR max.
- Two Piece Welded Construction



Part Number
29021

Jergens
WORKHOLDING SOLUTIONS GROUP

Jergens Workolding Solutions Group... Your Uptime Consultants

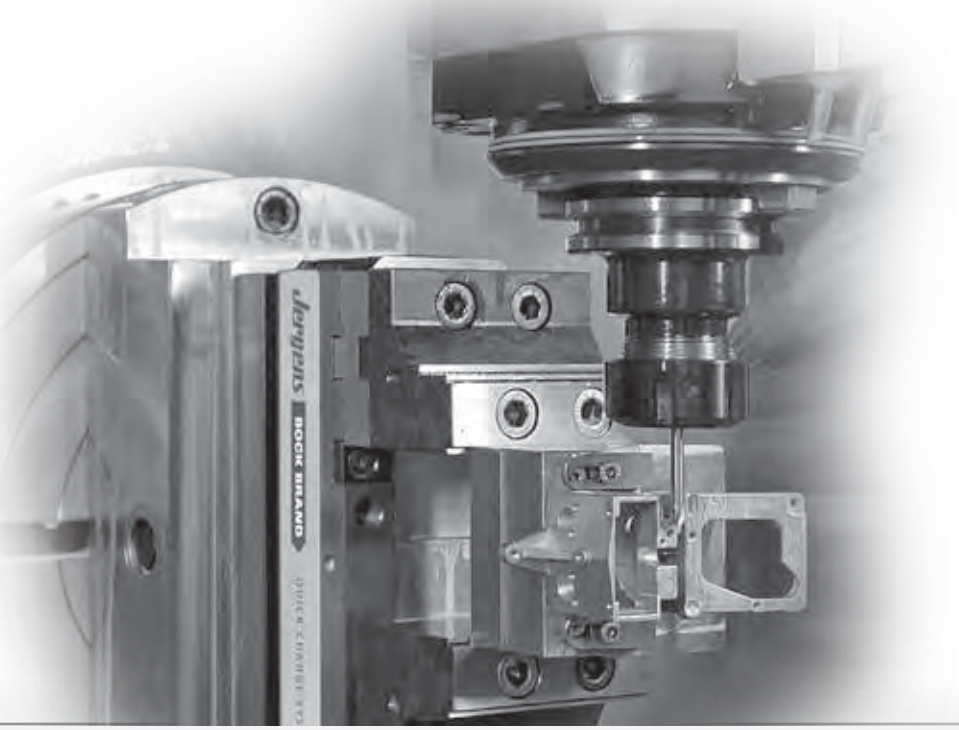
To compete in today's global industry you need to accommodate shorter lead times, smaller batch sizes and frequent set up changes.

Get more savings by changing what's UNDER the spindle, not ON it.

Shave 90% from your set up times by implementing a quick change fixturing system for a fraction of the cost of your cutting tool investment. Jergens' workholding efficiency improvement process helps:

- **Increase spindle uptime**
- **Speed implementation of lean manufacturing**
- **Improve productivity**
- **Optimize workholding**
- **Reduce downtime**
- **Maximize cost savings**
- **Eliminate setup errors and inefficiencies**
- **Faster part-to-part changeover**

Jergens®
SAVINGS
UNDER THE SPINDLE



"The applications of the Ball Lock® System are basically limitless – you're completely free from the design limitations of common tooling. We have increased utilization rates 75% – 90%."

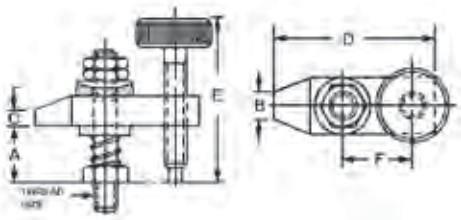
MANUFACTURING EFFICIENCY

Clamp Assemblies

Miniature Flat

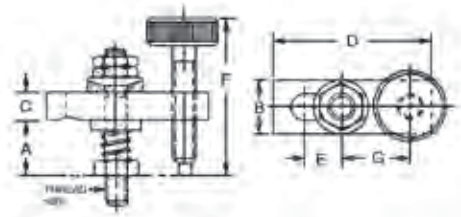
Fast-acting clamp for light-duty holding. Includes strap, knurled thumb screw, spherical washer, stud, plain flat washer, three hex jam nuts and spring. Features free swinging adjustments for positioning the assembly without interference.



Part Number	A	B	C	D	E	F	Thread Size	Wt. (lbs)
12901	5/8	1/4	1/8	1 1/2	1 9/16	11/16	10-24	.19
12902	5/8	1/4	1/8	2	1 9/16	15/16	1/4-20	.22
12903	9/16	1/4	1/8	2 1/2	1 9/16	1 3/16	1/4-20	.25

Miniature Radius

A light-duty clamp assembly for clamping close to the edge. Complete with radius strap, double jam nuts with spherical washers, finger tip, quick-action knurled thumb screw heel rest, stud, spring and washer. The latter allows free swinging and lateral adjustments for easier set-ups.



Part Number	A	B	C	D	E	F	G	Thread Size	Wt. (lbs)

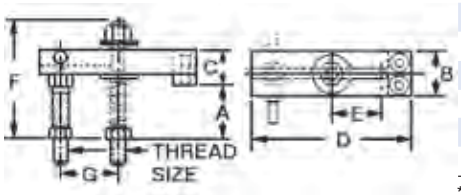
Clamp Assemblies

Flange Nut



Use where great clamping pressures are needed and vibration is a problem.

Heavy-duty clamping with spherical flange nut and spherical washer for greater flexibility. Extra long, true milled slot allows more clearance for placing and removing work. Brass and plastic pads are available, see page 245.

Part Number	A	B	C	D	E	F	G*	Thread Size	Wt. (lbs)

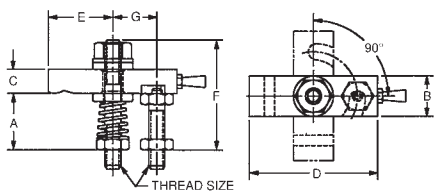
Radius Swing Clamp



Features fast-action, light-duty holding of plain surface work where quick movements are required in a restricted space. Radial milled slots allows for 90° swing. Ideally suited for placing and removing workpiece.

Part Number	Thread Size	A	B	C	D	E	F	G	Wt. (lbs)

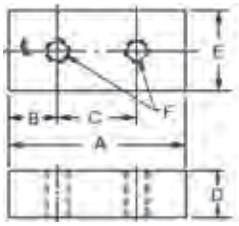
Designed for applications where thumb screws are too light, and a heavier, larger unit is needed. Cast iron knob, dog point end.

Strap Pads-Steel, Plastic & Brass



- Material: Steel, Low Carbon Steel
  Plastic, Paper Filled Bakelite
  Brass
- Finish: Steel Pad Only, Black Oxide
- Heat Treat: Steel Pad Only,
  Case Hardened 74-77 R30N

Plastic Pads
Resistant to oil and cutting fluids, allows high clamping pressures, yet protects the soft materials from being scratched or marred.

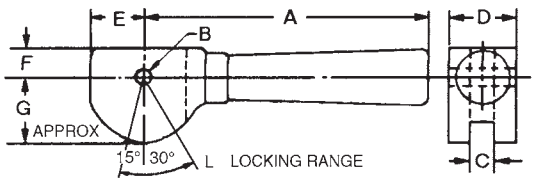
Double Cams

Slip standard pipe over handle for more leverage. Snug fit at handle collar and end.

- Finish: Black Oxide
- Material: C1020
- Heat Treat: Case Hardened 74-77 R30N



Forged, heat-treated for abrasion-resistance and longer life. Designed for quick change clamping which requires greater holding pressures than are available with single cams. Mean clamping point pressure angle is from 3 1/2˚ to 4˚, which makes for stronger workholding.

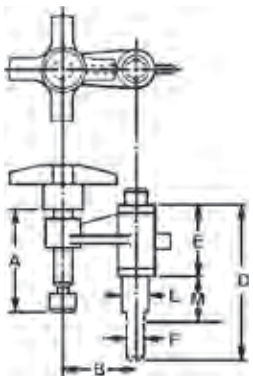
Revolving Clamp Assemblies

Quick hold-down of workpiece with hand tightening, then loosen and revolve out of the way. Saves time for moderate-duty clamping.

Malleable cast iron body. Case-hardened swivel pad uses "tru-center" feature to maintain even, in-line pressure on workpiece.

Long Bushing Type



- Body Material: Malleable ASTM A47, GR32510
- Finish: Black Oxide

Rod Ends
Threaded

- Material: Alloy Steel
- Finish: Black Oxide
- Heat Treat: 32-36 Rc
- Thread: Class 2A-UNC

* 150,000 PSI Tensile

Rod Ends are forged and finished for applications not requiring flat contact with the head. All holes are reamed. Rod Ends can be used with spherical flange assemblies, flange nuts and clamp assemblies.

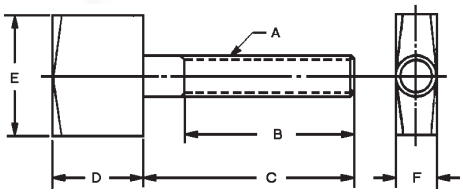
Quarter Turn Screws



The diamond on all four corners of the Jergens Quarter Turn and Half Turn Screws, makes the opening and closing of jig lids easier. Ideally suited for clamping lids, covers and swing-away type bushing arms. Quarter Turn and Half Turn Screws may be machined for finishing requirements.

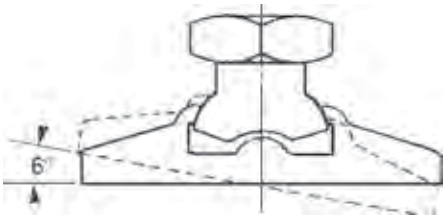
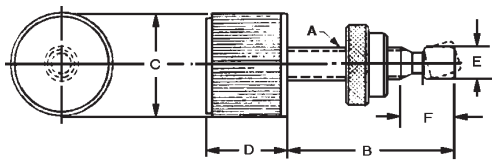
Tru-Center™ Toggle Products



The Jergens patented "Tru-Center" products are the only pad type on the market to provide true center line clamping. The cut-away drawing illustrates how this works. The center line of the pad and the center line of the nut always intersect at the point of contact between the pad and the workpiece.

Adjustable Torque Toggle Screws

- Material: Stem, Stressproof®
  Pad, 4140
- Finish: Stem, Black Oxide
  Head, Chrome Plate
- Thread: 2A-UNC
- Pad: Angular movement either side of center (total 16°)



Perfect for delicate and fine clamping. Once the end holding force is reached, the head breaks free. Larger radius, straight knurled head for easy turning.

Hand Knob Toggle Screws

- Material: Stem, Stressproof®
  Pad, 4140
  Head, Cast Iron
- Finish: Stem, Black Oxide
  Pad, Zinc Plate
  Head, Cadnium Plate
- Thread: 2A-UNC
- Pad: Angular movement either side of center (total 16°)

For clamping of irregular surfaces while the swivel shoe prevents marring of polished surfaces. Shoe is hardened for longer life. The cast iron hand knob is included for hand tightening. To remove pad for installation, pull and turn counter-clockwise.

Plastic Pad Covers

- Material: Nylon

Where soft material with fine finished surfaces must be clamped with relatively high pressures, we recommend the use of the Jergens Plastic Pad Covers. Resistant to oils and cutting compounds, they snap over the swivel end of our Hand KnobToggle Screws, Socket Toggle Screws, Toggle Thumb Screws, Toggle Pads and adjustable Torque Thumb Screws.

Plastic Pad Covers snap over outside diameter of Jergens swivel pads.

Tru-Center™ Toggle Products

Toggle Pads

Carbide Tipped Toggle Pads provide multiple point contact to compensate for surfaces that are rough or out-of-round. Points will embed themselves in the workpiece, which assures positive gripping. It eliminates possible radial load on the workpiece.

32571	M10 x 1.5	16	21	32	1000	.07
32572	M12 x 1.75	22	27	48	1900	.17
32573	M16 x 2.0	26	31	57	2900	.26
32574	M20 x 2.5	30	39	76	4500	.55

Note: Metric Toggle Pads have two flats instead of a hex configuration on the head.

Leveling Mounts

- Material: 1214 Steel
- Zinc-plated, yellow finish
- Non-Skid Material: Neoprene
- Case hardened, file hard
- Swivels 20°, ±10° from center in all directions
- Available with non-skid on base
- Available in stainless steel, or with a delrin pad, and in larger sizes upon request.

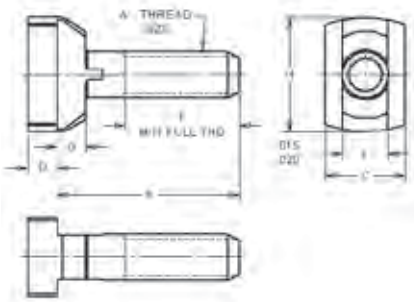
T-Slot Bolts



Jergens Feature:

Protect your expensive machine table slots with Jergens T-Slot Bolts. The completely finished machined head provides at least 50% more bearing surface under your table slot. T-Slot Bolts outlast T-Bolts in wearability in most applications.

- Material: Alloy Steel
- Finish: Black Oxide
- Heat Treat: Rc 34-38
- Thread: 2A-UNC
- Available in lengths up to 24"

Flange Nuts

Where heavy clamping pressures and vibrations could cause trouble, the wide face surface of the flange nut holds through with greater friction.

- Material: Low Carbon Steel
- Finish: Black Oxide
- Heat Treat: Case Hardened
- Thread: 2B-UNC

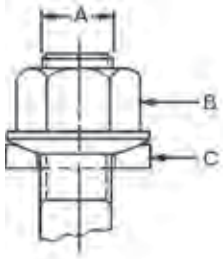
Spherical Flange Assemblies

Same advantages as Spherical Washers but with the addition of a nut to replace the top section of the washers. Convex bottom of nut nests into the concave bottom section for full floating action.



- Material: Low Carbon Steel
- Finish: Black Oxide
- Heat Treat: Case Hardened

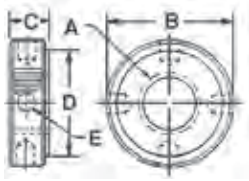
Knurled Lock Nuts



Most convenient for quick thread locking on your jig and fixture work. Straight knurled radius provides sure, non-slip finger grip in oily conditions. Faces are square with threads which assures a large locking surface.

- Material: Low Carbon Steel
- Finish: Black Oxide
- Heat Treat: Case Hardened
- Thread: 2B-UNC

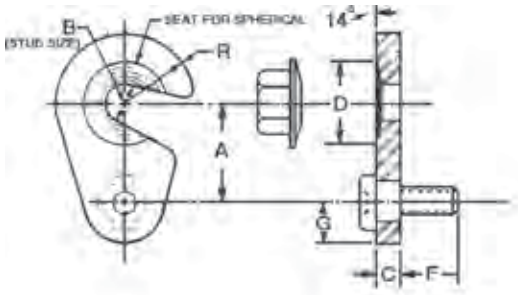
Washers

Swing "C" Washer Assembly



The Swing "C" Washer has a concave center for self-locating around the stud, which prevents creeping while tightening, and allows acceptance of the mating spherical flange nuts. The Spherical Flange Nut assures that the washer cannot back out either during clamping or due to vibration during the operation. The shoulder screw has a nylon lock to prevent loosening of the screw during operation.

- Material: Low Carbon Steel
- Finish: Black Oxide
- Heat Treat: Case Hardened

Washers
Self Aligning Washers (Two-Piece)

Upper

Lower

These washers are ideally suited for joining machine sections which are out of parallel. They adjust themselves for a positive, firm base. With radius "E" and the angular 14° combination, line contact is formed around the two mating washer surfaces, allowing the two washers the ability to seek misalignment in the companion clamping members. The heat treated I.D. of the bottom concave piece is larger than the I.D. of the top convex section for free action. It is precision ground and the sharp edges are removed.

USAE™ Heavy Duty Flat Washers

USS + SAE = USAE

What is a USAE™ Washer?

- It is a simple but effective idea that is long overdue.
- The Outside Diameter conforms to USS standards. This provides a washer that is up to 36% larger than standard hardened washers.

More Contact Area = More Holding Power

- The Inside Diameter conforms to SAE standards. The small ID provides a more precise fit on bolts, studs, etc.
- USAE Washers are also up to 37% thicker than standard hardened washers for greater strength.
- Washers are made from mild steel. They are case hardened to 60 HRc and have a black oxide finish.
- Bolt size is stamped on each washer for easy identification.

Replaceable Grippers
Tapered – Hardened Steel

Pointed

Fine Serrated

Jergens introduces a new concept in replaceable grippers. It is now easier to modify soft top jaws, strap clamps, or fixtures to hold irregularly shaped material. The grippers can be installed from one side, using a combination center drill, a tap, and a box wrench. There is no need to drill through holes from difficult to reach locations. Simply drill, tap, and install.

- Material: 8620
- Finish: Black Oxide
- Heat Treat: Case Hardened
- Available in FixturePro™ Design Software

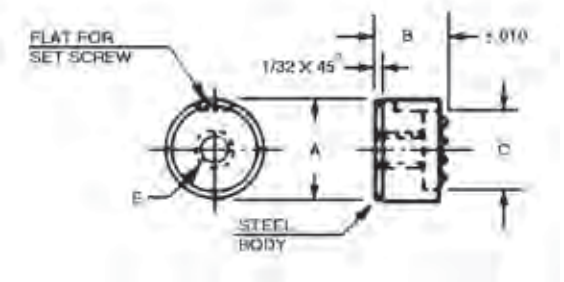
23823	3/4	.187	.70	.38	3/8-16	No. 8	.745

Replaceable Grippers

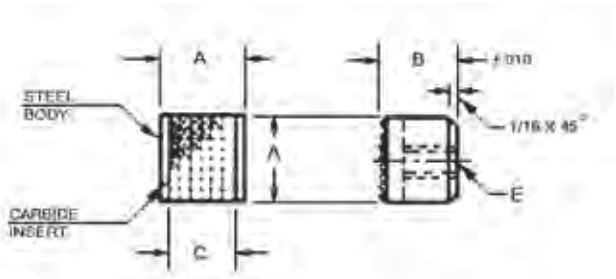
The Jergens Replaceable Grippers are available in Hardened High Speed Tool Steel or with Carbide Inserts. The points of the grippers embed themselves into the work piece giving greater holding power with less actual pressure. Jergens Grippers may be held in place using either a set screw on the flat of the gripper or the threaded hole in the back of the gripper.

Use Jergens Grippers to make hardened serrated jaws from Jergens soft top jaws or add the grippers to Jergens strap clamps for extra holding power. Use Jergens replaceable grippers anywhere that rough surfaces are being held in position for machining.

ROUND GRIPPERS



SQUARE GRIPPERS



- Material: Body, Low Carbon Steel
  Insert, Carbide
- Finish: Zinc Plate
- Serrations: .09" x 90°
- Available in FixturePro™ Design Software

Forged Adjustable Clamps

Forged Adjustable Clamps automatically compensate for clamping height changes within their clamping ranges (see chart for ranges). The swivel bushing is permanently mounted in the clamp which alleviates lost or missing parts. The standard brass heel plate protects the machine table.

Forged Adjustable Clamp holding one side of a hydraulic vise on a milling machine table.

- Material: 1137 Forged Steel, Heat Treated
- Finish: Black Oxide
- One Piece Construction
- Versatile Clamping Height
- Made in U.S.A.

Features high quality forging providing superior clamping strength.

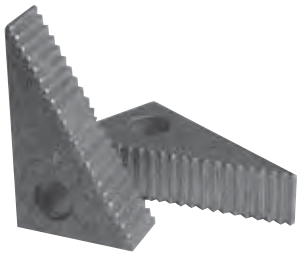
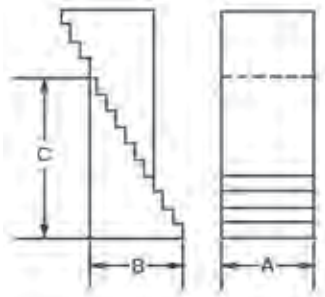
Adjustable Step Blocks
Aluminum — Coarse Pitch





1" & 2" Wide Adjustable Step Block Kits

Step blocks are made of aluminum to prevent damage to machine table surfaces.

Tooth design has no sharp edges which helps to prevent burrs and chip build-up in the steps. Blocks are completely interchangeable with each other, and with the Jergens Coarse Pitch Step Straps.

Standard (1" Width) Kit
21701

Included in Kit:

Qty Per Kit	Part Number (Blocks Only)	A	B	C	Step Elevation	Wt. (lbs)
8	**21705**	1	5/8	1 1/16	11/64	.03

Step Blocks sold individually.

60-Piece Set-Up Kits
Aluminum Step Blocks

Kit with Metal Holder

Each 60-Piece Set-Up Kit is supplied with either a non-marring wooden base or a heavy duty steel holder. Tooth design has no sharp edges, which helps to prevent burrs and chips from building up on the steps. The aluminum blocks will not mar precision machine tables.

Each Set-Up-Kit Includes:
- Six Table Saver T-Nuts
- Six Flange Nuts
- Six Step Heel Straps
- Four Coupling Nuts
- Twenty-four Studs: Four each of 3", 4", 5", 6" 7", 8" lengths
- Twelve Course Pitch Aluminum Step Blocks
- One Metal Holder

Part Number Metal Holder	Stud T-Slot Width	Thread Size	Strap Lengths	Wt (lbs)

45107	13/16	5/8-11	3, 5, 7	30

Metal kit holders are also sold seperately.
Same holder used for both kits.

1/2" Metal Holder	5/8" Metal Holder
45116	45117

60-Piece Set-Up Kits
Steel Step Blocks

Each 60-Piece Set-Up Kit is supplied with heavy duty steel holder. The fine pitch steel blocks are compatible with other standard step blocks and straps.

NOTE: The fine pitch blocks are not compatible with the Jergens course pitch aluminum blocks.

Each Set-Up Kit Includes:
- Six Table Saver T-Nuts
- Six Flange Nuts
- Six Step Heel Straps
- Four Coupling Nuts
- Twenty-four Studs: Four each 3", 4", 5", 6", 7", 8" lengths
- Twelve Fine Pitch Steel Step Blocks
- One Metal Holder

40-Piece Clamping Kit

Contains the same quality components as the larger kits but without the step blocks and step heel straps. This Clamping Kit includes taper nose straps, T-nuts, coupling nuts, flange nuts, clamping heels and studs.

Each Clamping Kit Includes:

- Four Table Saver T-Nuts
- Twenty Studs:
  Four Each 4", 5", 6", 7", 8" lengths
- Four Adjustable Clamp Heels
- Four Flange Nuts
- Four Coupling Nuts
- Four Taper Nose Straps
- One Wooden Holder (†)

† Includes Wood Holder.

Die Set-Up Kits

These Die Set-Up Kits can be used with any of the Jergens heavy duty straps; however, the kits are best suited **for use with forged strap clamps** found on pages 286 thru 288.

Each Kit includes:

- Four Flange Nuts
- Four Heavy Duty Washers
- Twelve Steel Step Blocks
- Twenty Studs
- One Wooden Holder

Thread Size	Part Number	Stud Lengths
1/2-13	**44921**	3, 4, 5, 6, 8
5/8-11	**44922**	3, 4, 5, 6, 8
3/4-10	**44923**	4, 5, 6, 8, 10

Toe Clamps
Small

Jergens Feature:
3° Taper Prevents Back-off

Toe Clamps are powerful, low profile clamps that grip on the side of the workpiece leaving the top surface open. This minimizes interference with cutting tools or measuring instruments. Ideal for use on mills, planers, jig borers, drill presses, and faceplates.

- Steel or brass toe and special washer are included with each clamp
- Slotted for 5/16 or M8 Cap Screws
- Case hardened for maximun wear
- Black Oxide finish

Small Toe Clamp Kits

Each Clamp Kit Includes:
- Six Toe Clamps:Two of each length (1 1/2", 2", 2 1/2")
- Six Low Grip Steel Toes
- Six Toe Clamp Nuts
- Six Protective Washers
- One T-Wrench
- One Wooden Holder

Part Number	Table Slot	Toe Clamps	Toe Clamp Nuts	Washers	lbs Per Kit

Serrated Jaw Clamp

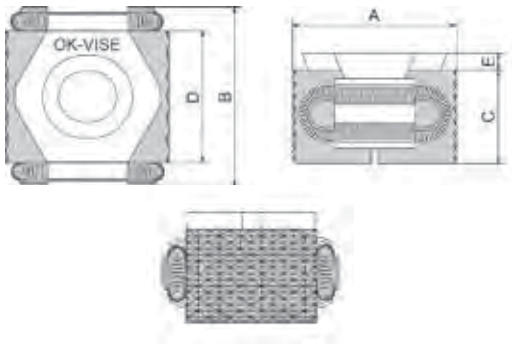
DK2-VT/
DK2-VTI

FK2-VT

BK2-VT

General-purpose clamps for your shop. Serration creates high friction, which ensures reliable clamping in any circumstances.

Serrated Jaws



Part Number	A			B	C	D	E	Socket Head Screw DIN 912	Clamping Force of Jaws kN (lbs)	Tightening Torque Nm (ft/lbs)	Weight in g (lbs) approx.	Hardness of Jaws HRC

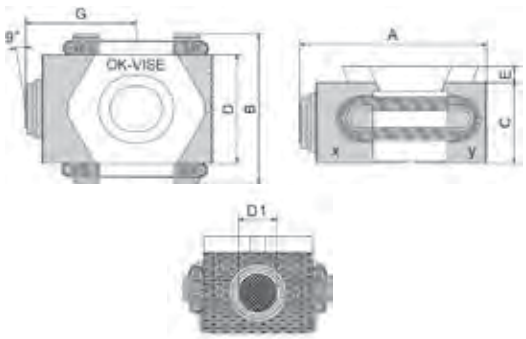
Self-Adjustable Jaw Clamp

DK2-VT-B/
DK2-VTI-B

BK2-VT-B

These clamps have a self-adjustable ball gripper screw inserted into a clamp jaw. The ball bearing at the end is made of steel and equipped with torsion protection, allowing the ball to self-adjust up to 9 degrees. This makes clamping irregular-shaped parts and castings more flexible



Part Number	A			G			B	C	D	E	Dia. of Serration (D1)	Socket Head Screw DIN 912	Clamping Force of Jaws kN (lbs)	Tightening Torque Nm (ft/lbs)	Weight in g (lbs) approx.	Hardness of Jaws HRC X	Hardness of Jaws HRC Y

Economy Clamp

The cost efficient choice!

These models meet the demands of workholding when ultra precision and high clamping force are not necessary. They are made of the same raw material as our other models, and the bottom of the jaws are ground for precise positioning on the fixture base. AK2-VT-SO always comes with Viton o-rings.

Only the bottom of the jaw is ground. Only our two smallest series clamps are available in the economy model (AK2-VT-SO).

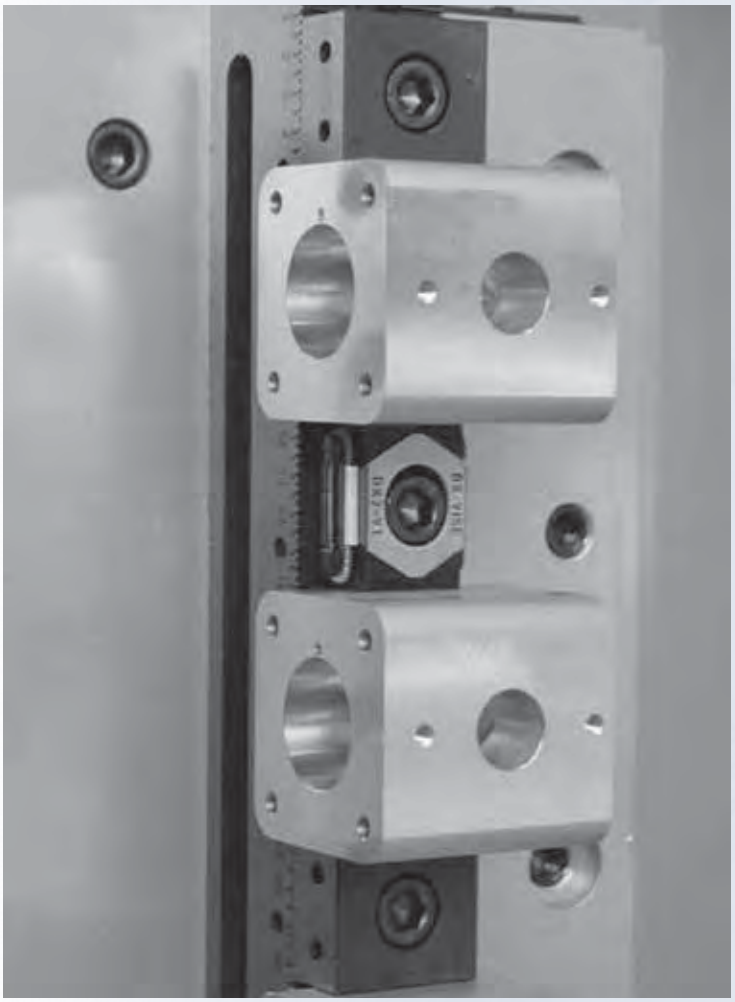
WORKHOLDING SOLUTIONS GROUP

MULTI-RAIL RM SYSTEM

Jergens® / OK-VISE®
WORKHOLDING CLAMPS AND ACCESSORIES

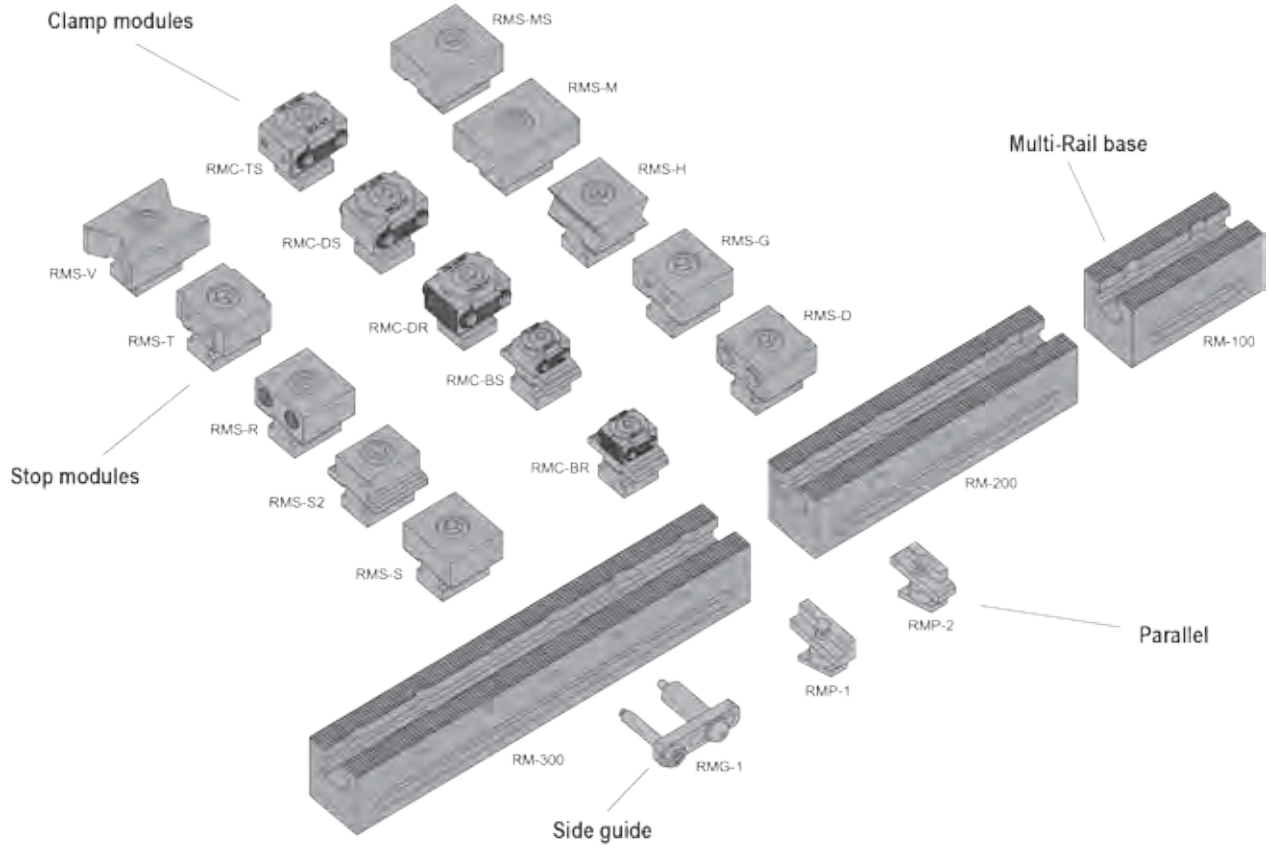


Multi-Rail RM System

Multi-Rail is the new generic-purpose workholding system of Jergens/OK-VISE. Compared to a traditional machine vise, the Multi-Rail system offers the following benefits:

- Using the components of the system, even the most challenging workpiece types can be machined
- All sides of a workpiece can be machined with two setups
- Multiple workpieces can be clamped on the same area
- Workpiece will be safely fixtured
- It is also possible to clamp very large work pieces

Multi-Rail RM System Components



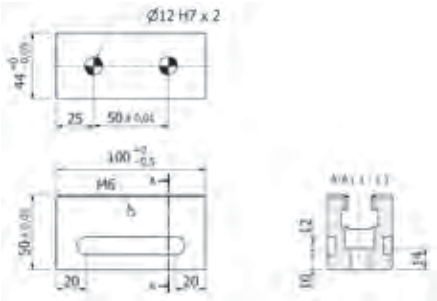
Base Rail RM Series

The OK-VISE Multi-Rail base is the strongest on the market due to its steep serration profile. It has been designed for D- and B-series clamp modules and can withstand up to 4 tons clamping force. The pitch of the serration is 2,5 mm, and the size of the RM profile is 44 x 50 mm. The accuracy from every serration to the positioning hole is ± 0.01 mm.

RM-100

This is the shortest rail, with two 12 mm H7 positioning holes.

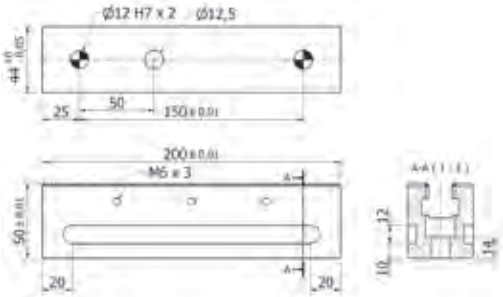
Part Number	Size
RM-100	100MM



RM-200

A rail 200 mm in length provides better adjustability than the shortest RM-100 rail.

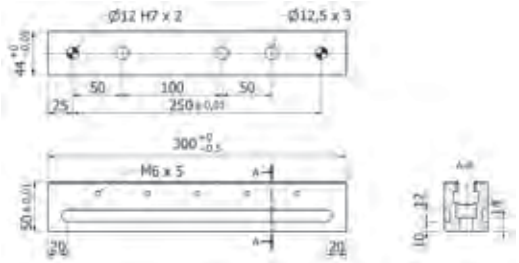
Part Number	Size
RM-200	200MM



RM-300

This length rail is most commonly used to replace old-fashioned machine vises.

Part Number	Size
RM-300	300MM



RM-400

On Multi-Rail base rails L=400...700 mm, positioning hole is the second one from the end of each rail. Please note that the end of the rail is different from the start. The numbering of the scale starts from the left.

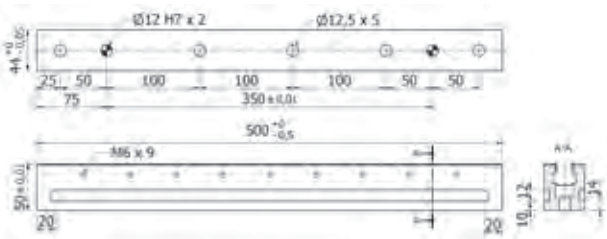
Part Number	Size
RM-400	400MM

Base Rail RM Series

RM-500

A good universal rail for VMC and HMC machining.

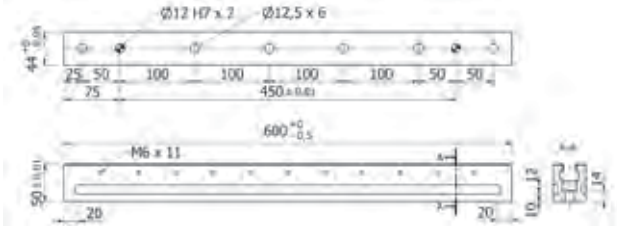
Part Number	Size
RM-500	500MM



RM-600

This rail length is very popular on tooling blocks.

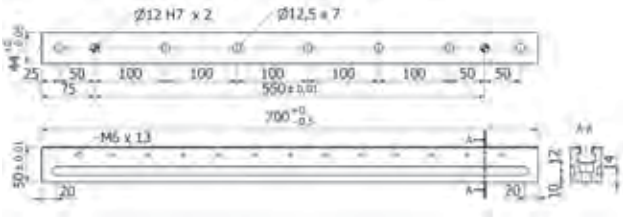
Part Number	Size
RM-600	600MM



RM-700

This is the longest standard rail produced by OK-VISE. Special length rails (also longer than RM-700) are also available.

Part Number	Size
RM-700	700MM



Multi-Rail RM Stop Modules (RMS-)

The same jaw types used in clamps are available in the stop modules:

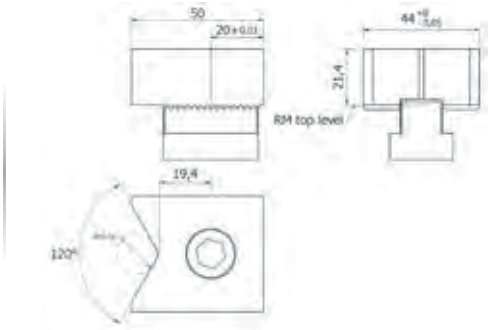
- Serrated (R)
- Smooth (S)
- Diamond-coated (D)
- Additional piece models (T)
- Grip models (G)
- Machinable (M)
- Equipped with vertical V-slot (V)
- Equipped with horizontal V-slot (H) etc.

Recommended installation torque 50..100 Nm

RMS-VS

This model has a vertical V-shape jaw to hold round-shaped workpieces of various sizes.

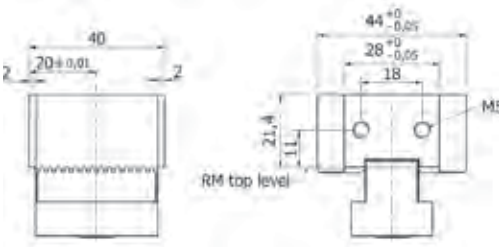
Part Number
RMS-VS



RMS-T

In this stop module the same additional pieces can be used as in D-series low-profile clamps.

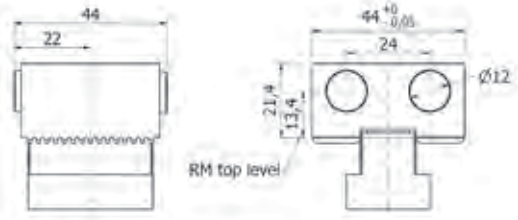
Part Number
RMS-T



RMS-R

This stop type has two round, serrated contact areas which hold both big and small workpieces firmly in the correct position. The accuracy from every serration to the jaw surface is ± 0.25 mm.

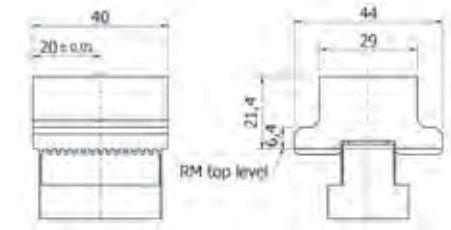
Part Number
RMS-R



RMS-S2

More narrow than RMS-S, about the size of a B-series clamp.

Part Number
RMS-S2



RMS-S

The most common stop is RMS-S, which has two smooth and nitride jaws. It is optimal for the second setup, when OK-VISE clamps are used with full force. Friction level is adequate even for roughing and other types of machining where high forces occur. The accuracy from every serration to the jaw surface is ± 0.01 mm

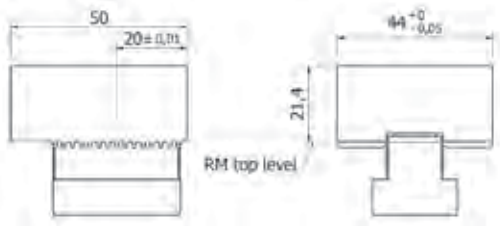
Part Number
RMS-S

Multi-Rail RM Stop Modules (RMS-)

RMS-MS

These are machinable stop models which are especially suitable for machining of complex workpieces, or when extreme accuracy is needed and product-specific jaws are used for machining. One jaw is of the “normal” length, and normally it is smooth. For machining purposes this model is slightly bigger in size.

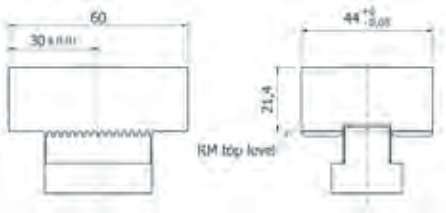
Part Number
RMS-MS



RMS-M

These are machinable stop models which are especially suitable for machining of complex workpieces, or when extreme accuracy is needed and product-specific jaws are used for machining. RMS-M has two extended jaws that are machinable. Furthermore, all combinations can be machined because these models are made of the relatively soft material (HRC 30, not hardened or nitride).

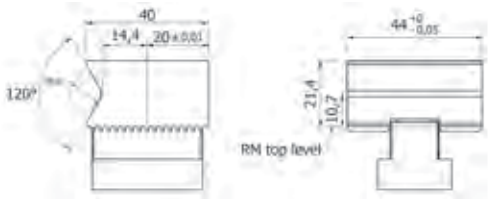
Part Number
RMS-M



RMS-HS

This model has a horizontal V-shape jaw to hold small round-shaped workpieces or bars. RMS-H has two such jaws.

Part Number
RMS-HS



RMS-G

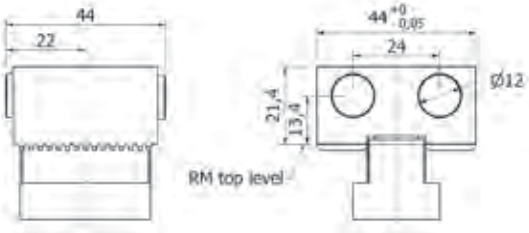
RMS-G is a grip model with two HSS pins that penetrate into the workpiece, leaving tiny marks on it. The friction is much higher than that of using the standard serrated jaw, against soft steel the friction co-efficient factor is up to 0,8.

Part Number
RMS-G

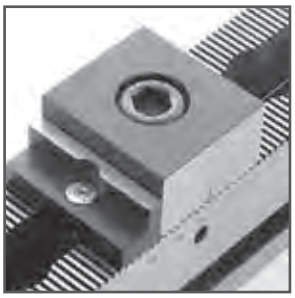
RMS-D

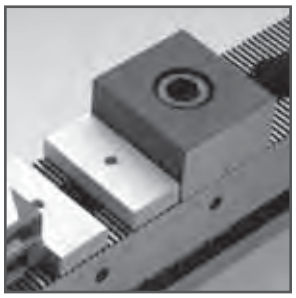
These stop modules has both jaws diamond coated (D). The accuracy from every serration to the jaw surface is ± 0.25 mm.

Part Number
RMS-D



Multi-Rail RM Parallels (RMP-) and Side Guides



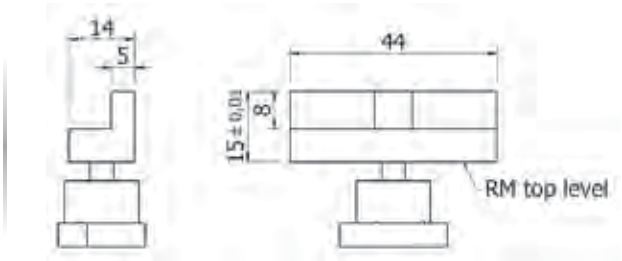


Multi-Rail RM parallels and Side Guides are used to assist in positioning workpiece on the Multi-Rail. Multi-Rail RM parallels are placed on the rail, thus protecting the rail's serration.

RMP-1

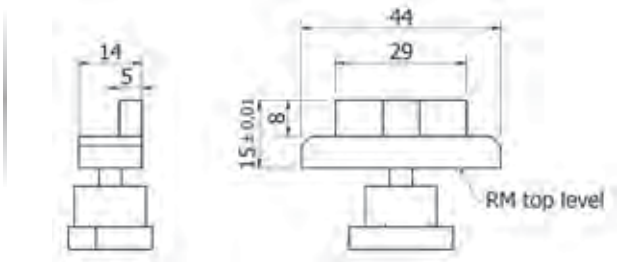
RMP-1 is the most common parallel model.

Part Number
RMP-1



RMP-2

Part Number
RMP-2



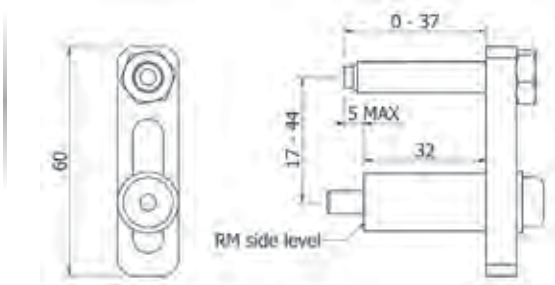
Multi-Rail RM Side guides

Side guides are designed to assist in positioning the workpiece on the Multi-Rail. The workpiece is pressed sideways (as regards the clamping force) against the guide, either manually or using a spring guide.

RMG-1

Side guide offset from the side of the rail is from -5 mm to +30 mm.

Part Number
RMG-1



Multi-Rail RM Clamp Modules (RMC-)

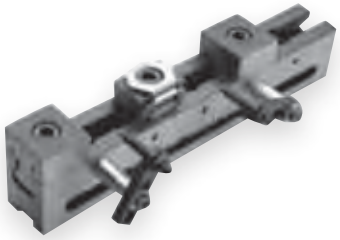
All the jaw types, such as serrated (R), smooth (S), diamond-coated (D), additional piece models (T), grip models (G), self-aligning (B), machinable (M), etc., are suitable for the Multi-Rail RM system.

D-size (12 mm or 1/2” bolt) and B-size (M8 or 5/16” bolt) clamps are most commonly used in the Multi-Rail RM system.

RM Series Clamp	Base Clamp	Description
RMC-BR	BK2-VT	CLAMP MODULE, CLAMP TYPE B, SERRATED
RMC-BS	BK2-VT-S	CLAMP MODULE, CLAMP TYPE B, SMOOTH
RMC-BSR	Special BK2	CLAMP MODULE, CLAMP TYPE B, SMOOTH/SERRATED
RMC-DR	DK2-VT	CLAMP MODULE, CLAMP TYPE D, SERRATED
RMC-DS	DK2-VT-S	CLAMP MODULE, CLAMP TYPE D, SMOOTH
RMC-DSR	DK2-VT-Spl	CLAMP MODULE, CLAMP TYPE D, SMOOTH/SERRATED
RMC-DT	DK2-VT-T	CLAMP MODULE, CLAMP TYPE D, ADDITIONAL PIECE
RMC-DTR	Special DK2	CLAMP MODULE, CLAMP TYPE D, SERRATED, ADDITIONAL PIECE
RMC-DTS	DK2-VT-TS	CLAMP MODULE, CLAMP TYPE D, SMOOTH, ADDITIONAL PIECE

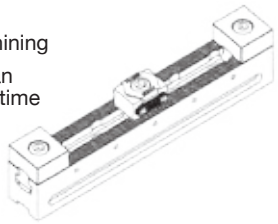
All performance data for RM Series Clamps are the same as the Base Clamp data. See appropriate pages.
Special clamp combinations have the same performance data at the Base Clamp.

RM Application #1 (SRM-GB1)



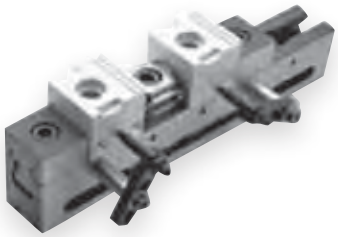
To make selection of the components easier, the Jergens/OK-Vise team has selected some basic sets to enable an easy start with the Multi-Rail system. In the pictures below you can see some solutions done with each set.

- For three-directional machining
- One or two workpieces can be machined at the same time

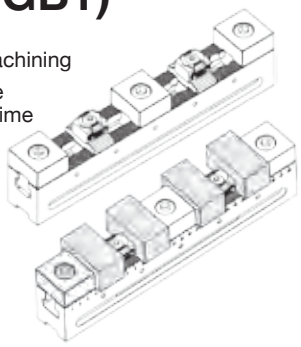


Code	Name	Pcs
RM-300	Multi-Rail Base	1
RMS-S	Stop Module Smooth	2
RMC-DS	Clamp Module D Smooth	1

RM Application #2 (SRM-133GB1)



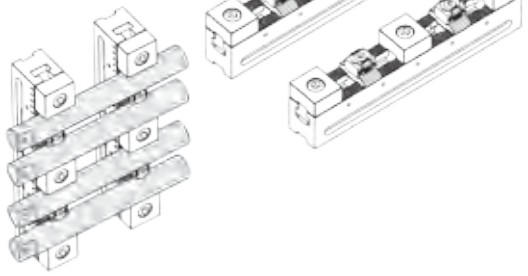
- For three-directional machining
- Four workpieces can be machined at the same time



Code	Name	Pcs
RM-300	Multi-Rail Base	1
RMS-S	Stop Module Smooth	3
RMC-BS	Clamp Module B Smooth	2

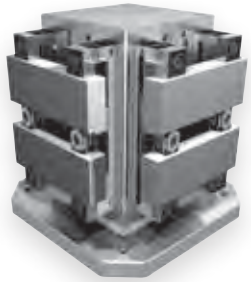
RM Application #3 (SRM-236GB1)

- Two SRM-133GB1 sets
- Also suitable for holding long workpieces



Code	Name	Pcs
RM-300	Multi-Rail Base	2
RMS-S	Stop Module Smooth	6
RMC-BS	Clamp Module B Smooth	4

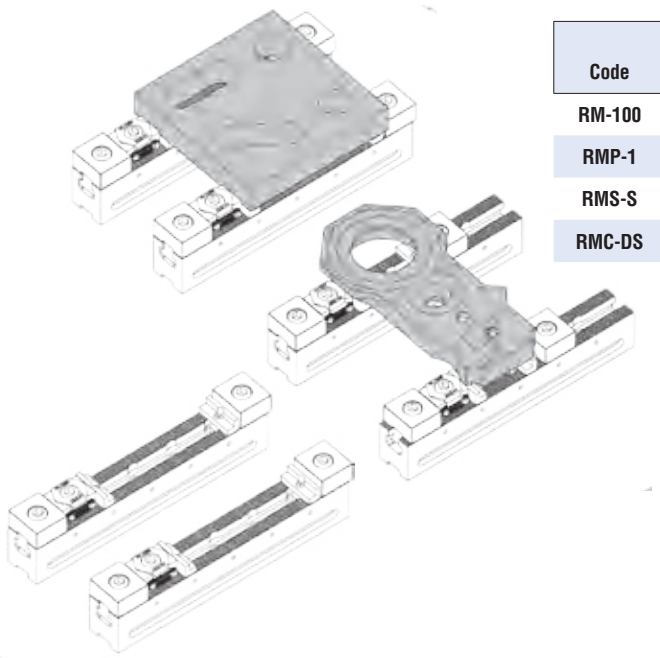
RM Application #4 (SRM-4C4GD1)



- To hold large workpieces

Code	Name	Pcs
RM-100	Multi-Rail Base	2
RM-200	Multi-Rail Base	2
RMC-DS	Clamp Module D Smooth	2
RMS-S	Stop Module Smooth	4

RM Application #5 (SRM-Z101)



Code	Name	Pcs
RM-100	Multi-Rail Base	2
RMP-1	Parallel Block	4
RMS-S	Stop Module Smooth	4
RMC-DS	Clamp Module D Smooth	2

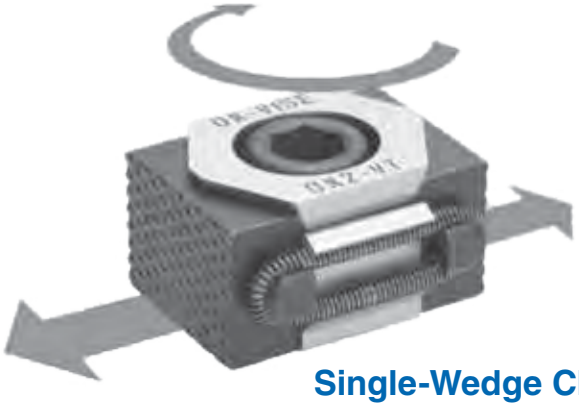
RMP-1	Parallel Block	4

RM Application #11 (SRM-Z108)

Code	Name	Pcs
RM-100	Multi-Rail Base	4
RMS-S	Stop Module Smooth	4
RMC-DS	Clamp Module Smooth	2

Basic Modules

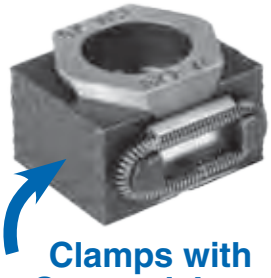


Single-Wedge Clamp

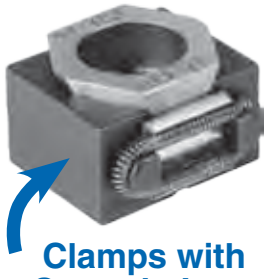
Jergens/OK-Vise low-profile clamps are the core components of our Multi-Rail system. Our low-profile clamps are available with various jaw types. In the Multi-Rail RM system, clamps of sizes D and B can be used.

Multi-Rail RM sets are built using few basic modules:

- Clamp modules
- Stop modules
- Side guides
- Paralles and riser blocks



Clamps with Serrated Jaws



Clamps with Smooth Jaws

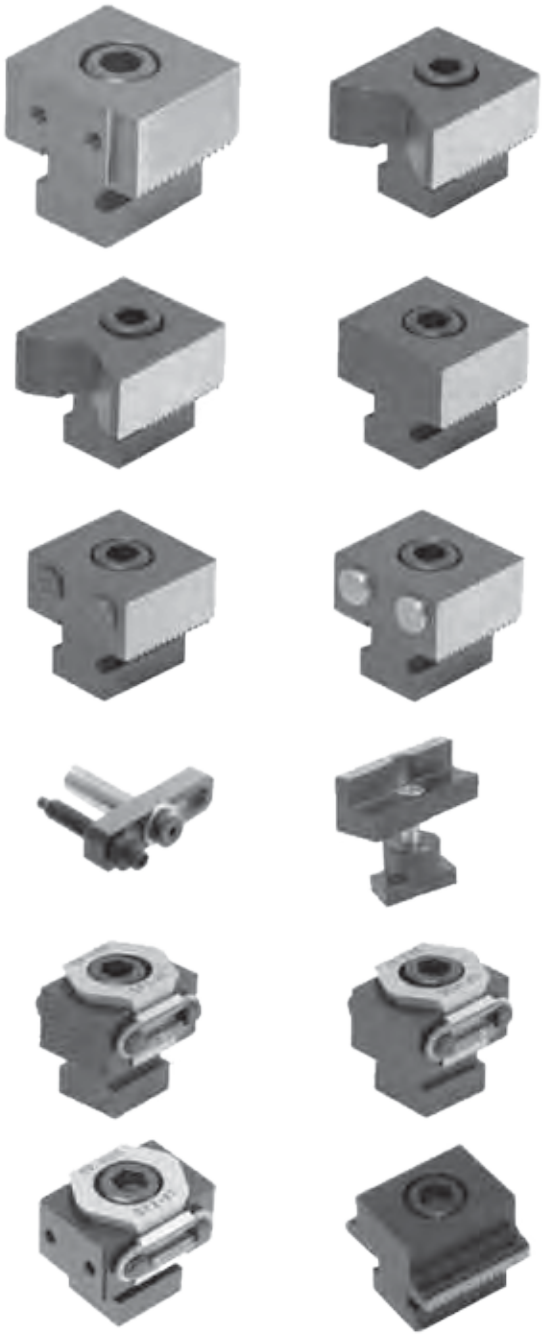
Pull-Down Models

- Double Wedge
- Single Wedge

Clamps with Machinable Jaws

Additional Piece Models

Clamps with Self-Adjustable Jaws



Jergens WORKHOLDING SOLUTIONS GROUP

MULTI-RAIL RH SYSTEM

Jergens® / OK-VISE®
WORKHOLDING CLAMPS AND ACCESSORIES

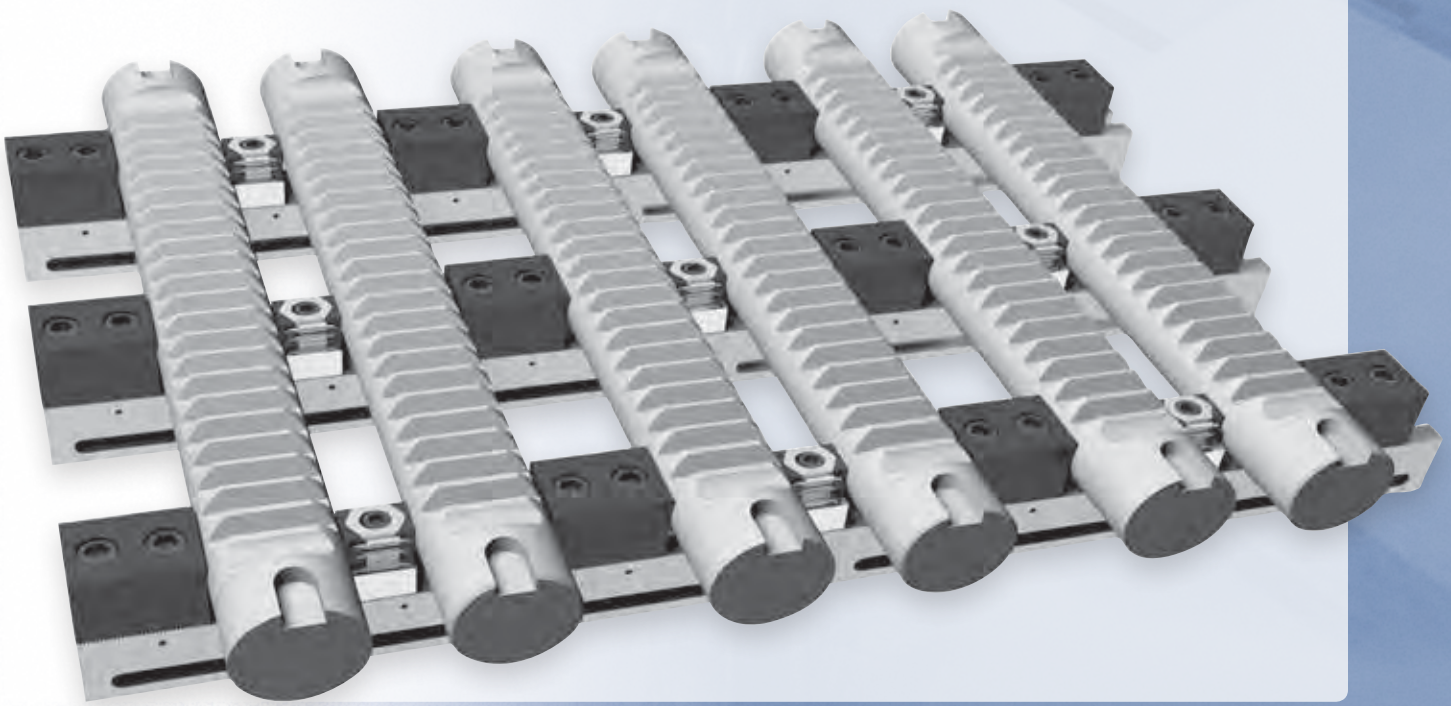
Multi-Rail RH System

Multi-Rail RH is the new generic-purpose fixturing system from Jergens/OK-VISE. Multi-Rail RH is optimal when the clamping force is over 4 tons and also when the work pieces are rather big.

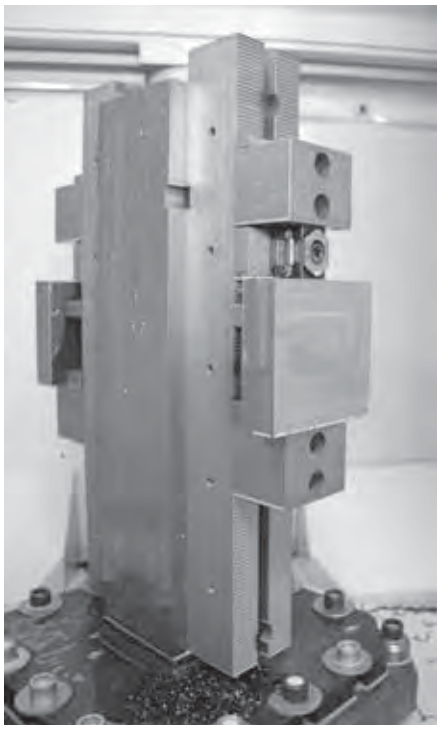
Fixture Sets

To make selection of the components easier, the Jergens/OK-VISE team has created some basic sets to enable an easy start with the Multi-Rail system. Compared to a traditional machine vise, the Multi-Rail RH system offers the following benefits:

- Using the components of the system, even the most challenging workpiece types can be machined.
- All sides of a workpiece can be machined with two setups.
- Multiple workpieces can be clamped on the same area.
- The workpiece is safely fixtured under all circumstances.
- It is also possible to clamp very large work pieces.



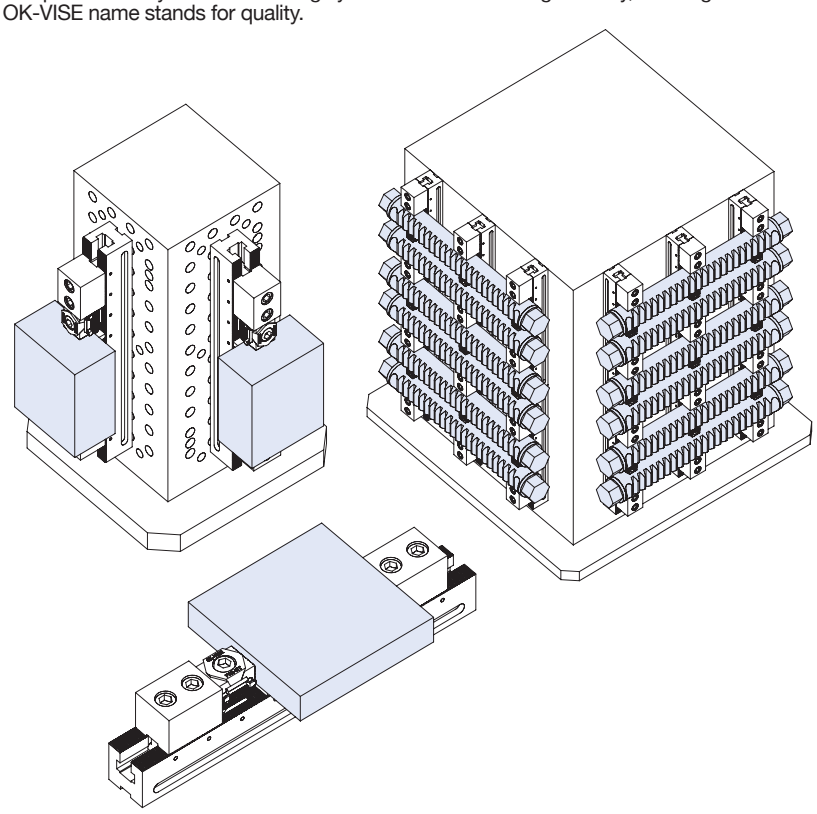
Multi-Rail RH System

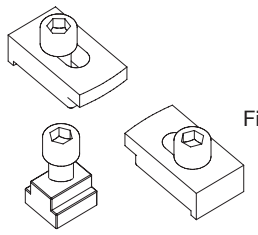


In a modular system all the functions of a fixture are divided into individual modules. This means that when workpiece material, form or size changes, the modules of the fixture can be changed independently of each other. Using a well-chosen collection of basic modules – a set – a huge variety of workpieces can be clamped simply using the same modules.

Jergens/OK-VISE low-profile clamps are the core component of our Multi-Rail system. Our low-profile clamps are available with various jaw types. In the Multi-Rail RH system, clamps of sizes D and F can be used.

The original Jergens/OK-VISE low-profile clamps are known worldwide as a core component of any modern fixturing system. In the machining industry, the Jergens/ OK-VISE name stands for quality.





We also offer installation sets for the most typical platforms like T-slot tables Jergens Fixture Pro System and other Grid Systems.

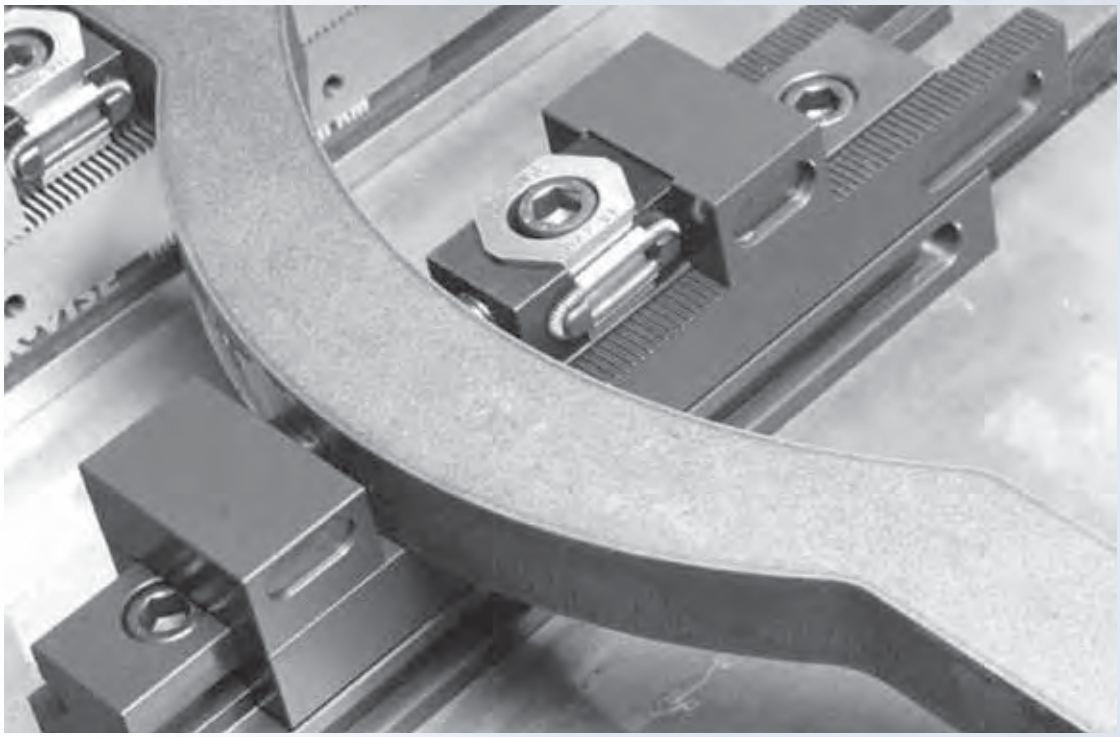
Jergens WORKHOLDING SOLUTIONS GROUP

COMBO-RAIL

Jergens® / OK-VISE®
WORKHOLDING CLAMPS AND ACCESSORIES

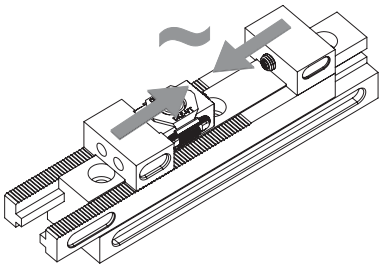
Combo-Rail

Jergens/OK-VISE Combo-Rail is a unique patent-pending design from us.There are several operating modes available: Floating Mode, Centralizing Mode and Machine Vice Mode.



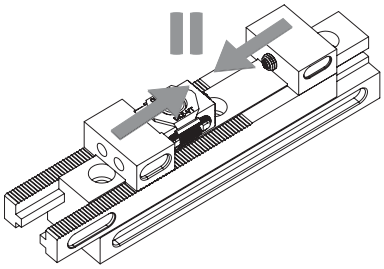
Floating Mode

This is the most fascinating operating mode of the Combo-Rail. Here the fixture adjusts to the place of the workpiece.This is often needed while clamping inaccurate workpieces like castings, forgings or flame cut work pieces.Therefore floating mode installation normally needs positioning with some other means, like two Multi-Rail units, positioning pins, positioning by a robot etc.



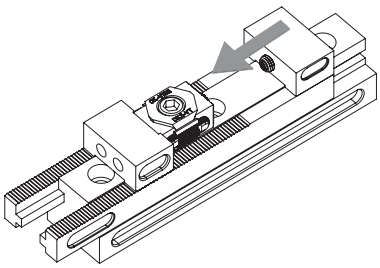
Centralizing Mode

The jaws move synchronously. The center line of a casting or similar workpiece remains in the same place even if the outer dimensions of the workpiece changes. Centralizingmode



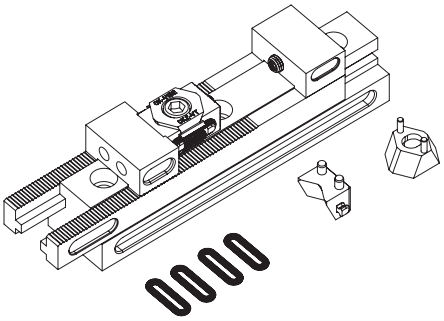
Machine Vice Mode

In this mode the other jaw is fixed to the base Compared to traditional Vises, in this method the ergonomics are radically improved in vertical machining centres



Universal Mode

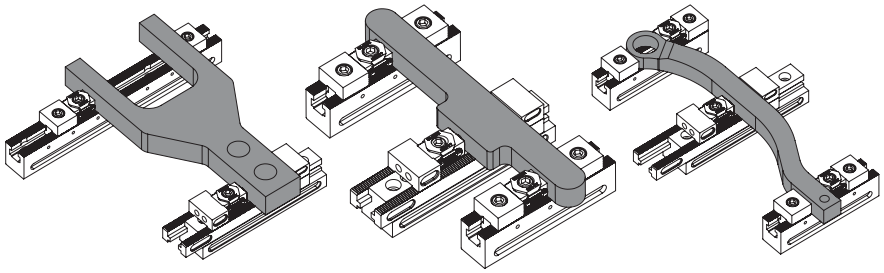
CRH-K250 is a Combo-Rail unit that can be set in all three modes as mentioned before, operating modes by changing the jaw or wedge components (all included). All workpieces from 0 to 120 mm size can be clamped. The base height is 50 mm and total lenght is 250 mm.



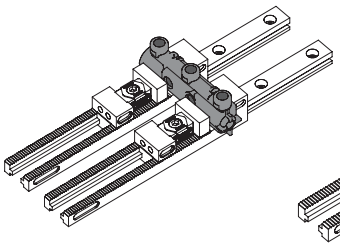
Combo-Rail Applications

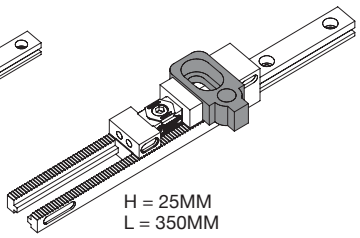
Please notice that the Combo-Rail units can be combined with most of OK-VISE Fixturing Concept components.
Especially combining Combo-Rail units with Jergens/OK-VISE Multi-Rail has been proven to be a versatile combination.

Floating Mode



Centralizing Mode





H = 25MM
L = 350MM

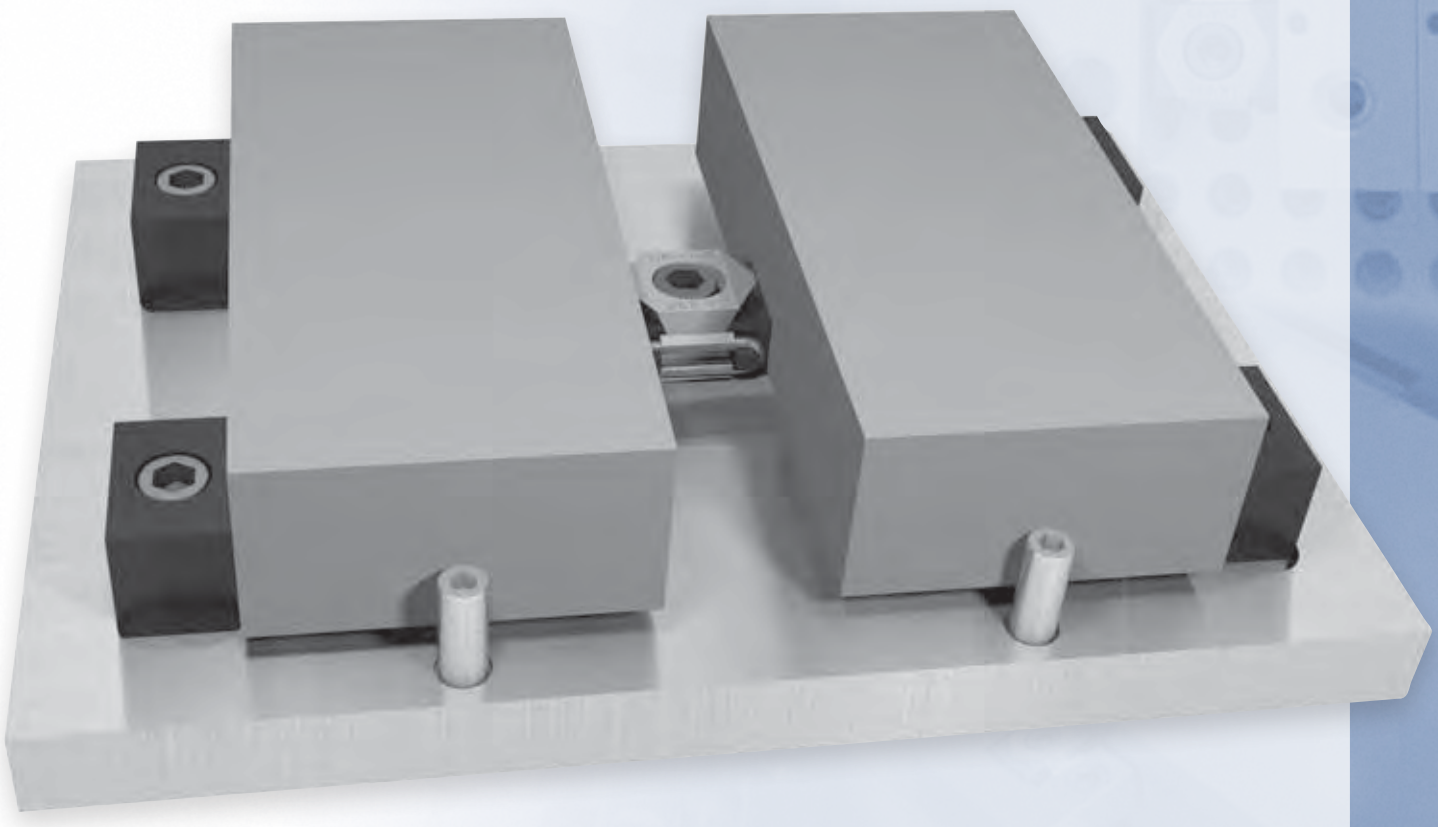
WORKHOLDING SOLUTIONS GROUP

BLANK FIXTURING SYSTEM

Jergens® / OK-VISE®

WORKHOLDING CLAMPS AND ACCESSORIES



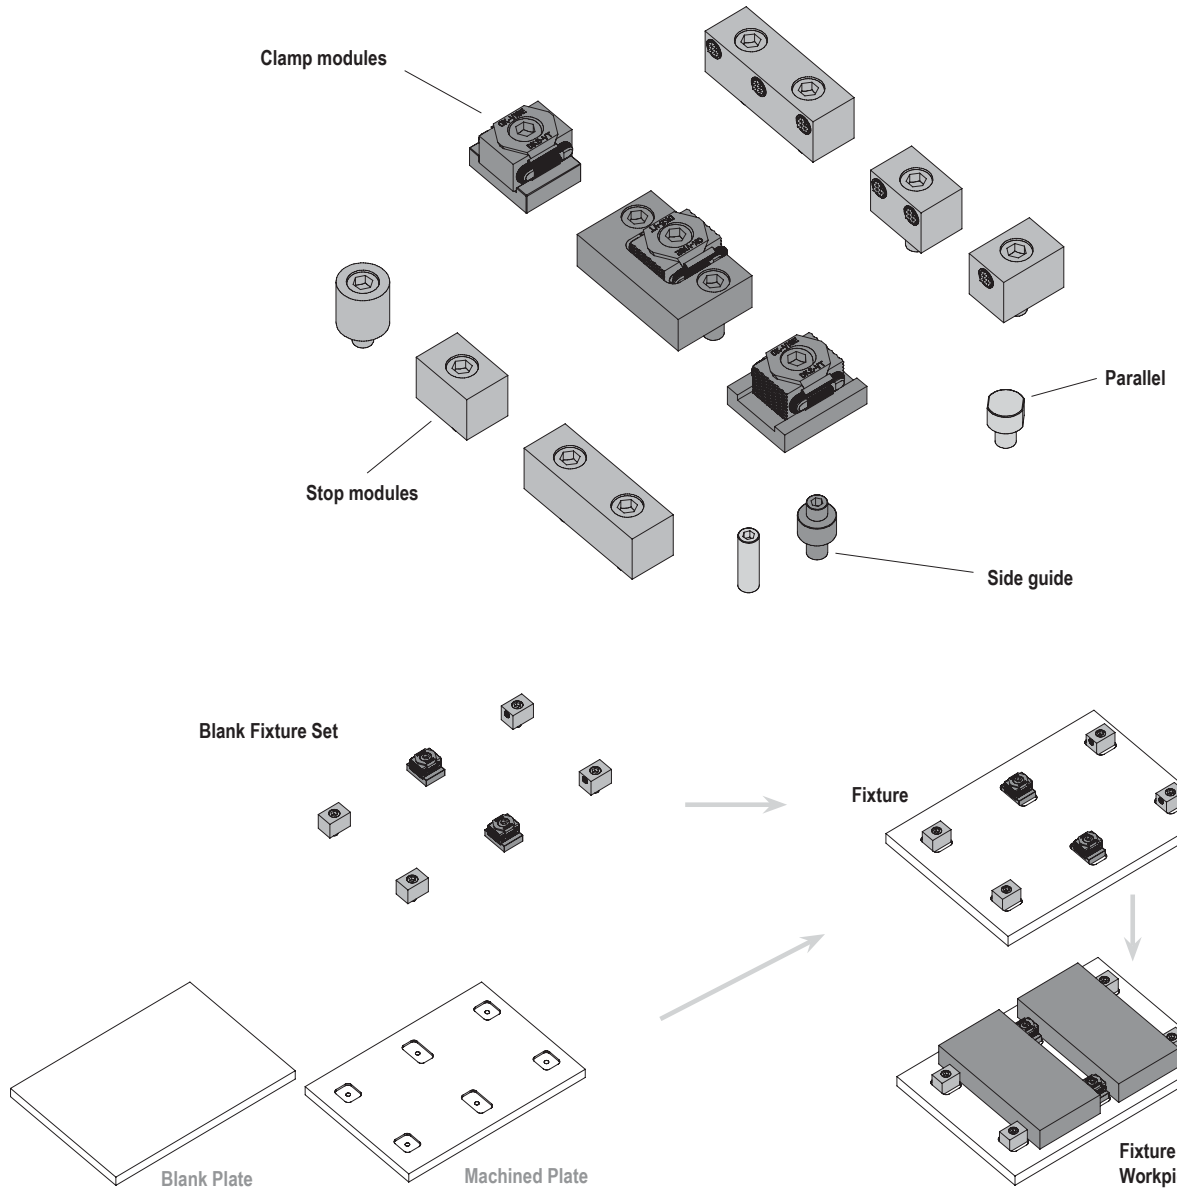
Blank Fixturing System

The Jergens/OK-VISE Blank Fixturing System is designed for cases when dedicated (product-specific) fixtures are needed. This is typical in high-volume production. Blank plates are used as a platform on which to build the fixture. Aluminium and steel blanks are recommended.

In addition to OK-VISE low-profile clamps and bolts, a variety of components are now available. Various clamp modules, stopper modules, side guides and parallels (or riser blocks) are the basic modules of the system. High-friction jaws in stopper modules and clamps ensure reliable clamping when high machining forces are used.

When sensitive contact with the workpiece is a must, then smooth, diamond-surface or contour-machined jaws are optimal. Now designing dedicated fixtures is easier than ever.

Blank Fixturing System Components



Blank Fixturing System – Applications

To make selection of the components easier, the Jergens/OK-VISE team has selected some basic sets to enable an easy start with the Blank system. In the pictures below you can see the solutions done with each set.

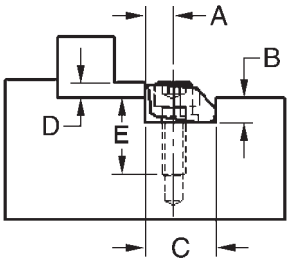
Lo-Profile Micro™ Clamps

Problem: You require a clamping device which can grip low on a work piece, has exceptional horizontal *and* vertical holding force, and can be mounted below the fixture plate surface.

Solution: Jergens new Lo-Profile Micro clamps are the answer!

Material:

- Available in tool steel or brass
- Extraordinary horizontal and vertical force
- Extremely low profile – as low as .075
- Very small foot print
- High resistance to pull-out
- Choose among three sizes with inch or metric screws
- Knife and blunt edge styles



Lo-Profile Micro™ Clamps

Part Number	Description	A	B	C	D*	E	Clamp Width	Screw Size	Torque (ft/lbs)	Max. Holding Force (lbs)	Total Throw	Clamps Per Package

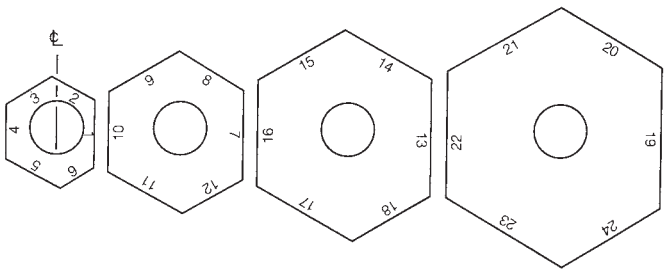
Adjustable Micro™ Clamps

Measured from the centerline, each face of these low profile clamps increases 1mm (.0394) from the smallest to the largest face.

Adjustable Micro Clamps decrease design and set-up times for modular fixtures, work cubes, and standard fixtures. Without changing hole locations, clamping range from 12mm to 35mm can be achieved.

The clamps are available with either smooth or serrated faces which make them ideal for clamping machined parts, castings, and rough cut stock. The clamps work with a cam action, always following the contour of the workpiece for maximum surface contact.



- Cam action
- Low profile
- Available in four sizes
- Heat treated and plated
- Serrated or smooth edges
- Adjustable clamps and stops
- Includes Cam Screw*

Face #	Distance From Center Line	Face #	Distance From Center Line	Face #	Distance From Center Line	Face #	Distance From Center Line

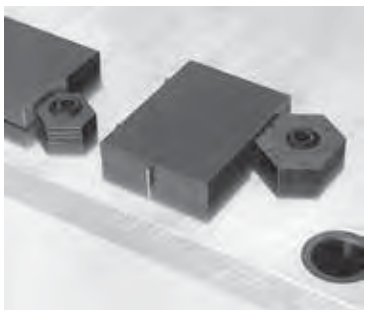
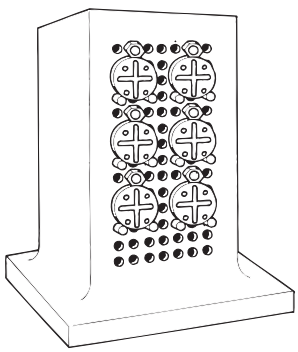
Locking Screw is 1/2-13 for inch sizes and 12M for metric sizes; total distance of movement is .100".



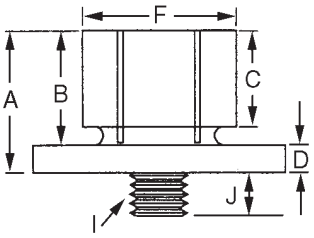


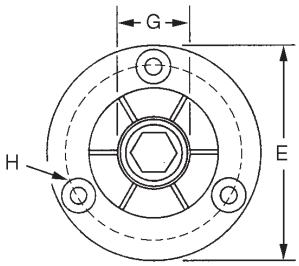
Inch Part Number	Metric Part Number	Description
68601	68651	1-6 smooth
68602	68652	7-12 smooth
68603	68653	13-18 smooth
68604	68654	19-24 smooth
68611	68661	1-6 serrated
68612	68662	7-12 serrated
68613	68663	13-18 serrated
68614	68664	19-24 serrated

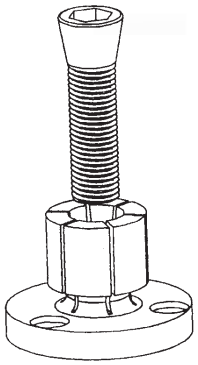
All clamps include a cam screw.
Clamps are 10mm (.394) thick.

Part Number	Thread	Max. Torque Holding Force
68202	Cam Screw 1/2-13	65 Ft/lbs. – 4000 lbs.
68199	Cam Screw M12	88N.M. – 17,800 N.

ID Expansion Clamp







The ID expansion clamp is the ideal way to hold parts on an inside diameter for multiple machining on a vertical or horizontal machining center.

The larger diameter of the clamp is held to a close tolerance for precision locating in a machined pocket on work cubes and fixture plates.

The customer machines the mild steel clamp to match the bore of the part ensuring proper fit. Often times the clamps can be remachined for different size jobs.

- Body Material: Mild Steel
- Low Profile
- Ideal for Secondary Operations on Lathe Parts
- Easily Machined to Size on Lathe or Mill
- Excellent for Palletized Setups
- Allows More Parts Per Workcube or Fixture Plate
- Tighten with Hex Key or Hydraulic Pull Cylinders (Drill clearance hole for longer bolt into hydraulic cylinder)
- Instructions included with each clamp

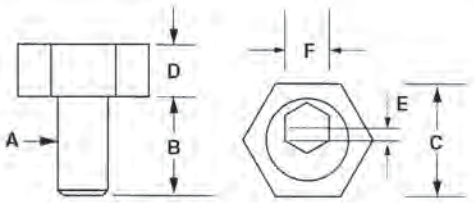
* (3) Mounting Screws Included
* Minimum diameter the "F" dimension can be machined too.

Micro™ Clamps



Jergens Micro™ Clamps feature both high hold down forces and low profiles, which makes them ideal for building fixtures on Ball Lock® fixturing plates. Two simple components make them work: a hardened steel socket cap screw with an offset head and a hexagonal washer. A half turn tightens or loosens the workpiece.

- Low profile makes computer programming easier
- Cam action provides fast, strong clamping
- Small size allows more parts per load
- Requires only a tapped hole in your fixture
- Available in stainless steel
- Note clockwise rotation recomended workpiece stop should be on the right of the Clamp.

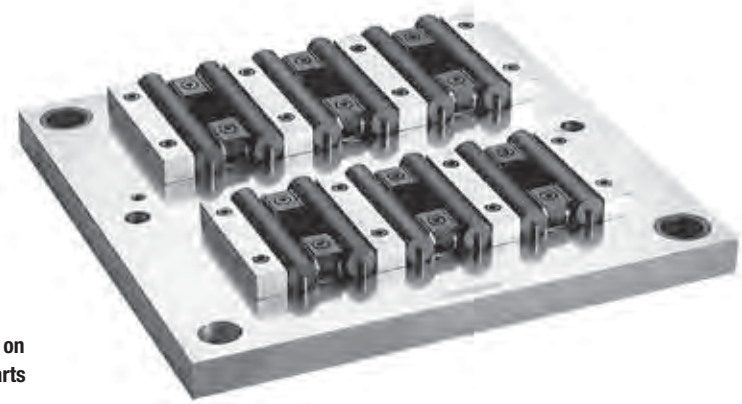
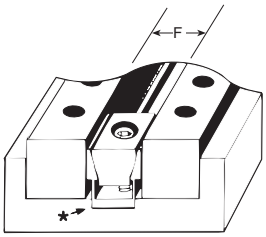
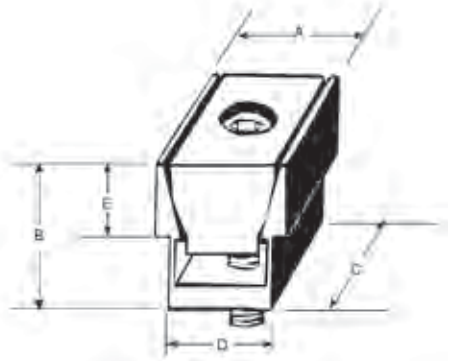
Expanding Micro™ Clamps

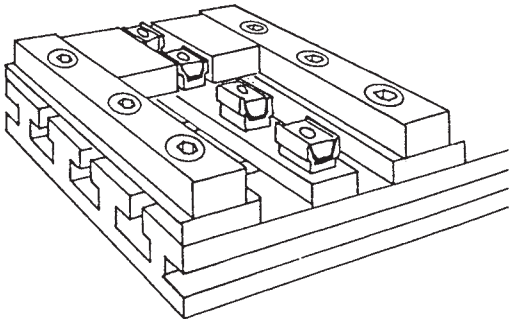


Jergens Expanding Micro Clamps allow you to fixture more parts on your fixture plates. The unique expanding design can hold two parts at once when used with a positive stop.

- Minimizes tool changes
- Holds two parts with equilateral clamping action
- Ideal for clamping flat or round work pieces
- Reduces wasted space
- Aluminum Housing, Steel Wedge







*A shallow slot, a little wider than D dimension, will insure clamp remains in line with workpiece.

†F is the distance needed between workpieces for clamp clearance. Drill and tap mounting hole on the center of F dimension.

Machinable Expanding Micro™ Clamps

The compact Machinable Expanding Micro™ Clamp is available with extra material on the clamping jaw so it can be machined to conform to the shape of your work-piece – enabling you to fixture unusual applications easily. The specially designed steel wedge spreads the clamping force uniformly on both sides of the aluminum channel. Clamps may be ordered with a unique locking plate to make the clamp rigid while machining the jaw to your specifications, without vibration.

- Material: Channel 7075-76 Alumnium
- Mounting Screws Included
- Compact Design
- Allows more parts to be mounted on Fixture

NOTE: Locking plate is used only to machine jaws, remove to clamp workpiece.

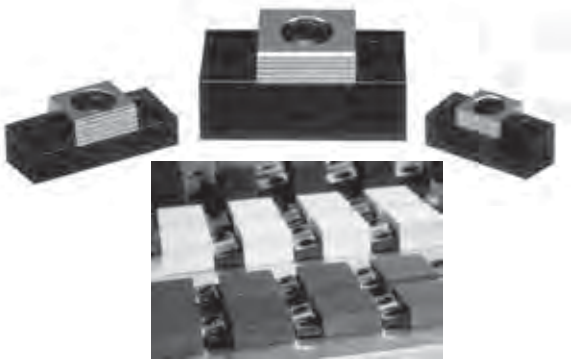
Micro™ Toe Clamps



This cam action fixture clamp provides positive down force while using very little space on the fixture. Workpieces can be clamped in series by using the back surface of a clamp to locate the next workpiece. The hardened steel clamping element has both a smooth surface for machined workpieces and a serrated clamping surface for rougher work. The height of the clamp can be adjusted by milling the slot deeper in the fixture plate.

† "E" is the distance needed between the front of the clamp base and the workpiece.

Micro™ T-Slot Toe Clamps

This clamp is like the Micro Toe Clamp, only it is designed to be used in the T-slots of machine tables. It provides positive down force while maintaining a low profile. The hardened steel clamping element has both a smooth surface for machined work pieces and a serrated clamping surface for rougher work.

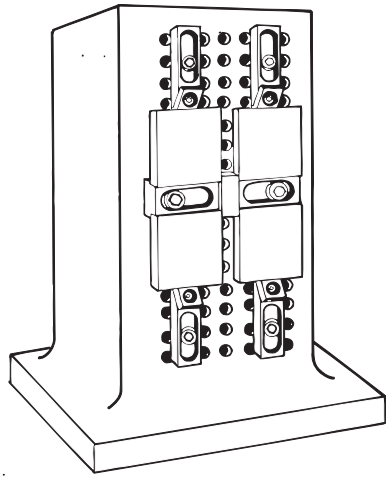
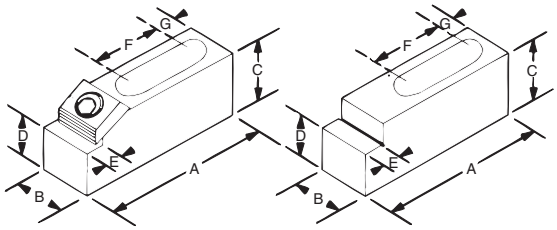
Torque mounting bolt to 110 Ft/Lbs (150 N.m.)

Micro™ Edge Clamps



The Micro Edge Clamp offers increased versatility through its unique elevated clamping abilities.

- Workpiece is elevated for through milling and drilling
- Cam action provides positive holddown force
- Provides flexible set-ups for hard to hold parts
- Works in plates, both with tapped hole layouts or T-slot configurations
- Can be mounted vertically or horizontally
- Built-in stops locate workpiece for repeat positioning
- Larger sizes are ideal for mold shop applications
- Tapered mounting slot prevents movement when clamping pressure is applied
- Hardened steel clamping element, low carbon steel body



Closed slot style

Modular Mini Vise

- Material: C-1018
- Finish: Black Oxide
  Case Hardened 58-62 Rc

Description	Part Number
Fixed Jaw Clamp46711	
Adj. Jaw Clamp	46721
T-Slot Nut	46731

The Jergens Modular Mini Vise provides accurate location and positive holding. The bases are hardened and ground to the same height as Jergens Rest Pads for accurate location. The jaws are serrated and hardened to provide positive holding. These versatile clamps may be used as shown, or the jaws may be reversed to allow the workpiece to rest on the machine table or fixture base. The clamps can be made part of a dedicated fixture by removing the T-nuts and fastening the 3/8-16" cap screws directly to the fixture.

To use the Jergens Modular Mini Vise: position the fixed jaw clamp and tighten all three cap screws to secure the clamp. Position the adjustable clamp and tighten the outside capscrews. Insert the workpiece and tighten the center cap screw. The adjustable jaw will force the workpiece down against the base and over against the fixed jaw clamp.

The 46711 clamp has a fixed jaw for locating.
The 46721 clamp has an adjustable jaw for clamping.
Each clamp is supplied with three 3/8-16" cap screws and three 46731 T-nuts.

Mini Edge Clamps & Stops

Cam Action Clamps

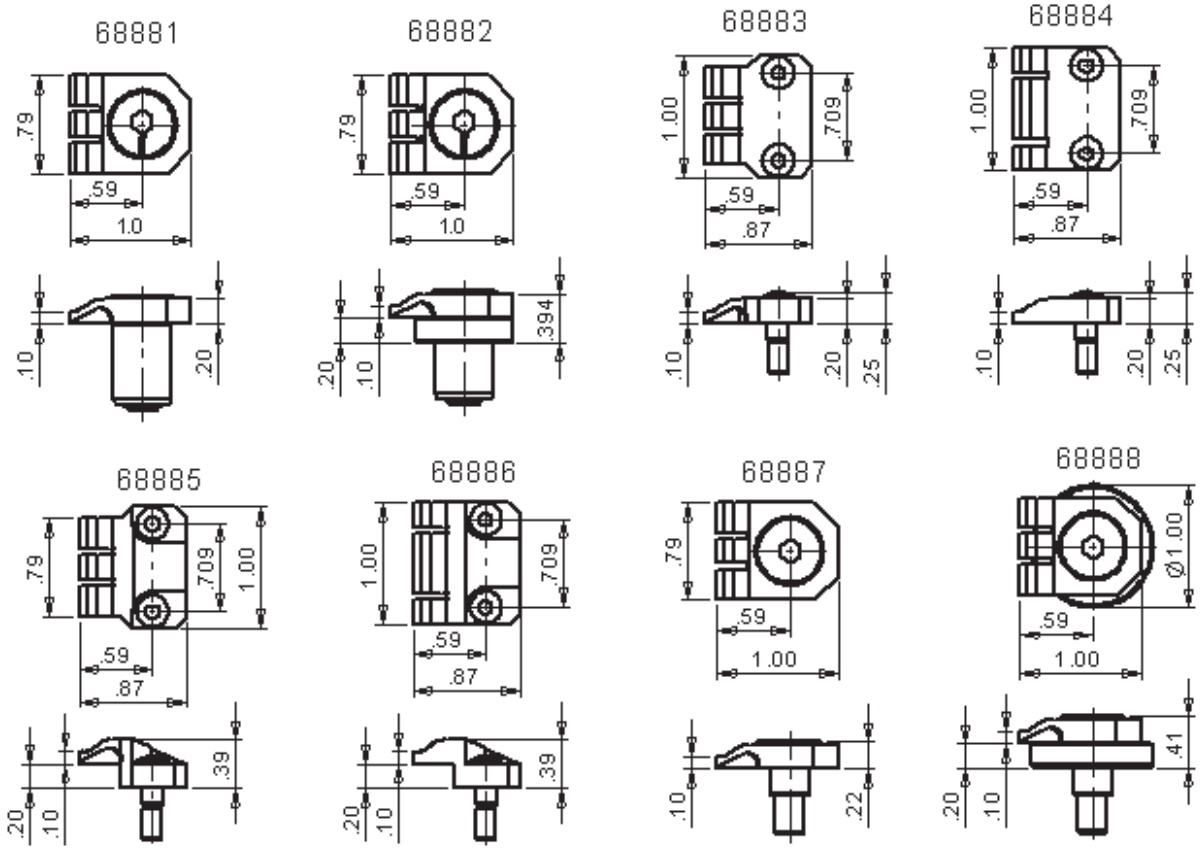
- **Cam Action Clamps - The clamp actuates by a com screw with .047" (1.2mm) of stroke.**

Part Number	Material	Clamp Type	Clamping Height	Max. Torque	Holding Force
68881	Spring Steel	Low Profile Clamp	.1000" (2.5mm)	6.6 ft. lbs. (8.95 Nm)	880lbs. (3900 N)
68882	Spring Steel	Raised Clamp	.300" (2.5mm)	6.6 ft. lbs. (8.95 Nm)	880lbs. (3900 N)

Stops / Locators

- **Stop / Locators - Single Stops are used for pieces over 1.75" (44.5mm) long. Double Stops are used for smaller pieces.**

Part Number	Material	Stop Type	Jaw Height
68883	Spring Steel	Single Stop	.100" (2.5mm)
68884	Spring Steel	Double Stop	.100" (2.5mm)
68885	Spring Steel	Raised Single Stop	.300" (7.5mm)
68886	Spring Steel	Raised Double Stop	.300" (7.5mm)
68887	Spring Steel	Swivel Stop	.100" (2.5mm)
68888	Spring Steel	Raised Swivel Stop	.100" (2.5mm)



We Are Jergens

WORKHOLDING SOLUTIONS

SUPPORT, LOCATE AND HOLD:

From standard components to vises and quick change fixture systems like Ball Lock®, ZPS and Fixture-Pro® Multi-Axis.

SPECIALTY FASTENERS

FASTEN, STRENGTHEN AND SECURE:

From threaded inserts and toggle clamps to Kwik-Lok® Pins.

LIFTING SOLUTIONS

LIFT, TURN AND TRACK:

From chain sling and eye bolts to hoist rings and our proprietary Lift-Check™ hoist rings.

We got our start back in 1942, manufacturing tooling components to help American manufacturers operate quickly and more efficiently. "The Standard Components with the Highest Standards:" This founding philosophy put Jergens on the forefront of the "lean manufacturing" movement before anyone even thought to put those two words together.

In the years since, Jergens has structured its offering to advance the cause of leaner manufacturing, adding products and engineered solutions for an integrated approach to "Manufacturing Efficiency."

You can find Jergens products just about anywhere in the manufacturing environment.
